Seems I recall that Atari's hard drive utilities had a MARKBAD option in
the HDX program. I use ICD software myself, so I haven't had need to look
at Atari's stuff in quite some time therefore this may be mere hallucination
on my part. Worth a look, tho...

ICD's software can do it, but I believe it loses everything on the drive
in the process. This may or may not be true with Atari's software. Hence
I suggest a dependable backup.

UNIXMODE set to "rU" should help, too. Or you have a slash/backslash
problem, then try to add "/" to your UNIXMODE.

Anyway, running MiNTNet without init is not the way to go.

Bye,
Knarf

Unfortunately, Microsoft can't even properly implement their own
"standards"; there's no guarentee your RTF document will be loadable by
any Microsoft product.

Literally anything under NEXTSTEP will be able to handle it though,
probably without any loss of formatting. Strange, isn't it?

4. CD-Recorder on Falcon?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-01 17:35:56 UTC
From: lnonvei@public.srce.hr
Message-ID: <3e6p5s$5kr@nippur.irb.hr>
Source record: 28272

```
Does anyone have CD-Recorder?
-----------------------------
Well, I want to upgrade a FALCON 030 because of sound capabilities he has.
But I am interested in recording CDs with CD ROM RECORDER/PLAYER. Is it
possible with Falcon? Are there any programmes to communicate with this
device? How much does it cost, and where to ask?
Wich CD Recorder is the best? I heared about Philips CDD 521 and Sony
CDW-900E about two years ago....
I also saw some adds about Audio master (Digital audio workstation - S/PDIF
Interface) for Falcon with coaxial in/out, optical in/out and port for
Falcon DSP. This interface is for DAT Recorder.
Is it of any use, 'cause Philips and Sony have SCSI-2 port, and this
interface doesn't (but Falcon has it).

Thanx in advance.

5. Falcon info wanted

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-01 19:08:52 UTC
From: chris@cydrome.demon.co.uk
Message-ID: <788987332snz@cydrome.demon.co.uk>
Source record: 28273

Hi,

I wonder if anyone can tell me the following :-

As far as I know the Falcon is ment to have eight 16bit sound channels, can all these be driven separately and can their outputs be tapped of separately. I.e. can you play eight different sounds simultaneously tapping them off at separate ports?

Also has it got an unrestricted expansion bus (not like the ST with no write line and 'Address error' problems)? With all the address and data lines available.

What type of hard disk and memory chips does it use ?
How flexiable is the 'Apple Talk' from a programming point of view?

I've been unable to find any technical specs. and manuals for this machine, could anyone tell me of any good books (E.g. Atari ST Internals was okay) for the machine, or an FTP site where I can get some information.

Many thanks.

6. Falcon in a Tower...How?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-01 20:49:11 UTC
From: Rob <robo28@delphi.com>
Message-ID: <Ry364Y-.robo28@delphi.com>
Source record: 28274

I would like to put my falcon in a tower case for all the obvious reasons.
But, I plan on doing this myself and I would like to know where I can get some
basic istructions on how to get the ports to extend to the exterior of the
box. I've never seen a Falcon in a box so I have no reference to go from
so if anyone has seen how it's done or know where there is an existing
document detailing placeing a Falcon in a tower then PLEASE let me know...
Muchas Gracias in advance!!!!!
Rob

7. MiNT and UNIX and Falcons...The basics..

I would like to know where I can get a hold of information regarding what is neccessary to setup a "UNIX-like" OS on my Falcon 4mg w/o FPU.. Is this possible with just MiNT? What's X-windows? Where can I get the programs to do 'ls' and other standard stuff with tsch? Someone could make a few bucks if they compiled all this info together and sold it... I'd buy it!!!

What I have so far is the latest MiNT binary and tsch.. I want to do this to help me learn about UNIX and related stuff... Thanks!!

Rob

I've been meaning to get MiNTOS for a while, OTOH I just use:

bg.ttp -o /dev/aux ksh < /dev/aux

instead of login - and I couldn't care less about security! ;-)

The link idea is worth trying though.

> Its a good idea to put all MiNT stuff on minixfs. And its faster too.

This is what I'm moving towards. I have a 60Mb MiNT partition with most
things on. the only TOS directly used by my MiNT setup now is c:\bin linked
as /bin. This is going to change soon.

> > Also has anybody got the ping in pin-00.tgz to work? All I get is:
> > ping: unknown protocol icmp
>
> If thats the one on a.a. yes. IIRC I just used it straight away. Maybe
> your inetd/protocols/services or one of the many other config files
> is wrong?

It was my protocols file. As it had been on a TOS partition the name had
been truncated to protocol. I didn't notice ;-) I wouldn't be surprised
if my remaining NFS problems are due to the same sort of thing.

:-)

That would be fun. What I'm waiting for is drivers for PC style pocket LAN adaptors for MiNT-Net. D-link and various other companies do cheapish solutions. OTOH I will probably get a faster serial card for the PC which will allow at least a 38400 link.

> > My PC running Linux isn't really up to running an X server as it

Yes its enough for a server - but not really for the server and clients. Also I'd prefer to run the server on the machine with the bigger screen - even though its only mono.

> I think so - it can cope with overscanned STFM screens.

Thanks - glad to here this :-)

I remeber doing something like this on HP mini's back in the 70's; not
for the disk but for other periherals. You issue the i/o request as
soon as you know you need it, go and do something else, and when you
need to know the status of the i/o request then you ask. Maybe it's
completed, maybe it's still going on, maybe it failed. Normally you
do NOT just assume it worked.

We used to call this sort of thing Real Programming, and of course we
used FORTRAN. 8-(8->)

>tapping them off at separate ports?

You have 8 or 16 separate channels of audio (like having 8 or 16-voice
sampler), in basic Falcon these are mixed to a stereo output, but
you can get a box (Steinberg/Soundpool FA-8) which gives you 8 separare
analog outputs (so you'll have 8 + 2). There's also a box coming, which
gives you 8 inputs to a Falcon. FDI (Falcon Digital Interface) gives
you optical and coaxial digital (S/PDIF) inputs and outputs, which
let you move data digitally between a DAT or a CD-player and Falcon.
You can also use a DAT as a data streamer if you have FDI and DataDat-
software (AIFF-file streamer software comes with every FDI).
These add-ons work so far only with Cubase Audio Falcon.

IDE (2.5") and SCSI (external). You can use 70ns SIMMs if you get
a card for it.

What communications software? I know by experience that some PC comms have a cheat mode cps rate, that you of course can disconnect if you don't want it. Terminate has +5% as default! I have a USR V34 and have NEVER come up over 3400 CPS.

16. Problems with my 1040STE

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-02 20:46:17 UTC
From: npetrlik@public.srce.hr
Message-ID: <3e9omp$fth@nippur.irb.hr>
Source record: 28285

Hi To All!

Weird things are happening to my STE. One day, whe I switched my STE on, all looks normal - booting, loading the program etc ... But, after 2 hours of work, the bombs appeared. Maybe some bug in the program, or some acc mess the memory ... i thought ... I simply pushed the reset button, and then (to be sure) <Ctrl>+<Alt>+<Right Shift>+<Del> for cold reset. Then, it happened again! (20, 30, and once 80 bombs !!). I switched the computer off for 30-40 seconds, then on ... and then ... no picture, nothing ... i panicked ... and switch him off for couple of hours. Next day, i worked 2-3 hours, and all worked normally (no bombs). As I mainly use a hard disc than a floppy, this "worked normally" is a very relative notion. I needed to format one floppy disc (I'm using FcopyPro and E-Copy). I've set the parameters (in FcopyPro) - nr of tracks: 80 (0-79), nr of sectors: 9. Fcopy starts to format a disc, 79,78,77,76,75... 31,30,29,28,27... and then the message appears: The Floppy Disc Head Has Reached Track 0! I repeated the formatting procedure, but it happens again on the other track. E-Copy do the same thing. (floppy head has reached track 0 ... etc). This 'reaching track 0' happening occasionally (usually after a 1-2 hours of work).
Friend of mine told me that MAYBE the MCU/GLUE chip have some 'bug'. I've look into the computer and discovered that MCU/GLUE chip is soldered (or glued)..
Where is the problem ?
Predator says that the disc drive is good (max. nr of tracks is 84 (00-83), max. step rate 2 ms).
Floppy drive type is Epson.
Also, when I'm scanning a perfectly good disc, Fcopy gives me an error message (on track>75, sometimes 77,78).. off course disc was formatted on this drive.
As I mentioned, this thing with floppy happening from time to time, and the 'bombing' happened 2 days ago (several times) - not program fault for sure ... it happening in every prg ..

Where might be the error ?

Many Thanks.

>> a lockup during a file copy or move. This only happens with my
>> external SCSI drives.......a reset, like you said, is then
>> One thing I can't understand, however, is why if I run a totally clean
>> (no BlowUp software running, but the hardware still in place) do my
>> HDs exhibit the same problems?

Well I think I can safely say that with me the problem completely disappears with Blowup absent and indeed does not appear to be happening to me in 16 colour mode WITH blowup ,at least as far as conditions that would cause lockup in 256 colour at same res. Maybe It could still if I pushed it a bit harder.Would happen everytime in 256 col if I compress my mail areas but seems to be 'safe' in 16 colour. I hope this doesn't mean I have already had the talked about mods done and they don't cure it completely :-(

TG> Yes, they do, esp. in High Colour modes on an RGB monitor. But
TG> these problems do also occur in 256 colours.
>> I too would like an explanation or fix for this problem. I was going

Well with a decent modem they make quite good email/internet terminals - providing of course you are not interested in World Wide Webb.

They also make quite good midi controllers, printer spoolers and dumb terminals.

Alternatively you could try selling it, but the world is awash with 2md hand 1040s. Many people are still using them to great effect - but not many people are *buying* them.

:-)

20. printer problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-03 03:02:23 UTC
From: bseburn@vaxxine.com
Message-ID: <D1t73z.DsG@vaxxine.com>
Source record: 28287

I have what seems to be a wierd problem. I have connected a 4 port auto switching printer switch (got that? :-)) Anyway, whats happening, is I can print from all 4 computers to one BJ200, but after awhile my BBS computer won't print through the auto switcher. All three other computers work fine, but the BBS keeps stopping. The only way to get to print again is to switch ports on the switcher, or re-boot the computer. Switching ports solves the problem, only for a short time, then its back. I thought it was a distance problem, but have it close to this computer, and quite a distance from the others that are working fine. No other computers act this way at anytime. Any ideas???

This set up was working great on a 2 port auto switcher, using the BBS system in question, and one of the others.

Computers used are: 2 1040STe's (4 megs each)
1 Mega2 ST (2 megs)
1 286 clone

I have just tried changing computers to see what happens... but I'm not expecting much of a change.

Thanks in advance Brian

In case you have not read this:

I wrote a patch editor for the Roland JV-1080 which I'd like to share
with you. It runs on all Atari computers, and has a very nice 3d user
interface on the Falcon.
Send me a mail if you want it (it is free, of course :)

The Mintlibs startup code reads the UNIXMODE variable. Only a few bits
of UNIXMODE are implemented, notably the 'root' directory concept (so
you can say '/' is really U:\) but check the startup code source for
more details.

Sounds like the right approach - forget about opening an AES window
though, they are too slow, you could run out of windows, and the combo
box is modal anyway.

>UNIXMODE set to "rU" should help, too. Or you have a slash/backslash
>problem, then try to add "/" to your UNIXMODE.

Has anybody else had problems with lharc and stzip when using this
unixmode? They seem to need *all* access to be done through u: drive
if this unixmode is set. Ie. if my current directory is c:/test/
(eg. when using lha/zip with something that isn't 100% MiNT / Unix)
and I try eg. 'lha a test.lzh *.c', lha doesn't find the files...

>Anyway, running MiNTNet without init is not the way to go.

Well, what if I just want to use sockets locally... After all,
they are supposed to be faster than pipes :-).

So what about 1280*1024*16 under blowup on F030 or 1024*768*256 (I know,
that someone have written drivers for color modes, and they will works
under blowup since mono version works).

Mac has the same problem, however F030 is quite new product so the
applications for it are new too. Then what would be a problem to
recompile it to PPC?!?

> 2) ST-compatible video (ie, like the ST, STe, TT, Falcon) would slow
> the processor to a crawl; if you use incompatible video, you lose all
> those annoying programs that try to hit the video directly

Its not a problem at all. Almost all new stuff on F030 uses video
correctly becouse of some new modes so there could be brand new modes
with the old ones for compatibility like on F030.

: program fault for sure ... it happening in every prg ..

: Where might be the error ?

The first thing to do when you have a problem that occurs in that way is
to make sure all chips are properly socketed, and all cables
are connected.
A friend of mine, who by the way worked as a serviceman at Atari, almost
always started "repairing" atari-computers by simply lifting it up a few
centimeters above the table, and let it go.
The chock from the impact usually corrected the problem.
So, open up your computer again, and push all socketed chips back in place.
(Will also have the effect that oxide on the pins will wear off, and that
is really the most likely reason for your problem)

Good luck!

Regards, Tommy

30. Music on the Falcon

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-03 17:10:00 UTC
From: magnus.kollberg@f0.n200.z2.ct.se

Source record: 28203

Hello all Falcon users!!

I know that many out there are loking for some good music programs for their Falcons. It have been some talk about a program from Griff (T.D.S.M) that would be able to play midi files. I just wanted to make you aware of that it already exist a similar program that can a hole lot more!! The program is called EPSS and is from UNIT 17 from Sweden (you may have heard of the from the ST(E) demo scene). This little marvellous program can play midi (*.MID) files with sampled sounds on any ATARI computer with DMA sound (STE, TT and Falcon computers). The only thing now is that it dosn't use 16 bit sound on the Falcon or the DSP. I have been in contact to the distributer (Copson DATA) of the program and he says that if there is enough interest, there may be a Falcon specific version that would use the DSP and have 16 bit sound. So what are we waiting for? Say what you want and we maybe get it!

I havn't said the best part yet! If you are a Cubase user or Notator, you can use the program in the backround of the sequenser and it will work like a sample module!! Yes, you don't need to buy this expensive sound modules or samplers to make music. Your computer will do all the work (sequensing and sample playing) it self!!

All we have to do now is to make them do a Falcon specific version! (I think that some of the coders are the same who did ZERO-X so they sure know how to do it).

If they don't maybe Griff can! I'm not sure what his T.D.S.M. can do, but I don't think that it is going to be able to work in conjunction with a sequenser and to use your own sounds, or maybe it will!?

I take on my self to take some from the readme file and place it here.
A demo version is avalible on most BBS and have in mind that this is on a standard 8 MHz STE!

EPSS and Atomic Man by Unit Seventeen and Copson DATA

Release 2

In a somewhat different way than our other sound-demos, Unit Seventeen presents you EPSS and the song Atomic Man.

This demo is allowed to be freely spread as long as all the files listed in the end of this text are included on the disk or in the

archive.

The song is made by Gem Two of Unit Seventeen and uses a betaversion
of our own sound system EPSS which features following:

* 8 channel polyphony (depends on loaded sounddriver, 16 on the TT)
* 25 kHz effective replay frequency (depends on loaded sounddriver)
* Independent volumes and pitch on each sound
* Independent stereo-panning of each sound
* Variable looping of each sound
* Unlimited samplelength
* Maximum 256 sounds in one patch
* Maximum 128 different sounds on every MIDI-channel
* Velocity Variant Filter Emulation, VVFE, to achive filereffects
* Subtones, make new sounds of existing samples with different parameters
* Used integrated with your favourite sequencer
* EPSS Export Driver for MROS(R) to be used with all MROS(R) based sequencers
* Uses external sound-drivers which can support different hardware
* Use the drivers in your own programs or demos for playing the songs
* MIDI-In, Out and Thru
* Replay possible from MID-files without any sequencer loaded
* Integrated sample and sound editor
* Direct loading of samples from Roland S-50-discs
* GEM Multi-Window environment compatible with MultiTOS and Falcon
* Runs both as Program or ACCessory

...and much more...

Hi !

My friend have an STE with 1MB,
and one day his STE recognised only 1/2 MB.
The diagnose was that the other 1/2 MB
(two 256K SIMMs) are burned..
What is the cause of that ?
Is this because of overheating, is
the transformer board bad ?
Any other possibilities ?

And one more question: Is it possible
to put PC SIMMs into 1040STE, and how ?

Thanx.

Because the PPC is an *entirely* _different_ cpu. If it were that easy as you
naively believe, why are so little applications available as PPC-native
binary? 68k's and PPC's are not binary compatible. A simple re-compilation
wouldn't be enough.

The 68k-series used in MAC's and Atari's are compatible on the cpu-part. The
difference is in the hardware (bus, video, sound) around it. These differences
can be worked around, using OS-calls properly.

>> 3) Linux would be the only native PowerPC software available; there are

>The answer is the same as for 1)

From what I've heard, the folx doing the Linux-PPC port do have all sorts of
problems. This version is far from running. And Linux 68k-binaries are not
compatible to PPC-Linux as well.

In a word - performance.

A Falcon running in either mode you suggest absolutly *crawls* in
comparison to a TT, even running in TT-Hi.

Also as people have mentioned around here - there can be SCSI timing
problems when running in very hi res blowup modes on a Falcon.

IMHO the Falcon is seriously underpowered for this sort of work. The main
thing its got going for it is features. There is not much a Falcon *can't*
do, its just that it can't do all that many things *really* well.

If you need hires colour modes then a TT can only do 640x480x16colour before
you need to buy a video card for it. OTOH I think I can live with
X in mono only. I can always use my PC if I *really* need colour.

:-)

Roland.

Well now I have found the delay fix...

To get rid of the 3 second ICD boot delay with ICD booter 6.5.5.
set this veriable to a small number..

Make a copy of the ICDBOOT.SYS file, and have a look
at bytes at offset B4-B5 ie, at the start of the file, they are 02 58,
this is = to 3 seconds, they use the 200hz system counter, change this
to say 00 01 will give you no delay, don't put a 00 00 as this could cause
problems and very long delays, as the counter could have just ticked over,
and there is no checking for this...

For 1/2 second delay use 00 64, a count of one = .005 seconds....

This feature is not in the 6.2.0 version of the booter, but there is a patch
program to fix that called ICD_PSU....

ICD Booter 6.5.5. is I think the current version....

Me too! I'm trying to install Linux/680x0 on my Falcon using my external
SCSI drives and the timeout problems are driving my nuts.

Maybe it's just the current version of Linux I'm running, but it's definitely
NOT happy communicating to my external drives.

43. Use of gem16 library?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-04 05:06:32 UTC
From: paul@vega.ame.arizona.edu
Message-ID: <3edaco$ak0@news.CCIT.Arizona.EDU>
Source record: 28210

I'm doing a little graphics using gcc. I'm using coordinates defined by 16-bit (normally "short int") numbers. But the "gem" library has all the vdi calls using "int"s (ie, 32-bit). The "gem16" library, I suppose, has all the calls using 16-bit values (as is "normal" for the vdi calls). Thus, it seemed to me, I should send my short ints to the gem16 library. However, I get the following problems: (1) I get lots of "incompatible type" errors, since all the header files have ints and not short ints. (2) Nothing works; vdi calls produce no resuls (while calls to the gem library using full ints all over do work).

So what am I doing wrong? I'm pretty sure I sould be using gem16, but I apparently don't know how.

Thanks!

If you want to use the 16 bit version of a library you must compile
your program with -mshort so that `int' is assumed to have 16 bits.
Otherwise all parameters are passed with at least 32 bits, even those
of type short int, but the called function expect them to be passed on
16 bit boundary.

On my TT it gives no timeout problems, maybe you can set the Falcon back to
the 'no-Blowup' mode or make it switchable ?

BTW, do you know how to use a CD-ROM with Linux ? It detects the drive at
Linux bootup (calls it 'sr0') but afterwards there is no /dev/sr0

I also noticed (and used...) that you can even mount BGM partitions as
'msdos' under Linux, that made things a lot easier in 'un-tar-ing'.

Greetings, and happy new year.

We're clearing out our lab at present. We've had a MicroVitec Cub 895 colour monitor knocking around for years (it was bought for use with a VME graphics card years ago). Unfortunately the manual has gone awol. I'd like to know if its possible to get this monitor to work, either in medium of hi-res, on my STFM. It has what looks like a standard PC graphics connector (9-pin D-type).

Is anyone using one of these on an ST? Any harm in trying to connect it to my Ladbroke ST-VGA convertor box?

Cheers, e-mail or a CC when following up would be appreciated.

I just got home and noticed my SVGA to ST adaptor has a 15-pin connector
at the monitor end. Anyway, I have an ST to 9-pin D-type of the correct sex
so I'll bring the monitor home and try it later in the week, unless someone
tells me its a waste of time in the meantime.

When I ported CBZONE I ran into this problem.

I was using 32bit INTs for almost everything (no -mshort). Now despite my
GEM documentation saying that all parameters should be WORDS (16bit), the
GEM libraries seem to be 32bit. So what I did was to define a label GEMSIZE
which gets set to 'int' for GCC and 'short' for Lattice. I then defined
all GEM parameters as type GEMSIZE.

Anyway it was *something* like that! If you want to look at the code I did,
its at:

micros.hensa.ac.uk
micros/atari/tos/p/p002/cbzone10.zip

Now the *other* thing you could try is put a -mshort on your compile line.
This will make all references to int be 16bit (like short) and should link
in GEM16 as well. This didn't wrk for me as the code assumed 32bit ints.

:-)

Roland.

>Mac has the same problem, however F030 is quite new product so the
>applications for it are new too. Then what would be a problem to
>recompile it to PPC?!?

Because the PPC is an *entirely* _different_ cpu. If it were that easy as you
naively believe, why are so little applications available as PPC-native
binary? 68k's and PPC's are not binary compatible. A simple re-compilation
wouldn't be enough.

In theory, you are wrong. A recompile should be the only thing required.
In practice, you are correct. Mostly this is due to developers doing
clever things that violate good programming rules and to the OS provider
for making incompatiblities in the "toolbox" library support.

If you gave me a GEM/AES/BIOS etc. set of libraries and a PPC Atari, I
should be able to recompile with a PPC compiler and run Atari code.
In theory :-)

Several years past I routinely wrote code that compiled and executed
unchanged on VAX, SUN, IBM, and AT&T 3B machines. It is possible.

I assume that the reason it takes time to get PPC native software out
is logistical. Buy a machine, learn a new compiler, establish another
development environment, test, test, test, test, test...

Zmodem can continue transfering from a interrupted upload. Say if the upload
was interrupted halfway, you have half the file at the destination. Now if you
try to upload the same file again, it knows that half of it been done, and so
it will transfer from where it stop with a message like "repositioning file at
ofset ****". The **** is the offset to begin appending the file. This is
suppose to save time. To avoid this just delete the half transfered file or
rename the file to transfer.

HTH.

---8<---------- Cut here ----------->8---

Section 1 Introduction - This section contains information on the M68000 family programming model, register description, integer and floating-point data formats and data types as well as information on format organization

in registers and memory. Also included is a table of notational conventions used throughout this manual.

Section 2 Addressing Capabilities - This section presents detailed information on the format of instructions and their various bit field definitions and possible encodings. Also included are descriptions of addressing modes and other data structuress used by the M68000 family.

Section 3 Instruction Set Summary - This section includes extensive information on the instruction set (grouped by operational category), descriptions of the operands used by instructions, and guidelines on how to use the instructions.

Section 4 Integer Instructions - This section provides all integer instruction (non-privileged) operations described in detail and organized alphabetically.

Section 5 Floating-Point Instructions - This section provides all non-privileged floating-point instruction operations described in detailed and organized alphabetically.

Section 6 Supervisor (Privileged) Instructions - This section provides all privileged instruction operationss described in detail and organised alphabetically.

Section 7 CPU32 Instructions - This section provides alll CPU32 instruction operations described in detail and organized alphabetically.

Section 8 Instruction Format Summary - This section contains all the M68000 instruction formats (binary), arranged by opcode.

Appendix A Processor Instruction Summary - This section contains a table listing of all the M68000 family instructions arranged alphabetically and cross-referenced to show which instructions are applicable to which processors. Each processor is also listed with a table of the instructions and the addressing modes that apply to that processor.

Appendix B Exception Processing Reference - This section presents information on exception vector assignments for the M68000 family and illustrations of exception stack frames and floating-point stack frames.

Appendix C S-Record Format - This section provides detailed information on the S-Record format.

That depends on the horizontal and vertical frequencies the monitor is capable
of. The sync is the problem here.

Some older monitors (e. g. NEC 3D) were able to do that. Newer models don't
even sync to ST-high.

I don't have the exact ST-frequencies handy at the moment, sorry.

Unless the file makes extensive use of 680x0 assembly, there is no reason
why a re-compile won't work (assuming the same OS calls on both processors)
Esp. if it's code written in C. Sure, maybe there are some optimization
issues and sometimes system calls don't work exactly they way they used
to but problems like this can be fixed easily (or at least *mostly* easily :)

Ex:
FAT Binary mac programs. Most of these are just the same code recompiled
in two versions and plopped into the same application file.

>The 68k-series used in MAC's and Atari's are compatible on the cpu-part. The
>difference is in the hardware (bus, video, sound) around it. These differences
>can be worked around, using OS-calls properly.
[snip]
>
>From what I've heard, the folx doing the Linux-PPC port do have all sorts of
>problems. This version is far from running. And Linux 68k-binaries are not
>compatible to PPC-Linux as well.

When you're talking about UNIX ports like Linux, the kernal is usually
just recompiled for the machine you're on (mostly because of the cpu).
All the other junk in the machine (sound, video, etc.) is all handled
through drivers. Porting a kernal is not hard, it's writing the drivers
that takes most of the programming time (at least that's what the
guys in the MacBSD docs said :)

The idea is that if you're running Linux on a Mac, Falcon, PC Box, etc.
that when you distribute programs they run on all of them so long as
what you're doing doesn't involve special hardware. How do you accomplish
this? You distribute source and it gets compiled on those machines.
Alot of stuff is distributed this way. Although, I will say that I have
seen commecial stuff and that is often times distributed in binary format
but more often than not you'll find these are for the "big boys" SUNs or DECs

running "regular" versions of UNIX.

I don't know what the future of a PPC Falcon would be but it seems to me
that if it's going to be running only Linux then it would just be one
of many different UNIX boxes with alot of interesting hardware.

The kernel doesn't create any entries in /dev automagically. Use mknod to
create the ones you need, or run the /dev/MAKEDEV script. It is possible
that you already have a /dev/scd0 with the correct major and minor numbers
(the name can be chosen arbitrarily, but under Linux scd? or sr? are by
convention used for CD-ROM drivers).

> I also noticed (and used...) that you can even mount BGM partitions as
> 'msdos' under Linux, that made things a lot easier in 'un-tar-ing'.

M68k-linux can support (depending on your kernel-configuration) filesystems
of type affs, ext2, minix, msdos and iso9660.

Its probably either an analogue or digital RGB monitor. The former will
be fine for low/medium - whereas the latter has a limitied number of
colours.

> Is anyone using one of these on an ST? Any harm in trying to connect
> it to my Ladbroke ST-VGA convertor box?

Probably not - though surely your box will have 15pin mini D connectors?

BTW MicroVitec are on 0274 390011

:-)

>with Blowup absent and indeed does not appear to be happening to me in 16
>colour mode WITH blowup ,at least as far as conditions that would cause lockup

I get the errors even in 16 colour mode with BlowUP, but then the
resolution is 1008x608, which might have something to do with it...
I've been running in a BlowUP monochrome mode now for a couple of months
and I've experienced problems a couple of times anyway.

My computer has never locked up during a file copy, but I've lost a few
files and sometimes programs have been corrupted while loading.

If anyone wants to see how common the error really is, I can email the
code for the short test program I wrote.

What is happening when a file is read is that the SCSI DMA skips a word
here and there, presumably because of clashes with the video DMA.
The fault frequency would go down drastically if every file was loaded
twice in the same place, since the errors are very unlikely to occur
at the same addresses.
If anyone has the source code for a HD device driver, this could easily
be implemented and we could use that until we get our machines fixed.

Write errors probably occur in the same way, but I've not tested that.

>an idea exactly what the fix is .Hardware or software ?

I've seen a simple hardware schematic somewhere.
Are there really different switches for different board revisions?
It won't be easy to find a knowledgable Atari repair center in Sweden. :-(

The short answer is no.

The long answer is:

Maybe if you are lucky in a few months time. Until then MiNT, MiNT-Net and Lynx is the only Atari WWW solution that I know of. I agree its hard to set up - I haven't achieved it yet.

:-(

Roland.

PS WWW isn't going to be much fun on an ST anyway.

73. [Falcon] Timing of sound DMA interrupts?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-06 05:11:18 UTC
From: mpark@u.washington.edu
Message-ID: <3eijdm$ltd@nntp1.u.washington.edu>
Source record: 28237

I am trying to use the interrupt (Timer A) that the Falcon030
can generate when playing sounds via DMA. According to both
the Falcon docs and the _Compendium_, the interrupt should
occur at the *end* of the frame; however, my experience is
that it occurs at the *beginning* of the frame. To all Falcon
programmers out there, I ask: When does the interrupt occur
on your machine? Am I doing something wrong? (Interrupts at
the end of frames would be a lot more convenient for my purposes)

> wouldn't be enough.

Uh - actually, yes, it would. Re-compilation = different binary. If you have a C program that runs on 68K machines, you can re-compile it with a PowerPC compiler and then it runs on a PowerPC machine.

Now, the PowerMac is not quite that simple. In order to allow PowerPC code to run concurrently with 68K code in emulation, including having much of the OS still written in 68K code, Apple had to make a number of changes in the way that PowerPC programs do function calls. Thus, if you want to recompile your old Mac program to be PowerMac native, it's often more of a job than a simple recompilation - some modification of code is usually necessary. (Especially if you have to switch which compiler you're using.)

> From what I've heard, the folx doing the Linux-PPC port do have all sorts of

The people doing the Linux-PPC port are having problems getting information on the low-level hardware of the current PowerMac line, as I understand it. They will probably have an easier job writing it for CHRP and/or PREP (the two standardized PowerPC platform specs, with CHRP being the descendant of PREP and more likely to be the long-term standard).

75. Help! CGA for ST?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-06 06:22:16 UTC
From: galen@maple.circa.ufl.edu
Message-ID: <3einio$b2j@no-names.nerdc.ufl.edu>
Source record: 28238

I've recently accuired an IBM CGA color monitor, and if it's possible, I would
like to hook it up to my 1040 ST so that I can see if it even works! (If it doe
s'nt, I'll fix it, because I really want to use it.) Now, the 1040 ST has that w
eird monitor port, with the round 13 pin DIN plug, and I need either an adapter
to hook the monitor up, or, an ATARI 1040 ST Owners' Manual (not a user's guide,
as I already have one.), or, a schematic of the 1040 ST. Download or tell me we
re to get it. If someone even knows what the pinning of that monitor port is, would be more
than I could ask for. I'm new to newsgroups so could you send me an Email and or title your
response "Jay!" if possible. Thanks alot...
Have a great New Year......

76. problem with gdb

My gdb cannot correctly debug c++ programs compiled with gcc. It writes
that it can't understand multiple inheritance. So the problem is while
inspecting classes with multiple inheritances - only the first
inheritance is visible then for gdb. Is there anybody, who know abot any
newer version of gdb (without this problem)?

thanx for any help,

Simon.

Newer version of gdb (since 4.0) use the BFD (Binary File Description)
library as an interface to the executable format. But nobody has yet
written the support for the native GEMDOS (st-out) format, which would
be required for gdb to read the executable (even if there is a
separate symbol file in a.out format). The changes to gdb 3.6 (which
is the base for the current gdb for atari) to support the st-out
format are a gross hack that does not work for BFD. That's why we
currently must live with the limitations of gdb for atari.

From: csstsme@brunel.ac.uk
Message-ID: <3ejbei$48f@izar.brunel.ac.uk>
Source record: 28141

The 68000 User Mannual is much more useful than the 68000 Programmers Reference Manual if you're programming the original chip (not the 68030 say). It covers all sorts of low level stuff like instruction times and bus timing which are handy if you're writing time critical code (if you're not why are you using asm???). It has a very comprehensive coverage of the instructions set and details oddities such as extra "unnecessary" bus cycles used by some instructions.

It's actually published by one of the big academic publishers; I bought my copy from Dillons - you should be able to order a copy from your college bookshop.

Title : The LightHouse Tower - STFM upgrade by a user
Keywords: TOWER UPGRADE HARDWARE ST FALCON

The Light House Tower - a user's do it yourself upgrade for the STFM. This article has been written to show what your system can be made into with the aid of the LIGHTHOUSE Tower case and keyboard kit. Available for STFM, STE, Mega and Falcon computers.

The Light House Tower - A User's Do it yourself upgrade!
^^
This article has been written to show what your system could be made into with the aid of the LIGHTHOUSE Towersystem.

What is it?
^^^^^^^^^^^
I will assume here you all know what a tower case is. The main tower comprises of three metal component's, The first is the internal frame. Imagine a suitcase with it's lid turned over and the front removed. You have a top and bottom, hinged at the back. The mother board fit's into the base section while

floppies, Hard Drives, Extra PSU's and interfaces go in the top section. Next we have the two outer Metal shell's. These give the tower it's 'case' and makes it look like a proper tower. Lastly is the front plastic pannel which contain's the holes for the floppy drive cover's, which are cut to the required size. There is also a hole for the Power switch and reset button. Other bit's include a multi-board which control's the floppies, reset switch and thermo sensor. A replacement power switch and reset button are included along with a keyboard connection socket. A bag of nut's, bolt's and other such item's is included along with the tower's own rubber feet. Also included is the keyboard kit, this comprises of a metal base shell for the computers original keyboard to sit into, a small curcuit board, a plastic cover and the essential rubber feet!. Also included is a cable to connect the keyboard to the tower system.

Who's it from and how much.
^^^^^^^^^^^^^^^^^^^^^^^^^^^

In England the Tower is available from:
System Solutions, Windsor Business Centre, Building 2,
Vansittart Estate, Vansittart Road, Windsor, Berkshire, SL4 1SE,
UK.
TEL: 01753 832212 FAX: 01753 830344 (U.K. Dialing Codes!!!)

The manufacturer:
LIGHTHOUSE, A&G Sexton GMBH, Riedstr. 2, 7100 Heilbronn.
TEL: 071 31/9 57 20 FAX: 95 72 34
(If the above mean's nothing to you then join the club.)

The Price's vary for each system's requirements.
The STFM Tower Cost's L200, but a Falcon Tower is slightly less.

The Clause and comment's.
^^^^^^^^^^^^^^^^^^^^^^^^^

This is not an instruction manual or in any part designed to help in the construction of the above tower. The writer takes no responsibility and is not liable for anyone attempting to follow these documents. This is for information only and no part herein may be published as instruction's or a guide for assemble. I am a qualified electrical engineer and have used standard static provention to ensure the long life of my I.C's.

There is one MAJOR problem with the Tower kit. It's the Manual, What can I say realy, It's in German (I think!). I can't read another language so the manual was no use to me. You will probably find the same. However there are plenty of drawing's included and these help a great deal in the assembly of the tower. System solution's will give telephone help or will make your system if you send you computer to them. (Cost's more!)

I could not afford the expense of sending them my ST and also I had a few of my own item's to fit, so took a few day's off work

and built the system with music and solitude. It took me 5 day's to build the complete system and a few week's to iron out all the bug's in the sound system. Find out more about that later.

The Original STFM. (Before dissassembly.)
^^

Inside the STFM we have the mother board, Tos 1.02/2.06, 4Mb Memory, High density controller module, one High density drive, T28 accelerator board, my personal mono/stereo bit's, PSU and the keyboard. An external high density drive was connected and took it's power and HD signal from the ST. (Added power port)

The Dissassembly.
^^^^^^^^^^^^^^^^^

My first task was to check I had all the bit's with the new tower case. Then a hour or so looking at the diagram's in the manual, the text was no good to me. Once I had and idea of what went were and how, I started to dissassemble my STFM......
...... O.k. we have all the internal's of the ST safely on the table ready for reassembly.

The Keyboard.
^^^^^^^^^^^^

The original keyboard is used to give a PC like free moving keyboard. The mouse and joystick still connect to it. The keyboard metal base had a interface PCB put into it for the connecting cable from the tower. The keyboard was pluged into the PCB and the plastic cover placed over the top. This was screwed together and the feet stuck on. This is the easy part of the kit.

The Main Tower.
^^^^^^^^^^^^^^^ (M-B = Multi-Board.)

First the stand off bolt's were put into the base of the tower system and the mother board mounted on to these. Once the mother board was securely in place other connection's could be made.

The M-B was screwed into place where the internal floppy would normally sit. The power and ribbon cable were connected to this. The reset button was fitted at the front (The old one is left on the mother board.) It's wires were lead back to the M-B at the back. A wire was soldered near the original reset switch and was lead back to the M-B. The M-B can hold the computer for an extended reset on power up to enable a hard disk to start up.

The power supply was fitted into it's normal place after having the power switch removed and some connection block's attacked to the wires. The new power switch was inserted at the front of the case and the wires lead back to the connector block's and connected accordingly. A new metal cover was bolted above the PSU. The thermo sensor was attached to the metal above the PSU and it's wires lead back to the M-B. It's accompanying LED was wired across to the front and fitted. The M-B had all the wires

connected to it. The thermo sensor not only light's the LED when the system get's to hot, but will also switch on up to 4 fan's to cool the system down and will then switch them off again. Like the reset this is variable.

The floppy Drives were mounted in the Top of the case on stand off mount's and a power cable and ribbon cable connected between each and the M-B. To get drive B working I needed to solder a wire onto the Yamaha chip. However I could not do this as I have the high density driver module attached, but I did get the connection in the end. This wire connect's to the M-B. If you do add two drives make shore BOTH drives have the jumper set to '0'.

The keyboard socket was bolted into place next to the cartridge slot and it's wires taken across the mother board to the keyboard plug on the mother board. An earth wire was attached under a bolt holding the mother board down.

The T28 and Tos 2.06 have a switching capablility, one for 28Mhz/8Mhz, one for the cache and the Tos for 1.02 and 2.06. An LED was wired from the T28 to the front pannel to see when we are operating in 28Mhz mode, the cache work's on the fly so can be switched at will. As the front panel comes off I needed a way of connecting the switched with the ability of separating them from the system. Also I have my extra special sound system.

The Sound System.
^^^^^^^^^^^^^^^^
What is it? Well, what I did was:
I removed all three sound channel's from the mother board and connected them to some ribbon cable. The switches were also connected to this ribbon cable. I used 25 way ribbon cable and a male and female low profile 25 way 'D' connector's. This mean's the mother board and front plastic panel could be disconnected easily.

The three channel's were wired to the front panel and through a switch, resistor and capacitor network which takes all three channel's and makes them mono for sampled sound's and put's channel A on the left, B on both and C on the right. This makes a faked stereo and chip music sound's great! The switch makes the change from mono to stereo and stereo to mono.

So in my boxes of bit's I found an old walkman PCB and 3 band graphic equalizer. The sensitive input's had to be grounded and the left and right were connected in the next stage of the amplifier. The output was connected to a large stereo jack on the front panel. (A lot of cutting to get the volume control, 3 band graphic, switch and jack was needed in the 3rd spare bay cover. The jack is a switching type. If you plug into it, it will disconnect the next stage. The next stage went back down the

ribbon cable and terminated in a left and right speaker din. Two 2Watt speaker's were connected and the ground lines and +5Volt's for the amp were wired accordingly.

There we have it a sound system that gives mono digital samples and stereo chip music. There is one hell of a difference when playing games, the music sound's alive and the graphic enables me to wind up the bass in those MOD files. Let's groove!!!!!!!!!

Finishing the system.
^^^^^^^^^^^^^^^^^^^^

The mother board is in place, all extra's have been connected, the front panel can be connected at will and the power supply and floppies are installed. Let's make it look like a tower. First I had the fun of putting about 20 little sprung nut's into square holes in the side of the internal frame. Once done the outer base section was found and the internal frame lowered into it and bolted together. A check to see that all was well was done and testing could start.

Connecting the power, video and keyboard left me fealing like I had missed a cable or two. Power up time. Apart from drive B not wanting to worked all was well. The High density module worked, the Toses worked, The T28 changed modes. Getting the sound system just right did take me a few week's.

To finish the system the top shell was bolted on (After I powered it down.) then the front panel was connected and slotted into place. Last of all was to stick on it's feet and there we have it a completed tower system. Plenty of room inside for a hard disk of two and other extras. An expensive upgrade? Yes, But worth every penny in my view. Hope you have enjoyed reading this and hay, get a tower get some space!

Hi,

Is there a good ATARI ST emulator for MSDOS on an anonymous FTP site.

My configuration : 486DX2 66 / 4 MB
510 HD
SVGA

Thanks
Jan Rooijackers

I've never heard about a freeware one, but I'd also be interested in it.
Anyway you can order GEMULATOR (I can't remind who's selling it) that sounds really great and compatible, with some interesting improvements such as using (S)VGA resolutions with Atari GEM.

Despite it's a software emulation, it runs as fast as a Mega STE on Dx2-66, but I heard there were some troubles with hard disk management.

Actually, slight mistake above.....

All flavours of Linux68K are supposed to be binary compatible - a binary compiled on a Falcon should run on the Mac, or the Amiga without any need to re-compile, so no requirement for a source distribution if you don't mind restricting your program to Linux68K users.

Small point, but important.

Craig.

84. Xvt terminal for MiNT+X11R5

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-06 16:34:50 UTC
From: Craig Graham <Craig.Graham@ncl.ac.uk>
Message-ID: <3ejrfa$48b@whitbeck.ncl.ac.uk>
Source record: 28153
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.programmer

I've ported the Xvt xterm replacement to X11R5 for MiNT.

It's up & running, and you can run one copy (it takes about 1/3 of the memory an xterm requires) but I still have a few problems:

1) You can only start xvt from an xterm window, if you start it direct from twm, the Xserver hangs.

2) You can only run one copy of xvt, when you try to run another you get a 'cann't get a pty' message.

But, it does work to an extent & is very stable (the problems above are the only ones).

Any suggestions to fix the above appreciated (I'll be uploading a source/ binary distribution RSN).

Thanks to Andreas Kirschbaum <ank@rbg.informatik.th-darmstadt.de> for telling me about the stack size fix, all the problems I had with xvt crashing went away as soon as I ran 'fixstk 10000' over the executable....

Craig.

>
> I don't have the exact ST-frequencies handy at the moment, sorry.

You need a horizontal freq that will go down to 15kHz to do low-res. Mid-res
and hi-res are both 30kHz horizontal. Vertical needs to be from 50Hz (lo + mid)
to 72Hz (hi-res).

I had one SVGA monitor working fine on my ST, but haven't been so successful
with my current one - partly because it won't sync down to 15kHz.

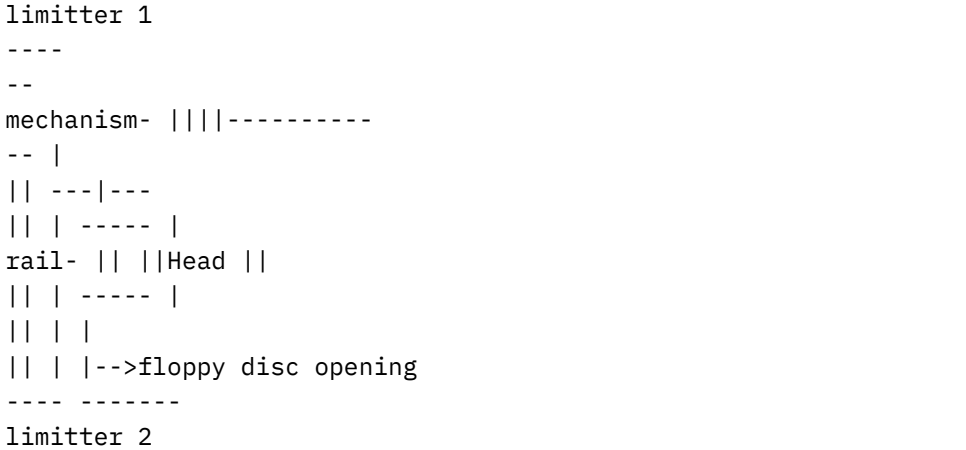
86. Problems With Floppy Drive



Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-07 02:34:49 UTC
From: npetrlik@public.srce.hr
Message-ID: <3ekuk9$kif@nippur.irb.hr>
Source record: 28155

Hi To All !

I'll try to explain my problem:

My floppy drive acts a little bit strange. When I want to format floppy disc with for expl. Fcopy (80 tracks, 9 sectors) it happens this:
-Fcopy, like the other popular formatters format a disc from the last track to the first track - backwards (in my example from track 79 to track 0)
-Fcopy starts formatting: 79,78,77...10,9,8,7,6...and then Alert Box appears: "Floppy Head Has Reached Track 0"
-My drive can physically format a disc to max. 84 tracks (00-83)
-Now, I've set format parameters to 84 tracks (00-83), 9 sectors. Before that, I've opened the floppy drive completely, and start to watch the head moving. The head's normal position is on track 0. The head mechanism is moving along small rail (I don't know the exact word for this) which have two limitters. First limitter (limitter 1) is for track 0, and the second (limitter 2) is for the last track (track 83).

The Ilustration:

-when Fcopy starts formatting (with parameters 84 tracks (00-83), 9 sectors) the mechanism darts forward to limitter 2. As I say, the limitter 2 should be limitting the mechanism position for the last track (83). Logically, the mechanism must drive to the track 83 (to the position where, actually, is the limitter 2). But, the mechanism drives to the position few tracks before limitter 2, and HERE IS THE PROBLEM.

Floppy head started on a wrong track!

Is this is a mistake of a floppy disc, or a controller's mistake?
...or could be something worse ?

87. GCC cross-comp on Solaris 5.3 ???

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-07 06:28:05 UTC
From: paul@vega.ame.arizona.edu
Message-ID: <3elc9l$qqh@news.CCIT.Arizona.EDU>
Source record: 28156

A few months ago I compiled a cross-compiler for Atari on a Sun Sparc ELC
running SunOS 4.1.3, using gcc 2.2.2 (with the gcc258s.zoo diffs, etc).
This works fine.

Since then we compiled gcc 2.5.8 on our Sparc 10 running Solaris 5.3, so
I thought I'd put the cross compiler on that machine. But following the
same procedure, it goes only this far:

```
vega> make -f Makefile.cross
/usr/local/bin/gcc -DCROSSDIR=\"/home/usr/paul/gcc_tt\" -O -g -DCROSSATARI=1 -I./config
-I. -c -DSTANDARD_EXEC_PREFIX=\"/home/usr/paul/gcc_tt/lib/gcc-\" \
-DDEFAULT_TARGET_MACHINE=\"atariST\" gcc.c
gcc.c: In function `do_spec_1':
gcc.c:2885: warning: assignment makes pointer from integer without a cast
/usr/local/bin/gcc -DCROSSDIR=\"/home/usr/paul/gcc_tt\" -O -g -DCROSSATARI=1 -I./config
-I. -c version.c
/usr/local/bin/gcc -DCROSSDIR=\"/home/usr/paul/gcc_tt\" -O -g -DCROSSATARI=1 -I./config
-I. -c obstack.c
/usr/local/bin/gcc -DCROSSDIR=\"/home/usr/paul/gcc_tt\" -O -g -DCROSSATARI=1 -I./config
-I. -o gccnew gcc.o version.o obstack.o
Undefined first referenced
symbol in file
bzero gcc.o
bcopy gcc.o
index gcc.o
ld: fatal: Symbol referencing errors. No output written to gccnew
*** Error code 1
make: Fatal error: Command failed for target `gcc'
```

But it still compiles fine on the ELC. bzero and bcopy and "old, non-ansi"
functions that I could substitute for, but I don't know about index.
These are in the -lc library on the ELC, but I can't find them anywhere
on the Sparc 10. But since gcc compiled there in the first place, there
must be some way to get around this.

Has anyone else had (or not had) this problem on a simlar machine?
Has anyone got it to work?

-thanks

-Paul Harris @ @

Title : New Branch Always price list, Gemulator $99.95!
Keywords: XFORMER GEMULATOR EMULATOR BRANCH ALWAYS MIHOCKA PRICES DEALERS

This is the current price list for Branch Always Software, effective July 1, 1994. Contains an international dealer list of Gemulator 3.02 dealers, new $99.95 Gemulator pricing, and product information on Gemulator 3.02, PC Xformer 2.0, and PC Xformer 3.0. Atari 8-bit and Atari ST emulation for MS-DOS and Windows has never been so easy or so inexpensive!

For immediate release. July 1, 1994.

THE COMPLETE ATARI EMULATOR LINE FOR MS-DOS, WINDOWS, AND OS/2 BASED PCs

- Gemulator 3.02 - 32-bit Atari ST Emulator

- PC Xformer 2.0 - 16-bit Atari 400/800 Emulator

- PC Xformer 3.0 - 32-bit Atari 800XL/130XE Emulator

- updated dealer list and prices

For years, Branch Always Software has been developing Atari 8-bit and Atari ST related software and hardware that has been both innovative and inexpensive. 5 years ago this summer we released Quick ST, the

screen accelerator that made the Atari ST faster for thousands of users. 6 years ago today we released ST Xformer II, the Atari 8-bit emulator for the Atari ST that was the grand daddy of our new PC Xformer, and 10 summers ago founder Darek Mihocka published his first Atari 8-bit program in Antic magazine. How time flies!

So to celebrate, Branch Always Software today announces the release of our FREE "PC Xformer 2.0" Atari 8-bit emulator for DOS compatible PCs, and a new $99.95 price on our "Gemulator" Atari ST emulator, almost a 50% savings.

Through these emulators, Atari users can reliably keep using their Atari software into the next century, without worrying about finding replacement parts or expensive hardware upgrades to keep their machines operating, while at the same time being able to use popular PC software, all on the same computer!

This once and for all answers the question "Why would I spend $200 on an Atari ST emulator when I can buy a used Atari ST for $100?" (Answer: it runs faster, gives you more memory, more disk space, and better graphics than a used ST, runs Atari 8-bit programs as well, and now costs only $99.95!)

Price and dealer list

Our current price list, effective July 1, 1994 and valid through September 30, 1994, is below. All prices are in U.S. dollars. Prices outside of the U.S. may be slightly higher due to higher shipping costs and duties.

Gemulator 3.02 - 32-bit Atari ST emulator card (without TOS ROMs) $99.95
Gemulator 3.02 - upgrade from Gemulator 3.00 ..... $12.00
Gemulator 3.02 - upgrade from Gemulator 1.0, 2.0, or 2.1 ..... $30.00

PC Xformer 2.0 - 16-bit Atari 400/800 emulator ..... free
PC Xformer 3.0 - 32-bit Atari 800XL/130XE emulator upgrade $29.95

The PC Xformer 2.0 program can be downloaded by modem free of charge from most bulletin boards. If you do not have a modem you can order a disk directly from us for $12 to cover shipping and materials costs. Look for the file XF2.ZIP on most BBSes. On Compuserve, type GO ATARI and go into the GAMING section and then go to library 6. On GEnie, type IBMPC, and download file #35783.

PC Xformer 3.0 and Gemulator 3.02 upgrades can be ordered directly from us, Branch Always Software. Personal checks, VISA, and MasterCard accepted.

Gemulator cards are available through Atari dealers, including the ones listed below. Dealers also sells the TOS ROMs required by Gemulator, so call around for best prices as each dealer charges differently for TOS ROMs and shipping.

Gemulator 3.02

So what can Gemulator make your PC do? If you have a 386, 486, or Pentium based PC with at least 4 megabytes of RAM, and an 8-bit card slot, you can install and run Gemulator. With it you can then boot the Atari ST desktop, insert your Atari ST disks, and run Atari ST software! From major DTP packages like Calamus SL and Pagestream 2, to word processors like Word Write ST and First Word Plus, to drawing programs like Degas Elite and Prism Paint, to computer languages like GFA Basic and Laser C, to utilities like Warp 9 and Neodesk.

Gemulator lets you use the 1.44 megabyte floppy disks available for the PC, as well letting GEM based programs take advantage of the 800x600 color graphics capabilities of most VGA cards. And did we mention that it blows away the Atari ST's 4 megabyte memory limitation?

Gemulator runs full speed on a 25 Mhz 486SX. Double that speed on a 50 Mhz 486. Double that speed again on a 66 Mhz Pentium - faster than a Falcon. Although we have not benchmarked the new 90 Mhz and 100 Mhz Pentium machines, expect about 6 times the speed of an Atari ST - faster than even a TT!

Gemulator supports all Atari ST TOS versions from 1.00 to 2.06 and up to four versions of TOS can be plugged into each Gemulator card simultaneously. Please note that due to the various prices of different versions of TOS ROMs, we are no longer listing a combined price for Gemulator with TOS ROMs. Most dealers carry TOS 1.04 and TOS 2.06 ROMs and prices range anywhere from about $30 to $70 a set, depending on the dealer. If you have your own set of TOS ROMs from a dead ST or a TOS upgrade, you can use those and save yourself some money.

PC Xformer 2.0

6 years after releasing the Atari ST version of the Atari 8-bit emulator to Compuserve and GEnie, we released PC Xformer 2.0 the same way - free of charge and available on Compuserve, GEnie, the Internet, and most Atari BBSs.

PC Xformer 2.0 is a 16-bit implementation of an Atari 400/800 emulator. That means that it can run on any 16-bit Intel compatible PC, include those using the 286, 386, 486, and Pentium chips, as well as PCs that can emulate the 286.

PC Xformer 2.0 also requires a VGA compatible display, and about 200K of RAM.

PC Xformer 2.0 is the first and only Atari 8-bit emulator for either the ST or PC that supports all these features:

- 48K RAM with built-in Atari 400/800 operating system and Atari BASIC
- displays all ANTIC text and graphics modes, including GTIA modes
- displays player missile graphics (no collision detection)
- handles display list interrupts, IRQ, and NMI interrupts
- 256 color GTIA palette
- reads and writes to ST Xformer and SIO2PC generated disk images
- reads MS-DOS files directly
- switches Atari BASIC on/off with one keystroke
- joystick emulation using the keyboard
- slow and fast modes of emulation for faster PCs

The speed of Atari 800 emulation is proportional to the speed of your PC, with a 33 Mhz 386 approximately giving the normal speed of an Atari 800. Twice the speed on an Atari 800 when running on a 486/33, and faster yet on faster PCs.

486 and Pentium users can use the slow/fast option to slow down the emulator to normal speed to make games playable, or speed it up to allow graphics and mathematical programs to run as fast as possible.

If you do not have a modem or access to the Internet, send $12 directly to Branch Always Software and we will mail you out a disk. The $12 covers the cost of shipping and materials, so you can't use that towards the 3.0 upgrade.

PC Xformer 3.0

PC Xformer 3.0 is a 32-bit implementation of an Atari 800XL/130XE emulator. It does not run on the 286 processor, and thus requires a 386 or faster. By using 32-bit features of the 386 chip (the same reason why Windows NT and OS/2 2.1 also do not run on a 286), PC Xformer 3.0 adds these additional features which truly make it a complete 130XE replacement:

- 800XL/130XE memory bank switching

- player missile graphics collision detection

- sound card, joystick port, modem port, and printer port support

PC Xformer 3.0 runs on any 386, 486, or Pentium based PC with at least 640K of RAM and a VGA compatible display, so only a small number of PC users will be unable to run PC Xformer 3.0. A Sound Blaster card and game card are optional.

PC Xformer 3.0 will being shipping in September. Users of PC Xformer 2.0 can upgrade to version 3.0 for only $29.95. See your local Atari dealer when it becomes available, or order the upgrade directly from Branch Always Software.

<snip, snip>
: Is this is a mistake of a floppy disc, or a controller's mistake?
: ...or could be something worse ?

G'day Neven, you don't advise if this ONLY a problem with FCopy..OR
what computer? what TOS ?? and what version of FCopy ???

I had the same problem with FCopy III on my MSTE when running at 16Mhz but
was OK at 8Mhz... All was fixed with FCopy Pro (not a shareware prg)

I believe though that even FCopy Pro is UNusable on the Falcon

Does the TOS format work OK ?? if so, I'd say it's not hardware problem. Try
another format program..

Hope this is of help..

>(while calls to the gem library using full ints all over do work).
>
>So what am I doing wrong? I'm pretty sure I sould be using gem16, but
>I apparently don't know how.

You have to add -mshort to the command-line if you want to use
gem16.olb; like this:

gcc -mshort foo.c -o foo.app -lgem16

gem.olb is set up properly to use 32-bit ints, and 16-bit ints where
necessary, so you could use:

gcc foo.c -o foo.app -lgem

instead. Assuming your program used 'short' instead of just 'int' where
you meant '16-bit value'...

Unfortunately, you're overlooking one other problem... all of the
developers are gone. Who'd recompile Atari apps to be PowerPC-native?
I'll bet the source code for things like WordWriter II and other older
Atari apps have disappeared.

Newer apps like Papyrus could be recompiled, but who'd be buying the
systems?

94. Hardware Tek Query: ICD Host Adapters

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-07 21:06:30 UTC
From: obryan@gumby.cc.wmich.edu
Message-ID: <3emvom$9jr@gumby.cc.wmich.edu>
Source record: 28160

Does anyone know enough about ICD host adapters at the hardware level to be able to figure out if there is some signal on the board that I can tap into (and pull up or ground) that will inhibit the board from responding to or generating any activity on the SCSI-bus side?

I'm in the process of putting my Mega ST4 into a tower, with a stack of SCSI devices. Several of them are removable media (CD-ROM, SyQuest, and TEAC tape backup), and I'd like to be able to access them (not simultaneously) from another system outside the box (Mac or Falcon).

I have all the SCSI ID and termination issues resolved, but the problem is that the ICD host (an AdSCSI+) does not expect to see (and isn't a good citizen in the presence of) another bus master. There's no bus arbitration, and the ICD host reacts by asserting conflicting signals, which prevent proper operation.

My first thought was to simply power off the ICD host, but in this state it grounds its outputs to the SCSI bus (actually ~200 ohms for the driver chips). Since most of the signals are active low, this totally locks up the SCSI bus.

I called ICD and asked about the possibility of tri-stateing the bus lines, but no one who is left there has sufficient hardware knowledge to tell me if this is possible (I suspect not). Howard suggested I reach in and pull the plug on the board (pretty inconvenient when it's inside a tower), or rig a switch to disconnect it (bulky, expensive, and possibly unreliable).

What I'd like to do is find a signal point that I could use to inhibit the ICD host board from responding to or generating any bus activity. If I had the schematics, there is a possibility I might be able to locate it myself. But I can't follow the traces on the board well enough to figure out what's going on.

If anyone has any experience or suggestions, I'd appreciate hearing anything you might contribute. Thanks.

- Mark

The answer is yes - just use the Control Panel or Xcontrol Panel to set the
time/date. Interlink itself has no means to do so, but _will_ reflect the
changes made by the accessory.

From: kfason@csn.net
Message-ID: <3eo0a0$1es@news-2.csn.net>
Source record: 28166

Anyone out there running a BBS on a Mega/STe and are using Modem2? A friend has one and is running RatSoft. the only catch is that the Modem2 is a problem. here it is.

WHen a call comes in, RatSoft picks up (v2.1a, latest), but after the connect, it switches to 4800. If my friend goes to the control panel and changes from 4800 back to 38400 (or 57600) things work fine and the BBS is cool. The author of Ratsoft (steve I recall) has made a version specially for this BBS with all the port stuff removed, it still does it.

We've tried various combos of HSMODEM (4), FSER, etc... but no luck. any help is appreciated! with auto programs, etc... On the control panel changes, they where done with Fser .96, some of our other responses are no pickup, to pickup and nothing but garbage being sent (same speed apparently...)

The Mega/STE has TOS 2.06. I know the Modem2 (all ports actually) work fine as it used to be MY machine, and using STalker or Connect, it works fine if the Mega/STE picks up the line in those two programs. Steve says that he is using legit calls that he got from atari...

thank you! any help is VASTLY appreciated. The BBS (Ringworld 303-699-0402) has 1.5gigs online AND 3 CD-ROMS, it is mostly Atari, so you can see why we would like it to get going at greater then 19200...

98. MSTE data tran > 19200

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-08 16:01:52 UTC
From: fezzy@perth.DIALix.oz.au
Message-ID: <3ep29grmp1@perth.DIALix.oz.au>
Source record: 28167

Can anybody out there in "Net land" give me some pointers as to what I'm doing wrong with my comms set up..

The problem is..... NO matter what comms prg I use (Connect or STarCall) I cannot get RELIABLE data connection better than 19200.....
I set the modem2 port to 38400 (as I have read the higher the better) and SOMETIMES I get to log on to my net server and run through a couple of hour session without even ONE hickup and text tranfer rates of upto 3380 CPS ..
BUT 98% of the time I am just helping Telecom as the phone rings the other end answers, I get

PROTOCOL: LAP-M
COMPRESSION: V.42BIS
CONNECT 14400....
then it's dead from there and I mean DEAD.. even the "+++" won't work so I have to switch off the modem and start again. The line test built into the modem suggests I don't have a phone line problem (with the %L = 021 and %Q = 010)

I have a good quality 14400 data/fax modem (Australian made MAESTRO brand) has data compression (V.32bis/V.17), which works very happly on (dare I say) PC clones but alas not on my MSTE...

I have tried HSMODEM4, SERFIX20,TURBOCTS and others in the AUTO folder setup as per the supplied text files, however I must be doing something wrong...

I'm sure it's something I'm doing wrong, as I have read on the net of many happy MSTE owners. I'm sure someone out there will be able to put me on the right track...

Thanks in advance

Martin:

Many thanks for making that available!

I don't have a Falcon (I have a MegaSTe), but I'm going to get your
program for the local Atari dealer who does have a Falcon. Perhaps he
can use it to "show off" the Falcon to prospective buyers.

Last year two people -- independently of one another -- from Las Vegas
walked in off the street, never having been previous customers of his,
and bought Falcons. They each said they were buying them to do
development work for the Jaguar(!)

Again, thanks for supporting the ever-dwindling number of Atarians, even
in these "dark" times.

Sprite Works will let you play sampled sound on interrupt, but I'm not
entirely sure if it's compatible with v2.0 (it's fine on v3.x).

106. Atari Hardware Upgrades...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-09 10:34:26 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <3er3fi$2cb@golem.wcc.govt.nz>
Source record: 28174

Well I have just been given a ST1040, the customer stuffed it up trying to do some upgrades himself...

One big problem with all up grades is that they force a header plug over the MMU or GLUE, these PLC sockets are not intended to have any thing pluged into them...

The result was a damaged MMU and GLUE socket, these both had to be replaced, this is the second time I have come accross this problem...

1. was a 4 meg Xtra-RAM Deluxe by Marpet, the manual is very poor, the copy does not show the ST lay out as stated and the layouts are not correct, can confuse a lay man, the hardware is OK except for this header plug thing......

2. Swichable tos 2.06 by AMITAR of the UK all ST's, Manual is very poor, no mention of the Glue or where it is, no layouts given, hard ware is OK but again this stupid header plug...

P.S. Could be used on a Mega ST....

This header plug thing is a Big problem with solderless upgrades, if fact when we did have a Atari agent here they did not reccomend any Solderless upgrades at all....

P.S. 2 I have yet to fit these upgrades, I had to get the ST working first, one thing I will do is to bevel the edge of the header plug pins, so they don't catch the pins in the PLC sockets....

Till next time...

I assume that all of you (who have THE problem) use hard blow up. I think,
the problem is in the low freq. on the board with quite high freq. uses
to read memory by videl with hard blow up. Am I right? I think that
speeding up the board can solve the problem.

regards,

Simon.

The peopole learns about using this *entirely* _different_ but how
POWERFULL architecture, so the beginings are dificult. But in some 10
years who will use any x86 or even 68k?

> The 68k-series used in MAC's and Atari's are compatible on the cpu-part. The

So, as I said its the time for learning the new quality of programming
art. You have to use all of advantages of RICS and other new solutions in
low level, but in other side, even most important, you have to learn to
use OS-calls properly and _only_ in high level.

So its the best moment to get into PPC. Later it will be the same
situation as it is with Linux on Atari now. And 'old fashioned' companies
with 'old fashioned' CPU's on their boards doesn't have any chances in
the future. BTW please wait a minute (I mean year or two max.) for
quite a lot of applications running on PPC and getting powerful on new
versions of this chip. However if not PPC, there are few oter companies
(DEC, SIG..) trying to sell their (huge - yesterday) systems as desktop

platforms, and I'm *really* SURE, that there will be no place for all
that mass (x85,(9), 68k, ...) in the future.

regards,

Simon.

But if people are (is?) seriously thinking about proffesional (or even
'near proffesional') work on Falcon (Programmers, DTP, MIDI and so
on...), they also have to think about some acclelerator to their machine
like M68040/66Mhz/33Mhz On the Board with some TT-ram and any graphics
expander of course. It costs something about 1k$ and for that they have
near 'power without price' (but also without real service and
documentation) on that quite flexible platform. It is intresting to have
strong Gem&X wINDOWS based system is'nt it?

> If you need hires colour modes then a TT can only do 640x480x16colour before
> you need to buy a video card for it. OTOH I think I can live with
> X in mono only. I can always use my PC if I *really* need colour.

But you know, that with MC-chips and top level wINDOWS (like MAC's, ATARI)
your system is some times faster than on oridinary PC ...

Dear All,

I am interested in obtaining a Spectre GCR unit, in fact I am interested in obtaining a number of the older Mac emulators for the ST (preferably in the UK but I might consider paying US shipping), mainly for nostalgia, as they started me on the way of Macintosh.

I am also looking for info on one of the greatest ST hackers of all time Dave Small, does anyone know what has happened to Gadgets by Small ?

I look forward to your reply

Regards

Julian

111. 1 Gb Harddisk problems

[Article crossposted from comp.sys.atari.st]
[Author was Emmanuel Sustronck]
[Posted on 9 Jan 1995 09:38:22 GMT]

Recently I bought myself an HP C2332A/101/300 1Gb SCSI2 harddisk for
my ST. It has a jumper that should make it respond like a SCSI1. It works on
a PC, a Mac, a Falcon, but *NOT* on my ST. I've tried it with the ICD-Link
and another host adapter, but the result is always the same: the green LED
starts flashing the moment my ST tries to address it, and the ST doesn't
seem to notice there is a drive on the SCSI-bus. I've tried different
harddisk utilities, but nothing seems to work.
Since the thing costed me a lost of money, I really should get it to
work properly. Can anybody help me?

> programmers out there, I ask: When does the interrupt occur
> on your machine? Am I doing something wrong? (Interrupts at
> the end of frames would be a lot more convenient for my purposes)

The interrupt does occur at the end of frame. But if you play
a cyclic buffer, the dma pointers will point to the beginning
of the buffer when you read them in your interrupt handler.
At higher sampling frequencies the dma pointers will point 20-30
words after the buffer starting address, because of the delay
between the buffer end detection and your code reading dma ptrs...
Using double buffering is good, but not satisfactory at higher
frequencies, you cannot change dma pointers quickly enough.
What I did is the following (and it worked without any click
noise at buffer ends). I used one big buffer, but I divided
it in 2 parts. The lower part played, I loaded sample from
harddisk to the upper part. After completion of reading from harddisk,
I polled the currect DMA pointer, till it arrived to the half of buffer.
Then the upper part played, and I loaded the lower part from HD.
You need not poll this time, an interrupt occures at end of frame,
and the playing is automatically goes on from the buffer starting address.
With this method you don't have to change any dma pointers,
and you don't get any noise.

I hope it helps.
/Attila

That's not correct. _All_ the newer monitors I've seen will handle down to
at least 31 kHz, some as low as 24 kHz. But none go low enough to handle
the ST color modes (low and medium).

> I don't have the exact ST-frequencies handy at the moment, sorry.

It's 71.2 Hz vertical, 35.7 kHz horizontal, at 1Vpp analog into 75 ohms.

Actually, low-res and medium-res are the same, at 15.75 kHz. High-res
is 35.7 kHz.

Problem may be that the drive is set up with parity enabled, for most Atari
host adapters you have to disable it.

I'm not aware of any pd fax packages in English, but STraight Fax is a commercial package, and is distributed by Toad Computers (1-800-448-TOAD). I don't actually own it, but I have seen it in action, and it seems to be a very well written application, and supports a wide variety of modems. It supports Class 1 and Class 2 (not Class 2.0) modems. I carried in my LineLink 144e (from MacWarehouse), which is a Class 2 14.4k SR Fax modem, and it worked beautifully. I think that Toad is selling the package for about $80 now.

128. DIP switches (jumpers) in 5.25 floppy drive (HELP !!!!)

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-10 00:47:52 UTC
From: npetrlik@public.srce.hr
Message-ID: <3eslfo$mvs@nippur.irb.hr>
Source record: 28096

I have 5.25 inch internal PC drive, and I've connected
him to my STE (connections are all OK, and the power
supply for 5.25 is taken from the connector on motherboard.
That's all well and fine, but, how I must set
the DIP switches (jumpers) in 5.25 drive ?
Without setting thing obviously don't work ..

The DIP switches (jumpers):

In 5.25 drive there are 8 jumpers.

The marks besides are:

1st Group:

DD
HR
IL
IS
MM
MS
IR
IU
RI
RD
DC
SR

In 1st group the used slots are: MS, IU, RI, RD, DC, SR
Used means that the jumper is in the slot.

2nd Group:

In this group one slot is used, and besides the slots
there are no marks at all.

3rd Group:

TD
DS2
DS1
DS0

MX
DS3

The used ones are: TD, DS1

The only thing that I maybe figure it out is that
the marks beginning with DS (DS0, DS1 ..) are for
the disk selection (which one should be B, etc ..)

I want 5.25 (external) to be 'B', and the internal 3.5 inch
to be 'A'.

HOW must I set the jumpers ?

Any help would be wellcoming ..

THANKS.

I have been trying to find this SPRITE WORKS ever since I saw it reviewed in one (or more) of the ST mags. I can't find it on GEnie or any Internet site. If you know where I can locate it I would be very grateful. It looks to be a very nicely done addition to my GFA library.

Thanks

"graphic:"

Check with Lee Seiler over at GEnie (I *think* he's L.SEILER on that service, but I don't know what the corresponding Internet address is) or Ringo Montfort (73243.2750@compuserve.com); either one of them should know if there's anything available to do that.

Here, in fact, is a recent announcement about the Lexicor Software Corp. that they posted on CompuServe (I think it's legal for me to post this):

#: 102900 S10/Graphics
29-Oct-94 20:06:13
Sb: Lexicor's New Releases!
Fm: Ringo Monfort Lexicor Te 73243,2750
To: all

LEXICOR SOFTWARE CORP.

Latest hardware and software news!

These are the products we currently are supporting and distributing:

Phoenix Object Renderer
Chronos 3D
Cyber Color
Genesis Galactic Toolchest
Cybersculpt
Raystart
BlowUP'030 Falcon Screen Expander - Soft, Hard I and Hard II
NOVA Graphics Board (NOVA, NOVA Plus, SuperNOVA, Andromeda) 16M
Digital Arts Picture
Digital Arts Vector and Vector Pro
GT Look 2 (Epson Scanner Support Software)
Prism Paint 1.5 and 2.0
Metamorphosis 24 - Picture Transformer
Medusa 68040 Atari Powerstation

Soon to come packages:

Digital Arts Layout
Digital Arts Render and Utility Kit (ready very soon)

The Medusa'040 has been selling on a steady basis and has been selling extremely well in Europe, it has become the professional atari computer system for DTP and Graphics work in Germany.

Digital Arts Picture.

Photo CD Module is now available for 69 U$D as a new external Digital Arts Picture Model.

The Digital Arts Render Kit will feature a number of runtime files and runtime tic's (from Vector Pro) and compile them into one whole movie playable with the very fast DA's Movie-Compiler Player.

The Andromeda SuperNOVA Graphics Board is the latest graphics board from Computerinsel and has 4 Megabytes of Video RAM. This board can display 1280x1024 in 16,7 Million colors <72Hz>.

The Medusa has been selling better than we expected in the USA, and many have been sold in Germany. Especially the DTP and Graphics/Animation atari users.

Some Medusa specs:

VME bus card
rom-port card
SCSI card
MC 68060 is currently being built by Medusa built and Medusa itself has for this purpose a 68060/50Mhz which currently runsabout twice as fast as the current Medusa.

For the SGI systems:

Movieola will be featured in this months SGI Expo October'94 in Yokohama, Japan where Lee Seiler will be going to demonstrate the latest Lexicor and Radiance Corp.

Lexicor Software Corp.

Good luck!

Closer than that,

Atari Hi-res monitors are in fact VGA monitors. All you need to get
them running is an adaptor (feed mono signal from ST to each channel
on monitor , pass the sync pulses, and return "mono detect" signal to
the ST)

You may need to adjust the trimpots in your monitor - it depends how
"auto-ranging" it is.

Gasteiner do supply this adaptor, but if you can't get it I will take
mine apart to check - it's very simple - a plug at both ends, 3
resistors and some wire connections.

Beric..

PS You will not be able to use the monitor for colour, though.

132. Minix and Gemini

Anyone using Gemini with Minix?

I am about to install the Minix filesystem onto my harddrive and would like to know if I run (MiNT aware) Gemini under MiNT within the Minix partition will it display the extended filenames within the Gemini windows? Is it even possible to run Gemini with the MinixFS?

Also, does anyone know how the proposed translation of Gemini into English is progressing and will this translation include Mupfel?

Thanks in advance,

Nick.

>windows? Is it even possible to run Gemini with the MinixFS?

Yes. Gemini is aware of MinixXFS, and whilst not providing the same level of MiNT support as Myriad, it does understand & display long filenames, and also spots symbolic links (the filenames of symlinks are displayed in italics). Mupfel allows you to use the & background launch modifier, and (I think) understands job control as well.

I wish the author of Myriad had finished what he began, as that was really looking good for MiNT users....and used much less memory than gemini.

>Also, does anyone know how the proposed translation of Gemini into
>English is progressing and will this translation include Mupfel?

Hmm. Don't know about that, using german software seems to be a part of the Atari scene now, so it pays to pick up a little computing german.

Gemini does understand long filenames, I know the icons that are dragged to
the desktop use them, so I'm quite sure the dir windows will also.

On a related note, does anyone know if there is a way to use Gemini as the
INIT in mint.cnf?

136. PC to ST Disk problems.Please HELP!!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-10 23:33:05 UTC
From: joneil@infi.net
Message-ID: <3ev5fh$sok@lucy.infi.net>
Source record: 28105

I'm a new ST user so please bear with me!

I've been told that I can download files on my
PC (BBS,Internet , etc.), copy them to a 720kb
2S/2D 3.5" disk and put that disk in my ST and
copy the files to its hard drive. So far I've had
only limited success. I've been able to call up and
read a text file using this method (sometimes), but
copying or trying to run anything larger like a
program file returns the message "Data on the disk
in drive A: may be damaged. You must use the right
kind of floppydisk; you must connect your hard disk
properly." I've tried several disks including new ones
both DD and HD at 720kb, I've cleaned the heads on both
drives and I've tested the ST drive with disks formatted
by it and it seems to work fine on it's own. This is very
frustrating because I have access to so much software for
the ST on the A.A. but just can't get it onto the ST.

PLEASE HELP!

Thanks Very Much!!!

Well if people are prepared to spend 1k$ on a Falcon then sure - it will
be a very nice machine. The point I was making is that spending $100 on
something like BlowUp or Screenblaster does not give you a big screen
resolution without major performace implications. OTOH the TT can do
1280x960 paperwhite without a serious degradation in its performance.
Despite the TT being an older machine - its a better design in many
respects - especially for an X windows terminal.

I'd go as far to say that running a Falcon in 1024x768-16 colours so seriously
cripples it that it would not be practical for a X windows station.

If you spend 1k$ on a TT then you can buy a graphics card/monitor which
will leave the Falcon standing , and you can buy a 2nd hand TT for much
the same price as a new Falcon.

I'm also not sure that you could get a 68040 ugrade with FastRAM and a
screen enhancer for a Falcon for 1k$.

>It is intresting to have strong Gem&X wINDOWS based system is'nt it?

It is. The TT is a good bit of kit for both.

>> If you need hires colour modes then a TT can only do 640x480x16colour before

>
>But you know, that with MC-chips and top level wINDOWS (like MAC's, ATARI)
>your system is some times faster than on oridinary PC ...
```

Not sure quite what you are getting at here - but its true that my TT does feel faster than my PC running Windows. Thats mainly due to Windows paging to the disk all the time. The garphics adaptor in my PC is as least as fast as the one in my TT (but won't do 1280x960 - at least not on my monitor).

:-)

Roland.

I used mfp i7 and didn't bother Xbtimer.
Anyway they are all the same if the interrupt occurs at the
beginning of the buffer or at the end. I tell you these
two points ARE THE SAME if you use a repeating buffer.
So this question has no meaning.

> > But if you play

Sorry, I forgot to mention that the harddisk recorder I wrote used
4 16-bit stereo channels, not 1 as your pcm player. Any of the 8 mono
16-bit channels can be easily configurable to be the left or right
channel of a stereo one. Moreover I can mute any of the 8 mono
channels, even during record/playback. My program works even with
a very slow (700kb/s) harddisk at 50 Khz.

So you'll never know what might happen until you try to deal
with huge amount of realtime data by the limits of the bus
and DSP bandwidth. Before you criticise me, try it!
You'll be surprized :-) that you can't handle the situation!

>
> >I hope it helps.

From: jdmt@dcs.ed.ac.uk
Message-ID: <D28r29.G44@dcs.ed.ac.uk>
Source record: 28112

Hi,
I have been following the 'X11 running sort of ' thread with some
interest as I would love to run X11 on my TT. I had a look at the README file
in the Mint/X11 directory at atari.archive and it seems that X11 only runs in
mono modes. As I am in the process of adding an SVGA card to my TT, I will soon
be able to run at high res. in loads of colours (e.g. 800x600x64K) and I would
love to run X on this card. I will obviously have to patch Mint-X to support my
card, so I need to get my hands on the source code, can anyone tell me where to look?

Thanks in advance,
Cheers,
Joe.

Big number of users of oridinary pc's becouse there will be no clones of
PPC (or DEC/SIG and others) systems ever (maybe a small amount, but not
so much as now) and I think that in oridinary ps'c world there will be
nothing more, then mc68060 or 686 (?-). So peoples will be buing
'original' systems.

regards,

Simon.

146. 2.5Mb simm problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-12 10:52:44 UTC
From: Bales_N@CIRAD.fr
Message-ID: <9501111413.AA00143@montp.cirad.fr>
Source record: 28121
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

CEO file contents:
Hi and Happy New Year!

I have an STE with TOS 1.6 fitted with 2.5Mb. Due to a bug with the MMU, I have to use run SIMMFIX.PRG in the auto folder if I want the memory to be correctly recognised.

Now, up to here I've had no problem, only some progs crash when they attempt to access the higher memory if SIMMFIX hasn't run. This only happens with games that autoboot without an AUTO folder on the disk (eg: EPIC).
All I can do in such cases is open the machine, remove the shielding, take out the extra simms, put the thing back together again.

So I was wondering if there was any (easy) way to put in some switch that would disable/enable bank 1. Another solution could be a program like simmfix, but would be reset resistant...

Any ideas suggestions out there?

Thanks in advance

Nick.

147. UNIX emulator for ATARI ST?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-12 11:05:55 UTC
From: davj@ds5000.irb.hr
Message-ID: <3f32ej$bft@nippur.irb.hr>
Source record: 28123

HI all,

I'm looking for atari ST emulator on unix (linux), and heard
that there is high performance macintosh emulator called executor.
It emulates 680x0 very fast, saying pentium runs faster than
fastest mac. could it be used also for ATARI ST emulation?

best regards, Davor

>Thats untrue. When I had mine MSte, I had my modem on port2 @ 38400.
>Right before I got my falcon, I got my USR DS with 21600 and it worked

With HSMODEM installed, my MegaSTE runs fine with a DTE of 57k6. I guess it would even go higher, but my modem doesn't support that.

Sometimes it depends on the pcb-revision of your machine, so it often won't work at that speed.

For some faulty MegaSTE's there's a replacement GAL available. Look out for HSMODEM and FSER096 on your favourite ftp-site.

149. X11R6 for Atari Linux Released

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-12 14:42:14 UTC
From: Craig Graham <Craig.Graham@ncl.ac.uk>
Message-ID: <3f3f46$m0i@whitbeck.ncl.ac.uk>
Source record: 28116

Well, I've just been reading the release announcement from the
Linux68K mailing list, and Atari X sounds really good - supports
all falcon & TT video modes, full X11R6, shared libraries, the full
Del Monte!!!!

This might just prod me into buying that maths co-pro I've been after
so I can run Linux.....

Craig.

From: A.I.Nicholls@herts.ac.uk
Message-ID: <42332f1582de@m6.herts.ac.uk>
Source record: 28117
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st.tech

I found some functions within support.h, namely unixtime and dostime functions and want to use them within my own programs. Unfortunately when I seem to compile it, it says it cannot find the functions..

Also there is a regular expressions library, and I can't find any instructions on how to utilise it... any help that?!?!?

Any help would be greatfully received!

Alex Nicholls

Hi there,

I believe that the sources for MiNT 1.12 do not compile "out of the box" with Lattice C. Are there diffs available and what FTP site could I find them from?? Also are these up to date with the latest patch? (1.12-h2) I believe).

Cheers,
john

:>> the Falcon docs and the _Compendium_, the interrupt should
:>> occur at the *end* of the frame; however, my experience is
:>> that it occurs at the *beginning* of the frame. To all Falcon
:>> programmers out there, I ask: When does the interrupt occur
:>> on your machine? Am I doing something wrong? (Interrupts at
:>> the end of frames would be a lot more convenient for my purposes)

Interrupts occur at the start of a frame so you can preload the next sample
buffer pointers thus ensuring seamless linkage. I'm not 100% certain about
this but I think if you use the Monochrome detect line for the interrupt
(see atari compendium) then the mfp active edge register can be used to set
whether the interrupt occurs at the start or end of a frame (thats bit 7
of address $fffffa03... i think... but check that in the compendium)

Hope that helps
Griff

153. GCC newline problem

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-12 23:14:48 UTC
From: robotron@moroder.demon.co.uk
Message-ID: <199501122314.AA02160@moroder.demon.co.uk>
Source record: 28120

I recently had a beta tester complain that a GCC-compiled TOS program sent text all over the screen by not displaying a carriage return at the end of a line. And sure enough, a bit of experimentation showed that the compiler (GCC 2.5.8) interprets "\n" as the linefeed character alone, but it works perfectly for me and my other beta testers.

The only difference I can see is that he has the program running under a CLI called Craft (never heard of it myself), while everybody else uses Gulam or Tomshell. I've even tested it with the GEM desktop itself, and despite the fact that the binary contains only a linefeed in its text strings, both carriage return and linefeed seem to be generated correctly. Indeed, when I print the strings to a file, they contain both characters. And if I change "\n" to "\r\n", I get two carriage returns and a linefeed.

So my question is: which is to blame, Craft or GCC?

Stephen

157. ST Upgrades No.2

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-13 09:40:56 UTC
From: sheppard_r@kosmos.wcc.govt.nz
Message-ID: <3f5hr8$69q@golem.wcc.govt.nz>
Source record: 28126
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Well this is a followUp to the Upgrades that I had to fix up..

These are the Marpet Xtra-RAM Deluxe and the AMITAR TOS 2.06 Upgrade..

Well After chamfering the pins on the header plugs so that they
would not damage the PLC sockets of the Glue and MMU, well after fitting the
Ram upgraded all was ok...

The AMITAR Doc's refer to a Automatic reset, but the logic is not
fitted, no mention of this in the doc's...

A had a small problem with a bent pin in one of the header rom sockets,
but with a help of a soldering iron you can replace a damage pin...

The BIG problem with the AMITAR is that you can't fit the shielding
back on, it will have to be cut were the HI ROM is and were the Glue is,
this is a REV. D type board, one with Blitter pads fitted...

I ran Gembench to se how fast TOS 2.06 was, all the GEM things were faster,
but the best one was only by 6%, the otheres were 4 and 3%, that being the New
Dialogs, 3 items only that is..

The Marpet RAM upgrade is well made, the AMITAR is not so good, but is simple
and does work...

The other BIG gripe with the Marpet was the clip leads used to pull up
4 resistors to disable the built in ram, these should never ever be used,
they can fall off and cause a short, I soldered a small piece of wire to
these resistors, then to the 5 volts...

So have a think before you rush out and buy these upgrades...

Ok folks... I just picked up a used 1040 with mono monitor and Cubase.
Now, a couple of questions.

1) Is there any way of speeding up the 1040 for a few hundred dollars?
Is there something as simple as poping a 16MHz 68000 CPU in it?
(Would that even work?)

2) Is there an easy way to hook-up an IBM-type IDE hard disk to the 1040?
If so, how?

Please reply be MAIL. Thanks!

Hi stephen,

Have you guys checked the settings for the VT-52 settings for the ST? I think ST uses the VT-52 character output mode when in TOS.

] So I was wondering if there was any (easy) way to put in some switch that w
] disable/enable bank 1. Another solution could be a program like simmfix, bu
] would be reset resistant...

Could possibly be done, but the computer re-checks the memory after
a cold-boot and very few reset-proof programs survive a cold-boot (read,
none at all). SIMM-Fix will (should) survive a soft/warm reset
(Ctrl+alt+del or the reset button). I use a different program just
called "MEM" which does better checking than SIMMfix. All I do to
autoboot a game with 2.5meg, is to insert the boot-disk with Mem in
the AUTO folder, and then as soon as the computer resets after the
2.5Meg being initialised by Mem, I pop the disk out, and throw in the
one I want to use. And more often than not, it works fine.

I think the archive name is mem_2_5.lzh or some such thing, I got it
from micros.hensa.ac.uk anyway, just do a search for "2.5" or "SIMM"
or some such thing on there.

How hard would this be to port to MiNT/MiNTnet? I've been looking over
the R5 MiNT port on a.a, and there are just a few too many "this part
doesn't quite work yet" disclaimers for my comfort.

Hi,

under which circumstances can I use a PAM's Net with MiNTnet ?

I have the PAM's Ethernet card (TT with VME, Mega ST with Megabus and
ST with DMA/extern), but only the ST/TT Net-Software.

Now I have to decide to buy TCP/IP and NFS from PAM's (>400US$ per license)
:-(((

_or_

install just MiNTnet to have all the fine TCP/IP run with MiNT.

So, what do I need to use the Ethernet with MiNT ???

Thanks in advance for your help

Martin

BTW do .XIF drivers exist for any parallel port ethernet adaptors? Also
is there any support for this sort of stuff under Linux/68k?

Thanks

Roland.

176. Any interest in a Mega-ST

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-17 01:00:23 UTC
From: tgrel@aol.com
Message-ID: <3ff4r7$c6t@newsbf02.news.aol.com>
Source record: 28044

I have a Mega ST that is collecting dust, and if there is any interest I'll go through all my stuff (and there is TONS), and give out exact descriptions of what I have. Off the top of my head, I have both a Mono and Color Monitor, monitor switch box, hard drive, Okimate 20 color printer, and software like you would not believe - DTP's, Wordprocessors, Compilers, and Games, Games, Games.... Not to mention lots and lots of books and magazines. Depending on what I hear back, I'll go make a list and let you know. At last boot, everything worked very well, except a hard drive power supply that took once or twice to get working.

Please send Email, I seldom get to the newsgroups. I'm not giving this stuff away, but all fair offers will be considered. Let me know if you're interested.

tgrel@aol.com

> > will leave the Falcon standing , and you can buy a 2nd hand TT for much
> > the same price as a new Falcon.

But alredy you can also buy 2nd hand Falcon much cheaper then 2nd hand TT :)
Of course you haven't TTram, VME. OTOH you have SCSI2, VGA, DSP and so on...

> > I'm also not sure that you could get a 68040 ugrade with FastRAM and a
> > screen enhancer for a Falcon for 1k$.

I think the Barracuda will be cost something about that, but of course
without TTram (however with simm's slots for it I guess).

> > >It is intresting to have strong Gem&X wINDOWS based system is'nt it?

I won't belive, that ie. pagemaker or corel can go faster even on DX66
than Calamus or Da's Vector on 32MHz TT (even with color graphics card,
and good 'svga' costs a lot for both TT and PC).

regards,

Simon.

: Any chance of uploading this to a FTP site?
: Assuming it *is* legal, of course!

This file is available at many BBSs as a developer's version. I have had this on my hard disk for quite a while now....but do not know the legal position on putting it on hensa, or any other ftp site. I did ask Atari UK, but the person who I e-mailed said that he did not know anything about TOS development, and so could not tell me anything about the file.

If anyone finds out if it is OK to put this on ftp sites, then please inform me, and I will definitely make it available at HENSA. In the meantime, if you want a copy, then search around BBSs, or get it from New Age (who I think are not sure of the legal situ themselves), or write to me via e-mal...

Which COMMS-pgoggi do you use? If you've installed HSMODEM (whch I highly
recommend) you can select the higher speeds from within the application, e. g.
CoNnect (which I highly recommend as well).

See the HSMODEM-DOC's for further details of mapping the standard speeds to
the new, higher ones.

You cannot directly connect a Pocket Lan Adapter to the Atari centronix
port due to lacking signals (Acknowledge, Selectin, Selectout, ...).

But there exists hardware to connect a Dlink DE600 to the catridge port.
Hardware layout is available from fortec.tuwien.ac.at.

In fact I'm currently testing a self written .xif driver for this combo.
I works quiet well and the next MintNet release will contain that driver.
(ftp throughput is as good as can be expected for the DE600, ie 90k/sec
at up *and* download).

I haven't used the program, but would like to buy
a fairly competant 3D program for the Falcon. I'm
a graphic artist for Intellimedia, and use Autodesk
3DS v.4 now, but I doubt I'll find a program quite
that slick for the Falcon (3DS has its problems,
too - no REAL spline modelling). I don't relish
hanging around after hours doing my personal
projects or pirating 3DS to the PC I don't even
own. Any opinions about Falcon 3D programs
will be helpful.

191. Help on Desktop Redraw needed.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-18 17:59:49 UTC
From: jimt@motx1
Message-ID: <D2M4nq.334@mdis.com>
Source record: 28060

I've been trying, without much success, to complete a screensaver
desktop accessory utility for the Falcon.
Everything works fine up until the point that the saver terminates.
I'm just left with a blank screen, Any of the desktop objects will
become visible again only if they are selected with the mouse or
reading the NEWDESK.INF file.

The code fragment below :

```
if(!USER_ACTIVE && saver_on) idletime+=10;
else idletime = 0;
if(idletime > saver_enable_time){
wind_update(BEG_UPDATE);
wind_update(BEG_MCTRL);
hidemouse();
runsaver(); /* Returns when user activity detected. */
showmouse();
wind_update(END_MCTRL);
wind_update(END_UPDATE);
wind_set(DESK,WF_NEWDESK,0,0,0,0);
idletime = 0;
}
}// return to evnt_multi
```

According to the Atari Compendium, the wind_set() call in the above fragment
should result in the desktop being redrawn.
What am I doing wrong ??

Now thats *exactly* what I hoped you would say! Any chance of it working
on a TT?

Thanks

Roland.

You can get a decent, actively accelerated, PCI-GFX-card for as little as 500,--DM. With 2 megs DRAM, that is. Tell me where I can get such a card for _any_ Atari at that price.

Whar I'd need to know is: What about compatibility between different
parallel-port connectors ? (hardware and software)

Do I have to buy this special connector to use the interface and software
from the TU Wien or can I use any other connector as well ?

My most favorite software (besides the basic driver) would be a
'harddisk' driver that can mount NFS-volumes as if they were plain
AHDI drives and a simple telnet client.

A great thing to have would be a SCSI-network connector that can
disguise as a plain SCSI harddisk to the machine it is connected to.
This would be dead simple to use from the ST or any other SCSI-capable
machine without the need for special network driver software...

Greetings,
Ripley

Could someone either tell me a fast site where I can ftp mh-mint112h2 from,
or upload to to hensa or atari archive?

Last night tried to ftp it from tu-dresden, but had to give up after three
quarters of an hour after only having recieved 60K (around half). I was
getting a throughput of 30cps - which isn't funny when you do it by phone
as opposed to a straight link :-(

Also, I have been told that there was a project to write a version of GEM
AES for MiNT, either as a free or as a shareware product, but that it has
been dropped because of lack of time. Apparently a large proportion has
been written already. Is there any chance of someone picking up the
development of it again or have we seen the last of a great idea?

I have a dead (?!?) 1040ST... I was using it while
it was raining (outside, I was inside), so I think
my place got zapped by lightning. The monitor went
blank, and when I turned it off/on, there is this
annoying "ehhhhhhhhhhhhhhhhhhhhhhh" sound....

And I've never gotten it to work since (months now)

Q: Is there a fuse that could be checked/replaced?
or is this just a write-off.

Any comments (email preferred) appreciated.

ciao!
k.

Well in my experience different adaptors need different drivers. The DE600 and DE620 won't work with each others drivers for instance. DLINK and XIRCOM need their own drivers as do LONGSHINE. AFAICS you need a *real* DE600 to get this to work. OTOH DE600 are obsolete - so you should be able to pick one up quite cheaply. They might even be available new still.

> Do I have to buy this special connector to use the interface and
> software from the TU Wien or can I use any other connector as well

I FTPed some of the stuff on the DE-600/Cartridge adaptor board yesterday. The .IMG circuit diagram make sense - but the PCB seems to be in HP plotter language (at least thats my guess). Does anybody make/sell a PCB for this adaptor - or alternatively have the PCB in a bitmap file I could make my own template from?

> My most favorite software (besides the basic driver) would be a
> 'harddisk' driver that can mount NFS-volumes as if they were plain

Surely MiNT-Net can already do this? At least I can mount TT volumes on my Linux PC. I haven't tried telnet myself.

> A great thing to have would be a SCSI-network connector that can
> disguise as a plain SCSI harddisk to the machine it is connected to.
> This would be dead simple to use from the ST or any other SCSI-capable
> machine without the need for special network driver software...

Yes - but how does this adaptor know how to present the data to the computer? Not all computers partition their disks alike. Plug it into a Mac and it will need to pretend to be a Mac partition. Plug it into a Mini, it hasn't a hope of knowing whats expected.

Of course it wouldn't be impossible to build a sort of hardware NFS solution which appeared to be a CD-ROM (hence ISO9660 format). However this would be pretty limited (how do you choose which remote partition to mount? Size of the partition limited to 680Mb or so) - and also you still need CD-ROM drivers. A nice hack for the Atari - but I don't really see any

commercial advantage. The Atari has been very poorly supported in the networking area. This is now changing (with MiNT-Net and Linux/68k), and it makes sense to implement the Atari end in a flexible way that had more uses than just sharing files.

:-)

Roland.

Yes, of course this should work on the TT without changes (except that there
may occure some timing problems within the driver because I can't test it on
any machine faster than 16MHz).

Does anyone know the difference between an ST's centronics parallel port,
and a PC's?

I thought that the PC is supposed to be bidirectional, but not the ST, but
this is not the case, as I can send data out of the port quite happily.

Perhaps there are some extra pins used or something? Maybe these were
added to the Falcon, as I remember reading that it was coming out with a
bi-directional parallel port - yes "coming out" - it was an old mag.

Also does anyone know the max transfer rate for the port? And does it use
a PIA, or some other chip?

Any help would be appreciated, as I am (have) wired up a cable and
semi-written some software for transferring files between my ST and my 8bit.
As soon as I have finished that, I then need to write a PC version for some
friends.

Thanks,
Richard =8-]

Have you tried virtual memory? I use Outside III and it works fine, but i
have not tried running X until now.

its the PSG soundchip port B data, and strobe and busy are bits in port a.
the max transfer rate shall depend on the clock-cycles, may be a 10th of 8MHz

> Any help would be appreciated, as I am (have) wired up a cable and
> semi-written some software for transferring files between my ST and my 8bit.
> As soon as I have finished that, I then need to write a PC version for some

well i tried that too with my ST and my C64 but i seem to have problems with the
voltage-levels, because my st doesnt seem to get the data bits ...
the GEMDOS (or was it BIOS) call to feed the PSG might can send but not receiving ...
i recently plugged a led to the strobe pin and was surprised that it seems to be
always on high ... |: (not even cycled)

i would appreachite too some advices ...

>1.2Mb, a window with tcsh and you have less than 700k to do work in. Does
>X give you more or less memory to play with?

X uses a lot of memory, true. And it's applications tend to be massive
(eg. Xterm uses around 650K when running).

But, to actually boot it, it uses around the same (perhaps a little less?)
memory as multiTOS. On a 4Meg f030, I have around 1.5Meg free once X
is running, with the TWM window manager on an 800*600 mono screen.

The memory usage is why I ported Xvt, as it replaces xterm but uses less
than half the memory. I can get 4 Xvt terminals up on my falcon as well as
the usual login shells & stuff. And it doesn't seem to slow down a deal
as you start more windows either.

There is no real reason to use X for MiNT (yet) unless you're a bit of
a Unix techie, as there are currently no useful applications compiled for
it (although compiling from Unix-X isn't dificult).

Craig.

Ahh yes, but no-one is doing a port of X11R6 are they? So you'll just
have to work with the R5 server for MiNT. Which is no bad thing really,
X11R6 is far from being a universal standard at the moment, I would think
that most people still use R5. The guy is working on the bugs it's
not like he just stopped work....so go with it.

Hi !
Althoguh, i'm quite familiar with MiNT, i'm not a very experienced X-User.
I tried to add/replace the font(s) originally delivered in the X11R5-Archive
by replacing the appropriate fontfiles with other ones from a SUN.
The result was a rather strange looking Xterm. Obviously the fonts were
not ment to be used on an Atari ;-)
So, is it possible to add new fonts to Mint-X, and if so, how can it be
done ?. I know, there are tools like mkfontdir and bdftosnf but i'm not
quite sure how to use them. (I could not find the sources anyway ....)

Oh, and BTW: Anyone solved the "missing-libXext.a"-problem yet ?

That's all well and good, Hendrik, but the problem is, when all is said and
done, that you _still_ just have a PC (albeit one with a fast display) ...
and that's an unacceptable solution for many of us. ;-)

: can tell me what's done wrong by Gemini).

Well, what happens is that, when Geneva is running, programs launched by Gemini can't find their resource file(s), if they have an external one. Programs (such as Everest) that don't have an external resource work beautifully. I don't know if this is Geneva's fault or Gemini's, but NeoDesk 3.04 (which I don't have :-/) will launch programs properly, so there is a way to do it. Supposedly Geneva uses the same method as MultiTOS to start a multitasking program, so Gemini _should_ work, as you say.

213. Shel_write och appl_write

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-20 18:08:00 UTC
From: christian.dahl@tnogobl.ct.se
Message-ID: <152066c7@ct.se>
Source record: 28079

Hello world! I have a quite big problem. I'm currently running Mag!X, and I would like to start a program in parallell and others serial. Now, using the shel_write it should be possible, but I can't get it to work! The only start I can get then is when the program terminates, the another can be started (like on a ordinary TOS). I would like to be able to start up a program parallell, and then start up a program serial. How do I do? (if examplecode, then please in C or ASM).

Now, when I have thoughs programs running, and when the program which I started in serial terminates, then I would like to send a message to the program I started in parallell through appl_write. The thing is that I can find out the PID through appl_find, but when I appl_write the message (16 bytes), the computer hangs totally, both under Mag!X and TOS. :-/ Would really like to know why!!

214. Monitor agony!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-20 21:17:20 UTC
From: e91rj@efd.lth.se
Message-ID: <3fp990$3kc@nic.lth.se>
Source record: 28080
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi all!

I've come across an old monitor that has a painful(!)
resemblance to Atari's sm124 (the one with the knobs on the side), the
"box" looks exactly as the Atari equivalent but this one has no speaker
and the plastic frame around the screen is darker than the rest of the
monitor (which is/was atari-greyish).

It's from a company called Taxan (!), with ser # E4-70300086,
dated March -87. It has a chassis type MT-15 and a Goldstar tube with
a type # 31KGLA and/or (it says both on the sticker) 31KGB (russian
version ? ;) Tube serial nr. is 70302760. On the back of the monitor it
says "KAGA Electronics co LTD".

It doesn't have the 13 pin atari monitor plug, only a nine-pin
"joystick" male with only 6 or 7 pins available (it's at home now and
I forgot to write that down), something like this.

```
_________________________
| | |
_________________ |
\ . . . . . / These two pins have 1.7 and 0.7 volts
\ . . / over them when I plug the monitor in,
~~~~~~~~~~~~~~~ can't tell if its a signal or DC
```

Can I use this as a mono monitor? (it is a b/w monitor, I can
tell that from the cicuit board) What are the different pins on the
9-pin? Why do crocodiles cry? Mail or post and I will be happy.

Thanks in advance

: Does anyone know the difference between an ST's centronics parallel port,
: and a PC's?

: I thought that the PC is supposed to be bidirectional, but not the ST, but
: this is not the case, as I can send data out of the port quite happily.
<snip, snip>

I don't know the method of how it's done but I do know that 2 way data transfer is possible via the ST's centronics parallel port (and its quite fast as well)

How do I know you may ask ?? I have *ATARI* produced software that was produced for the STbook data trans to the ST,TT,Falcon (the STbook does not have a floppy only a HD).

AFAIK the magic is carried out within the CABLE.....

I'm sure that the *SLAVE* side of the software could produced for the other type of P.C.'s (you know those "clone" types and Mac's) it's just that nobody has sat down and done it....

BTW the above software is in two parts MASTER & SLAVE. It's simular to GhostLink in operation BUT without the excellent Ghostlink desktop operation

eMail me if you require more info

220. Linux SCSI tape device functional?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-21 15:46:11 UTC
From: dawinic@eos.ncsu.edu
Message-ID: <3fra83$msc@taco.cc.ncsu.edu>
Source record: 28089

Is anyone else having problems with the Linux/68k SCSI tape device, in the precompiled 0.9pl4 kernel?

On my system, almost any attempt to read tapes seems to result in an `incorrect blocksize' error. And when writing, it writes a bad directory checksum after 15 or 20 files. Changing the blocksize doesn't seem to matter.

My SCSI devices: 4mm Python 25501 and a 340MB Seagate, on a TT030.

- thanks,
dave.

221. Mega ST 2 - SW/HW for sale (long post)

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-21 15:47:18 UTC
From: tgrel@aol.com
Message-ID: <3fraa6$8g9@newsbf02.news.aol.com>
Source record: 28090

*** Long post warning *** Mega St and 'accessories' for sale!

Since I've had an avalanche of interest, I've decided to sell the whole deal to the highest bidder. (Escpecially since I don't know the current market, and you supposedly will) If I don't like the price (< $500), then

I'll just keep the machine and my (eventual) kids will have enough games to keep them happy a long time. I invested thousands here, so someone is going to get ALOT for their money.

All items are at least 4-5 years old. I don't have the latest 'anything'. I'll leave that up to whoever gets the system. All software comes with boxes and doc's unless otherwise listed. I got alot of this stuff when I bought the system, so I've never even run it myself.

Please email tgrel@aol.com with any questions, offers. I'm NOT breaking up all this stuff seperately, so don't ask. I want one buyer, and its gone. Shipping costs will be the buyers responsibility. I will only sell it C.O.D. and as a warning the shipping will be over $50 (I'm positive of that).

Here we go....

Hardware

MEGA ST 2
Mono Monitor
Color Monitor
Monitor Master
85 Meg ICD hard drive (needs new power supply)
360k 5-1/4" external floppy drive

] Surely MiNT-Net can already do this? At least I can mount TT volumes on
] my Linux PC. I haven't tried telnet myself.

You have it in the wrong direction although the other way round would be
useful as well. But I'm not sure whether I really want to use MiNT on a
plain simple 520STM, even with a speeder installed...

] > A great thing to have would be a SCSI-network connector that can
] > disguise as a plain SCSI harddisk to the machine it is connected to.
]
] Yes - but how does this adaptor know how to present the data to the computer?

If it fakes a real harddisk drive it doesn't have to. This would be a raw
disk w/o a filesystem. The drawback would be that the exporting machine
won't be able to access the files itself...

Greetings,
Ripley

PS: Anyone out there know about a source for a DE600 adaptor ?

>

I think the original poster was confused about the difference between DTE and DCE speed. DTE is what the computer and modem talk at, which can be 2400, 4800, 9600, 19200, 38400, and sometimes faster. DCE speed for the v32 communications protocol is 9600bps. DCE speed for a v32bis modem is 14400bps. The data compression available with these modems (v42/v42bis) requires that the DTE speed be HIGHER than the DCE speed. So the computer and modem task fast (19.2K or 38.4K) and then compress the data and send it at 14.4Kbps, so it seems like data is being sent much faster than it really is.

You can set your modem to 19.2kbps (19200bps) and it will talk fine to any 14.4 modem. You may want to get HSMODM for the higher speed MFP drivers (that is the serial chip, not the DMA, and centronics is your printer port, not serial) and the RTS/CTS fixes and such. Going above 19200bps requires modifying the circuits feeding the MFP chip.

>i recently plugged a led to the strobe pin and was surprised that it seems to be
>always on high ... |: (not even cycled)
>
>i would appreachite too some advices ...

The Atari printer port has NO automatic strobe on writing to the data port
(the C-64 PIA can be programmed to generate a strobe on write), you have to
put the data to port B of the PSG and then toggle the strobe line yourself
by bitsetting and clearing...
With some careful asm coding you can reach about 100kb per second writing
data on a standard ST. (I used this to fill up a 512kb ROM emulator)

In principle you can connect two ST's with the datalines tied 'one-on-one'
together, but chances are you blow out one of the ports (or both). For
safety I placed some 1k resistores in series with each dataline. You will
have to cross connect the strobe and busy lines.

When using the port for input (with TOS) through the Bconin call (BIOS 2)
the port is automatically switched to input.
The performance through TOS Bios routines is low, say about 1kb per
second...

>Anyone know the answer(s)?

Easiest way is to connect a switch in series with the Monochrome-Sensor
input.
Openup the monitor plug and disconnect the lead that goes to pin 4 of the
plug, put in a simple on/off switch between the lead and pin 4.
A word of caution though, when switching the system to TV mode (switch
open) be sure to switch off the monitor first ! I'm not sure what will
happen if you don't, but the monitor will be fed the same sync signals as
the TV (too low) and could cause harm.
If you wan't to be absolutely sure, use a switch with more poles and
disconnect V-SYNC and H-SYNC too, something like this:

```
ST MONITOR

switch

# UP = TV
. DOWN = MONITOR
.
___
PIN 4 ---------o . o---------- wire connected to PIN 4
.
___
PIN 9 ---------o . o---------- wire connected to PIN 9
.
___
PIN 12 --------o o---------- wire connected to PIN 12
```

I've just installed GCC on my Atart STFM. When I attempt to compile any
C program (say first.c) I get the following error reports:

```
In file included from first.c:2:
e:\\gnu\\include\\stdio.h:85:'fp' undeclared, outside of functions
e:\\gnu\\include\\stdio.h:86: parse error before ';'
e:\\gnu\\include\\stdio.h:87: parse error before '{'
```

The file first.c is just a simple 'Hello World' program. eg.

```
#include <stdio.h>
main{
printf("blah");
}
```

I looked at the offending lines in stdio.h:

```
line no.
84 if defined(__GNUC__) && !defined(__NO_INLINE__)
85 static inline int __getc__(fp)
86 FILE *fp;
87 { int c;
```

As far as I can see, everything is set up OK. My environment vars are
fine. My GNU stuff is all in e:\gnu, includes in e:\gnu\include, libraries
in e:\gnu\lib and binaries in e:\gnu\bin.

What is going wrong? What's wrong with my STDIO.H file? All the library and
header files are the ones which came with the distribution of GCC I'm using.

I've tried versions 2.5.8 and 2.3.3b both with the same result.

In case it matters, my setup is :

2.5 meg Atari STFM with 40 meg Vortex HD.
TOS 1.02 with NVDI 2.5 installed.
I'm calling GCC from the PCommand CLI.

I'd appreciate any help you could give me. Either reply here on the group
or to me personally.

Thankyou very much.

230. Megafile 30 troubles....:)

Newsgroup: comp.sys.atari.st.tech

Yo everybody.....

I have some genuine Megafile troubles....
(You know, those old Atari Hard Disks with the ACSI (aka DMA) interface.)
Mine's pretty old, and it was donated to me by my uncle, so I don't know
everything about it, and don't have the manual (If there ever was one).
The trouble is, sometimes he (it's a male...:) won't start up right.
I can hear (Quite clearly, I assure you...:) the fan starting, but it
sounds like the HD itself wont start. I opend it up, unscrewed
everything, and tested it. The harddisk dit get power, the light went on
(there's a light inside too, does exactly the same as the normal light,
on the front) but it didn't flikker or anything. So I pushed every chip
firmly on the board (without the power, ofcourse) tried it again, no
reaction.
Then I unscrewed the disk itself,(Hey, it's only 30 Meg! Besides, I had
just formatted it, and there wasn't anything important on it,) and tried
all the connections. Unscrewed the tiny board, pushed the chips again,
checked all the connections, found nothing.
So I pluged it in again, and it WORKED!
It's happend about five times, every time it just quits for a while,
seemingly not reacting to my attemps to repair it, and then it suddenly
workjs again!
Does anybody know what is wrong??
I hope so...!!!
thanx... zonny

Message-ID: <Pine.ULT.3.91.950122150524.28843A-100000@zeus.towson.edu>
Source record: 27950

I've been out of the Atari news for a long time now. I've had a Falcon since they were released and an ST for about 7 years. Well, a couple friends of mine are researching into an Internet service provider. Looking to start out small and get it up, then buy a mini or mainframe to expand.

Well, they want me to find out what's out there for the Falcon that would do this. So...what's out there? :) As far as what's available for the Falcon in this area, I'm clueless. So anything you could tell me will be news to me.

Also, out of curiousity...does anybody know anything about linking a Falcon and Amiga 4000 together in this area? My friend with an Amiga 4000 thinks it's possible to to link the two systems together and run them both as Internet providers.

Also...where's the best play to run an ad to sell my Falcon? I gotta get an IBM.

234. How to create /pipe/log ?

>I can hear (Quite clearly, I assure you...:) the fan starting, but it
>sounds like the HD itself wont start.

It sounds like you have a 'sticky head' in your HD, this means that the surface of the HD platter(s) have worn out and the head(s) stick to the surface. Sometimes a little knock on the case is enough to loosen it but it nearly always means that the drive is on it's way to HD-heaven....

When the drive is new, the surface of the platter(s) and the heads are specially coated with a 'non-stick' material so when the drive starts up (and the head is still 'on' instead of floating above the disk), it will keep the friction (and thus wear) as low as possible. But after many starts and stops this tiny layer will wear out and the head sometimes sticks to the platter as a stamp to a letter :-/

It may help using a park program before shutting the system down, I think there is such a program on the older AHDI disks. This way the head will stop on a special landing zone on the disk.

And finally let me guess, is it a Seagate mechanism ? (just curious...)

Well yes it would be nice if I could do it the other way around, but the
sad fact is that currently I can mount TT partitions on my Linux PC, but
not the other way around. There is no good reason for this - I just
haven't tracked the problem down yet. :-(

> Yes - but how does this adaptor know how to present the data to the
> computer?
>
> If it fakes a real harddisk drive it doesn't have to. This would be
> a raw disk w/o a filesystem. The drawback would be that the exporting
> machine won't be able to access the files itself...

Okay - so I can see this working, but yet again why bother? If the
exporting machine can't read the disk, then you might as well just connect
a real SCSI disk instead of this adaptor. SCSI disks are cheap as people
actually have a use for them. An adaptor as you describe doesn't seem to
have a market. Well at least I can't see one.

> PS: Anyone out there know about a source for a DE600 adaptor ? --

Or in my case - the board to connect a DE600 to the cartridge port (or even
a source for the PCB - or *even* a picture of the PCB ;-)

:-)

Roland.

>Of course you haven't TTram, VME. OTOH you have SCSI2, VGA, DSP and so on...

I think you get more for your money with a 2nd hand TT though.

>> It is. The TT is a good bit of kit for both.

>If it has color graphics card - I can agree with you.

I don't think the graphics card is necessary. TT-Hi is hard to beat. Even
the world of PCs and Mac - 1280x960 paperwhite on an 18/19" monitor costs
real money. Okay so 21" colour ones are more the flavour of the day now.

From: joneil@infi.net
Message-ID: <3fuv2m$37k@lucy.infi.net>
Source record: 27958

I have a cartridge for the ST called "DeskCart!" by QMI (Quantum Microsystems Inc.). The owners manual describes this cartridge as a set of GEM Desk Accessories on ROM including a battery operated clock, calendar, notebook, cardfile, calculator, control panel, disk utilities, ramdisk control and more. Sounds great but I don't have the disk software that came with cartridge! I've tried contacting the company but they seem to be out of business. If anybody has this software or knows where I might find it please email me! The files required for using the cart are BOOTCART.ACC and DESKCART.RCS .

Also if I can't find this disk, is there another way to access the cartridge?

Thanks!!

246. Fixing an SC1224 monitor...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-23 06:15:38 UTC
From: gopher@gov.nt.ca
Message-ID: <1995Jan23.061538.17005@gov.nt.ca>
Source record: 27963

Hi, all!

I have having a little trouble with my Atari SC1224 color monitor. I well, sort of destroyed this vital part, see, and, er, well, the thing is, you see, well, it's, er, sort of, er VITAL! I first went to Radio Shack, since they have practically anything. However, they could only help me if I knew the _resistence_ of the part. The object in question is that little plastic screw-thingy in the back of the monitor that changes the vertical size of the screen. (I sort of knocked it out of place when trying to adjust it one time. Flimsy, I tell ya! They just don't make computers like they used to. A silicon chip should be thick enough to stop a bullet, otherwise it's just NOT a silicon chip!)

Anyway, back to the matter at hand. On the circuit board the component is designated as R616, and it has three little pins sticking out of it and a bunch of numbers written on it. I can't really draw ASCII graphics, so I can't show you what it looks like, but if you're familiar with monitors and their guts, then you should be able to help me.

If you can help me, please E-mail me at gopher@inukshuk.gov.nt.ca.

Thanks in advance.

I am thinking of getting off the ST hardware by getting the gemulator. Pity,
some of the neat games will definately not work on the gemulator, otherwise I
would get it and sell off the STs.

You can either ignore the message, or run syslogd from Mintos. It's
the interface for the syslog call.

Just a quick question about using Mint 1.12 and tcsh...

When I run tcsh as a MiNT init program the cursor does not appear on the screen. Only by running certain applications can I get it to reappear. Does anyone know how I can rectify this? Can it be done by tcsh? If not, could anyone explain how I might write some C code to solve the problem.

(Note that I have to run tcsh without GEM to save memory.)

Thanks in advance.

Nick.

Does anyone have, or knows where, I can get details of how to write a program using the Vidi ST. I have written a very limited vision system in STOS using the library supplied, but it is way too slow, and now very hard to track what code is where.

I tried phoning them, but they are always unhelpful, put you on hold for hours, and the say they cannot release details. I have not tried recently but now phone calls cost money, and letters get ignored, it is not practical.

Any help appreciated.

Steve.

Check your power supply (both the 5V and 12V line). They usually start
to drift after a while, and sometimes your harddisk will no longer
get enough power and won't start up. I had the same problem with a
SH205 way back when... when... well, in ancient times 8-)

I know a source for *expensive* DE600's ($280) here in Germany. If anyone wants to know this I can look up the address. But I'm sure you can get it cheaper somewhere.

The PCB's are available as HP plotter files from fortec.tuwien.ac.at. You can use GNU's hp2xx-3.1.4.tar.gz (available from every GNU site, eg. gnu.ai.mit.edu) to convert into something printable.

You could ask Peter Mayr (pm@fortec.tuwien.ac.at), the author of the adapter hardware, whether the board is still available (it was in the past for few bucks).

The driver for the DE600 is contained within MintNet 0.7, which is available from my WWW home page from now on and should appear on a.a.u.e these days.

Hi,

I haven't been using STs regularly lately but I recently picked up a 1040STFM and have been trying to get it working with an old SM204 hard disc. The problem is that the hard disc has a boot sector set up for a much older version of the machine and, for some reason, it bombs on the new machine. I now find the floppy on which I believe the boot intall program used to exist is unreadable. Can someone point me at a current copy of a program to install a workable boot or alternately to invalidate the boot sector so it can be booted from floppy? Otherwise I'm probably going to have to write a little program to invalidate the boot.

I _can_ access the disc alright if I switch it on after booting up the 1040 and then run adhi from floppy. This is obviously very clumbsy though and, since the system is intended for my mother, probably too clumbsy.

Malcolm

Yes I've tried virtual memory. I keep on trying virtual memory. But, half of
my software crashes with the demo version of Outside installed (bus errors)
the mint-net software seems to make outside crash on paging and GNU C doesn't
work with it. So I'm not going to buy the full version. Instead I'm waiting
on a loan to put in a 16Mb RAM board.

Well its the TU-Wien stuff I'm working from. I have 1 .IMG file and 3(?)
.HP files full of plotter commands. Although I have no use for the
software, the newest version of MiNT-Net apparently has a driver for a
DE600 using the TU-Wien interface board.

Today I tried a sharware package (PRINTGL) on my PC which can display the
.HP files, and they are indeed the PCB masters that I thought they were,
plus the original circuit diagram which is also in the .IMG file. There
is also a block diagram (in a .HP file) which shows which chips plug where.

I'm still interested in speaking to anybody who has built this board,
especially if they can sell me a pre-made PCB.

> PS: There is ka9q giving SLIP for the ST, but is there a PPP package
> ? I didn't get the SLIP on my unix machine to work at all...

I though KA9Q did this anyway. And also MiNT-Net does PPP AFAIK (though
I'm using CSLIP).

:-)

Thats expensive. I'm sure I've bought them *new* less than that! I think my company might be prepared to part with one for a small fee if I ask them nicely. We did use them alot, but now use DE620s and Longshines.

> The PCB's are available as HP plotter files from fortec.tuwien.ac.at.

271. rsrc_load() quirk?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-25 03:15:56 UTC
From: Desmond_Liu@mindlink.bc.ca
Message-ID: <63513-791003757@mindlink.bc.ca>
Source record: 27987

Although this question really belongs in comp.sys.atari.programmer, I can't receive this newsgroup so this question is going here in comp.sys.atari.st.tech.

I've written a simple GEM program and I seem to be having a problem with rsrc_load(). Basically, my source code looks like this:

```
if (rsrc_load("nhl.rsc") != 0)
{
/* abort program -- can't find resource file or out of memory */
}
```

What I find strange is that rsrc_load() returns the value 1 on my old TOS 1.2 Atari 520STFM. However, on my TOS 4.01 Falcon, rsrc_load() returns the value 0. According to the Atari Compendium, rsrc_load() should return a 0 if it successfully reads in the resource file.

I've ruled out the possibility of (a) rsrc_load() not finding the resource file and (b) insufficient memory on both machines.

Am I missing something here? Is this a known problem in TOS 1.2? If so, how can I code around this problem so that I can correctly cleanup and exit if rsrc_load() fails?

Desmond

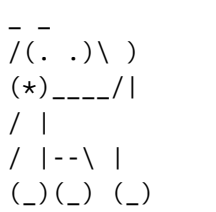
Do you have some asm. source to do this that you could share? Please =8-]

>In principle you can connect two ST's with the datalines tied 'one-on-one'
>together, but chances are you blow out one of the ports (or both). For
>safety I placed some 1k resistores in series with each dataline. You will
>have to cross connect the strobe and busy lines.

I have my ST and 130XE (8bit Atari) connected up with the 8data lines going
to the 8data lines on the 2 j/sticks of the XE (i.e. 4lines each), which
are port A of the XE's PIA chip. I use the 8th bit as a sort of strobe -
I set it low with the data on pins 0-6, then set it high, then low again.
I found this was ideal as the pins seemed to require time to settle - that's
how it appeared anyway. I presume I needed to hook up the grounds too so
that they have the same reference (or something), which was a pain, as then
I couldn't use old joystick cables (which don't have ground connected).
I have a switch that goes across the BUSY line and ground - so that it's
either ground or floating (seems to work ok).

>When using the port for input (with TOS) through the Bconin call (BIOS 2)
>the port is automatically switched to input.
>The performance through TOS Bios routines is low, say about 1kb per
>second...

Yeah - I get about 290bytes per second - which is actually 290*3 (as I send
the byte 3 times with the MSB toggled (as stated above).



This works most of the time - occaisionally I need to re-transfer stuff,
but it has worked and once "warmed-up" transfers without error.

Is there a way to bypass the routines? Do I just write directly to the chip
or something? Is there a vector or something? Or is the chip in the same
location on every 16/32 bit Atari? And once again, would you happen to have
any source for this?

One last thing, I unfortunately have to change the BUSY line by hand (switch)
this means that I can't send data in the opposite direction automatically,
e.g. for ACKnowledging data...

Your advice is appreciated,
Richard =8-]

273. SM204 autoboot help needed

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-25 08:41:26 UTC
From: malcolm@pigsty.demon.co.uk
Message-ID: <73055810wnr@pigsty.demon.co.uk>
Source record: 27988
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

(Sorry if this gets double posted but I thing my news system lost my first attempt.)

A few years back I used to program an ST profesionally though I've since been forced into the clone camp. Anyway I recently bought a second hand 1040stfm for my mother, thinking that I had lot's of software and a hard disc I could let her have.

I have a problem though with the SM204 hard disc. It appears that the boot sector I put on it many years back is either corrupt or incompatible with the 1040. If I switch the ST on after the disc is up to speed it bombs and locks as it tries to boot. I can access the disc OK by powering it up after booting and running the driver from floppy.

Obviously I need either to put a valid boot program on the hard disc (my first choice) or, if necessary, invalidate the one which is there. The trouble is that I can't locate the little program which set up the boot sector. If the worst comes to the worst I'll have to write a little program to clobber the boot (invalidate the checksum) but someone must have a copy of the boot sector program out there. I've looked on several archives without success - I can't use archie because I've no idea of the filename.

In article <3g47sp$93o@status> mbecroft@iconz.co.nz (Mario Becroft) writes:

How do I call GEMDOS using the dos_tab entry in the kerinfo structure
passed to the XFS driver by MiNT at beginning of XFS initialization?
Is it an array of pointers to function or a single entry point, and do I
need to pass a function number to it?

Just call it like any other function on which you got a pointer...

I am using Lattice C 5.6
Some sample code in C or Assembler would help if possible.

Ok, lets call s_yield(), which is the internal name of what gets called
when you call Syield() via Trap2:

```
(*dos_tab[0xff])();
```

That is all. In fact, the pointer does not point to a dispatcher, but to
the function itself, as the trap 2 dispatcher itself uses this table
to determine the function to call :)

Oh, one thing is there to watch for: use stack parameter passing for
these functions.

Regards,
Ulrich

I am suffering the above problem too and _HAVE_ run minit. I can save files with the same name as those in the gcc261?.zoo file with no problem but trying to extract them just doesn't work!

It happens when 2 files with the same name upto the eighth character are in the .zoo file. For example :

bighugename.h <-- extracts
bighugenameagain.h <-- skipped ????

(But were I to do: echo 'test' >bighugenameagain.h
this would work!!!)

Any ideas???

: Also does anyone know the max transfer rate for the port? And does it use
: a PIA, or some other chip?
Let's have a look into the "Profibook", the german ST bible (short version):

On the parallel port (parallel, _NOT_ Centronics, because some lines f.i.
Papaer out are missing) you have the following lines:

pin 2 - 9 : DATA #0 - #7
pin 1 : Strobe out
pin 11 : Busy in
pin 18-25 : Ground

The data lines are generated by I/O-Port B of the PGS (Programmable Sound
Generator).
The data strobe out line is genarated by I/O-port A bit #5 of the PSG
(remember: counting bits starts with #0 !!)
The busy in line is connected to I0 (Input #0) _AND_ TAI (Timer-A-Input)
of the MFP (Multi-function Peripheral), 1kOhm pull-up to 5V.

The strobe line informs the Printer that the data lines are valid. Data
is taken with the raising strobe signal. The strobe line has to be set by
the program, it is _NOT_ genarated automatically.
The busy line informs the computer, that the printer needs some more
time, i.e. busy doing something.
You can read out the busy line or have an interupt genarated.

The port can be used for both directions !! (To my mind, PCs are not able
to do so)

Output _AND_ Input via the parallel port is fully supported by the system.
You can use the BIOS functions Bconout (BIOS #1) Bconin (BIOS #2) and
Bconstat (BIOS #0) with device 0 (= PRT = parallel port)
The transfer rate is about 4000 bytes/second.

Each line is able to drive one standart TTL load.
You get problems with some older printers, because they might have to low
pull-ups to 5V, so the current needed to force a data line becomes to

high for the PSG (current should be lower than three mA).
Attantion: On the power up of the ST port B of the PSG is set to output!
The line are set to low.
So if you want to use the parallel port as a input device, the sender
mustn't make a connection before the parallel port is set to input.
Otherwise you will get a conflict if one of the lines is set to different
voltage (by the sender and by the not-ready-or-not-configured ST).
The first thing that will happen is having a reason to go to your local
electronic shop... i.e. your PSG is blown away (not _blown_ away, but
fully out of order).

Hope it helps
Sorry for my english

Martin

I had this problem, specifically with the man files.
I used a version of zoo for minix (available on a.au.e) which worked.
There is also a mint aware version of zoo available, you could try this.

Your disk controller (the board you unscrewed) probably has
some faulty soldering on a chip. What you do seems to restore
a contact that goes wrong after a number of thermal cycles.

Yes, it works fine. My advice would be to fish around for the one that is
software switchable if you are going to do it. Some faxmodems object to a fixed
port speed when they are faxing.

> Second, when using a 14,400 baud modem.. is this going to be of
> any use to bother doing??

If you receive anything that is uncompressed then you will see a difference as you be
limited to around 1920CPS due to the port speed. With an upgraded port
you will get in excess of 3000CPS if you have you modem wired correctly and are
using a decent serial patch such as HSMODEM.

Problem solved - get bmintzoo.zoo from Umich - or from one of its mirror sites
- eg. src.doc.ic.ac.uk/packages/atari/umich/
the path you want is Mint/Utilities/bmintzoo.zoo

This version works fine - I think it might be because this version was
compiled with the MiNTlibs and the other version isn't (just an idea).

Thanks to everyone who answered.

Adrian

Nope.

[MagicMacFAQ on]

Q: Which computers work with MagiCMac?
A: MagiCMac works with all Apple Macintosh computers with a 68030 or 68040
processor. For example, Quadra 700, PowerBook 150, Duo 270c, Performa 475
or 630. You should have at least 4 MB RAM available. With this
configuration you will only have 1.5 MB under MagiCMac. For convenient
working we recommend 8 MB RAM.

[off]

>I can get one pretty cheaply but my decision to buy it or not depends
>largely on whether it will do what I'm asking.

So don't by it then.

>Also, any ideas on what a 68HC000 processor is?

The CMOS-version I'd guess.

Are you using a MiNT aware version of Zoo? Try Mint/Utilities/bmintzoo.xxx
on atari archive.

This might be a problem which some older drives tend to get overthe years.
When the drives come out of production, the surface of the disks are roughened
to a certain extend.

During usage the surface gets smoother and smoother. If the heads land on such
an area they might stick together. This is the adhesion phenomenon. (or was it
cohesion? I always mix those up.)

If this shuld occur again, try to shake the drive a little or give it a little
clap on the side. This should break the heads loose.

I wouldn't store any important data on this drive anymore. It'll brake totally
if this happens too often.

295. Laser Brain Emulator

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-26 04:28:43 UTC
From: renfro@bnr.ca
Message-ID: <3g78dr$edg@crchh610.bnr.ca>
Source record: 28014

Anybody familiar enough with the Laser Brain emulator to tell me how I can get it to work at 24 pin resolutions? I've read the docs over and over and it seems that it should be able to better than standard Epson 9-pin mode, but I can't figure out how. I've tried various Epson drivers, but can't find one that prints correctly. Anyone know a higher resolution Epson printer driver that works with Laser Brain?

Btw, I want to get this working so I can run my 486 serial port into my MegaST serial port and print on my SLM804.
I have this working for the MX-80 driver in Windows, but of course it looks like a 9-pin printout. Other Epson drivers don't seem to work at all.

Any ideas or suggestions greatly appreciated.

> looking for a bigger one...:)...?

No, I don't know the limit, but my guess is you won't be able to find a really big one. The largest I found was a 60 Mb, currently sitting in my Megafile 30. The 60' does need more power, you might run into problems there. I fixed it more or less by replacing two capacitors: the power supply now just manages it, after it's been on for 15 minutes or so.

If you need more help, email me on 2:281/202.11

Buzzzzz. Wrong conclusion!

The MAC PB's with 68030 aren't all that expensive at all. Especially the used ones.

And they're most definetly a better buy than a lame ST-Book anyway.

It's DIN!!
The video connector is a DIN-13 and the Floppy is DIN-14!!!
The Atari is actually the only machine I've ever seen using these.

If you stick to pre-compressed files a DTE of 19k2 is just about fast enough.
As soon as you start transferring *uncompressed* stuff, you loose a lot of
speed. The modem is waiting for data to be transferred.

> First is there anyone out there that has made this change and does
> it work really well??

I haven`t done it myself, but I know that most people that have are very
satisfied with the modification. The main problem as I see it is that
it`s hard to get the ST to keep up with a full 38k4 connection.
With some programs you will probably experience overrun problems and
other problems related to loosing bits or bytes. By using a good ROM-
patch (like HSMODA), a fast terminal-program and a sheilded and not
too long cable between the modem and the computer will probably give
you very good performerance after the modificarion.

> Second, when using a 14,400 baud modem.. is this going to be of
> any use to bother doing??

If you only download compressed binary files you will have little use
for it since you`ll never hit the roof (19k2) while transferring such
files. OTOH, if you often surf the net, read things online, cruise a
lot between menues on your favourite BBS or download a lot of uncompressed
text-files then you will definately find upgrading worthwile.

Good luck!

DIN 13 PIN. It is possible to get hold of :-) I've seen it used some other
places too (digitizing boards for AutoCad, synth-modules)...

306. HELP! I killed 1040 w/a Link2

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-26 20:38:31 UTC
From: mfogarty@netcom.com
Message-ID: <mfogartyD315C7.Err@netcom.com>
Source record: 28024
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

My Friend is setting up a multichannel sampling system (Digital FX) on
his 1040STf. This system requires a min. 20msec access SCSI drive
(for direct recording of sound). I found and purchased an ICD Link2.*
While trying to make it work with two different (known working) SCSI
drives I seem to have killed it.

Now, even with the Link2 disconnected, on a totally minimal system,
the CPU powers up showing a variable number of bombs (~2-12) or
shows no bombs at all and just hangs.

During the several times that I was able to boot (before the above-
mentioned total failure) I used ICD's software to scan the SCSI bus
and never saw the drives. I tried scanning for the drives both
with drive parity enabled and disabled.

Please help! Either by direct mail or followups here.
1. Is the system recoverable?
2. What is the problem with the Link2?

Thanks,
Mike Fogarty

TOAD COMPUTER lists both a T28 board and the PAC 68030 boards.. not cheap really but I would assume that they are good. I think the PAC board to be better... they are both out of the UK... but the pricing seems good on these from TOAD.

They are DIN standard, not very common but still...

I quite sure that thy are available from the swedish electronics company Elfa. They are a bit expensive but, they have both the screen connector and the floppy connector.

I cannot recall their adress right now, but let me know and I'll post/mail it.

Most probable cause is 12 V supply being not quite good enough due to aging of the power supply unit's capacitators (lowers real C value causing greater line ripple and lower effective voltage). HD unit will not start unless 12 V is "good enough". Since the ripple is also a function of load, which varies in a temperature dependent way, you get sometimes no (usually when the HD is just turned on), sometimes yes (when the circuits might be warmed up, the mains voltage a bit higher, the cat not playing with your toaster. and other possible factors).

(Other often heard answers to this kind of problem involve "sticky heads", "worn out bearings", and other unusual causes...)

In general a zero return value indicates an error (= FALSE) and non-zero for error-free completion of call, usually -1 (= TRUE). Most programming references I checked just now on this bear this out for all the RSRC calls. The Compendium seems to have turned some of this around. What are the chances that TOS 4.01 did this mistake too?

I wouldn't swear on this, but I think that it was designed as a 9-pin emulator only. The program is quite old, "Lazer Brain" being merely an English version of the older German "FX-Treiber" where the name says it all, i.e. FX(-80) Epson emulation = 9-pin.

>if it successfully reads in the resource file.
The Atari Compendium is wrong here - there are many errors in the book. A
list of addenda is available.

rsrc_load returns non zero if successful and 0 if an error occurred.
rscr_gaddr returns non zero if the address is valid and zero if the object
does not exist.

I'm looking to add a SCSI tape drive to my TT and STM. Is there a FAQ?

If not, I'd be very greatful if people would post or email details of which drives, interfaces and software they use. If they also use the drive to back up a PC, then I'd be interested in this info also.

Thanks

:-)

Roland.

I assume you're talking about AHDI 6.06. Version 6.06 did have
to timeout, but 6.061 fixes that and a few other problems with 6.06.
It has little to do with the conversation, but I thought it might
help. As for the previous problem, installing AHDI once again might
solve the problem.

I use an Archive Viper 150 (which is actually 250MB with the right tapes).
It works on my Falcon, and worked on an STe when I had one. I use DB3 to
do my backups.

When I had the STe, I used to transfer stuff to/from Suns using GNU tar
with TapeBIOS on the STe, and tar on Unix.

The ST video and Floppy drive connectors are 13 and 14 pin DIN sockets, a full range of these connectors is available from Maplin Electronics in England.

They do snail mail-order for overseas customers. Their UK telephone number is 01702-554161.

The following items are available

13 Pin DIN Plug order code JW95D Price £1.54
14 Pin DIN Plug order code JW96E Price £1.89
13 Pin PCB socket order code JW99H Price £1.39
14 Pin PCB socket order code JX00A Price £1.49
13 Pin in-line plug order code JW97F Price £1.69
14 Pin in-line plug order code JW98G Price £1.99

I hope this information is useful.

Its in the TT or MSTE you buy to upgrade from your STM ;-(

These cards sound quite good - but I reckon I can get a DE600 for about
the same price. The disadvantages is that a VME connection is better than
the DE600 parallel connection. The advantages is that there are supported
drivers for the DE600 (for MiNT-Net at least) and that a DE600 is of use in the
PC world so has some residual value.

What is with all of these "for sale" and "auction!" posts which are

all double spaced!?

I mean, is it something with Usenet that when it sees "for sale" in the

subject line, it has to double the height of the post? Or are all of

these posts from the same person? Or maybe it's a PC thing with the

useless LF characters.. Man, PC ASCII is OUT OF >DATE<!

Beric Dunn (bericd@hawkeye.bri.hp.com) wrote:
: I have just installed the PAK3 into my Atari, but have the following problems:

: 1) The 32 MHz option always fails to reach GEM - this I think is due to the
: slow driver chips on the ST motherboard - 2 of which I've changed the other
: 2 will be changed tonight when I get the chips.

: 2) In the 16 MHz mode boot-up is OK but I can't read data off the floppy. An
: error message (In German) comes up and as I don't speak the lingo I'm not
: sure if it's saying data is damaged or there is no disk. The disk does try
: to seek, and if the computer is powered up without the drive connected no
: icons show - hence it can tell the drive is there. If I remove the PAK and
: plug the old 68000 back in all is OK.

: Is the PAK trying to clock the disk controller at 16 or 32 MHz instead of 8?
: This would surprise me very much, but I do not have ready access to a 'scope
: to check this. Or is it simply the buffer chips being too slow?

: I would like to hear anyone else's experiences with the PAK board as far as
: installation and setting up goes.

: Beric..

: BTW: My hard disk fails to autoboot even at 16 MHz - could this be TOS3.06 or
: is it more likely to be the buffers once again? The reason I suspect that
: it may not be the buffer chips is that the ST RAM check works - although
: not as fast as on a TT.

Since writing this post I have replaced the drivers on my motherboard
and all is now OK - The hard disk even autoboots, and at 32 MHz the
computer seems to fly - and with an FPU CBZONE (Battle Zone) flys!

I am now going to get a 50 MHz clock driver to see what happens!!!!

Beric..

Here in the UK, Maplin Electronic Supplies sells both the 13-pin and
14-pin plugs and sockets and lables them as "Used in the Atari ST's Disk
drive/monitor port but may find other applications..." I can post their
address if you like. They also stock the in-between sizes from 2-way
upwards and the mini-DIN style connectors used on PS/2 mice
(mouses?) on PCs.

SCSI-drives should work on any SCSI-equipped machine. The software is likely
to be a problem.

For the usage of any SCSI-streamer I strongly recommend *GEMAR* by Steffen
Engel (steffen_engel@pe2.maus.de).

This brilliant peace of software works on all Ataris (including Medusa,
excluding MAC's with MagiCMac) and can be configured to work with a broad
variety of streamers. GEMAR is shareware. I believe it can be found on all
major ftp-sites.

Source record: 27897

IMPORTANT, Regarding the text on the top

Recently I got lots of E-mail regarding my text above. So to prevent further misunderstanding, I felt it was needed to write an explanation.

I did buy cracked version of Aura, but from friend, (who by the way is not a pirat) because the program wasn't available for me in any other form (that's why I need the address). Knowing it doesn't work, I used it as a demo (to see how it looks, capabilities, etc.) and I'd really appriciate it if anyone would give me C-lab's (and other's - Sensible Software, Renegade) contact address so I could write them for a catalogue and the program.

In Croatia there aren't any specialised disk shops or even something similar where one could buy desired software for Atari (if there is one or more such places in Croatia or Slovenia please just write it under these text). You'd have to go to another country to buy software. So I'm depending on you, who read this text.

If I get any address I'll give it (them) to computer magazines that are going out in Zagreb so they could publish it (that is, of course if you agree), because when I asked them they didn't have a clue.
I am sure there are many people in Croatia interested in how to order or where to buy original software and would be greatfull for such information.

My appologies for the misunderstanding I caused with a text above. It was miswritten due to a shortage of time and my lack of knowlidge of English language.

Greetings to people of C-lab, Renegade, Bitmap Bros., Langkhor and Sensible software to whose software I'm looking forward to enjoy.

Awaiting for your response !

P.S.: In countries like Croatia people learn more quickly how to appriciate software, because it's hard to find.

Hello to all printer gurus out there..!

I have just completed my ST system with the addition of the missing link, a printer. It's only a small 9 pin dot matrix, but it'll do for what I want.

Now, how does the ST deal with printer drivers ? I'm used to such stuff on the PC, but how do I get my printer to change fonts, go to NLQ mode, etc etc. It is a Philips NMS1438, but according to the menus it prints out, it will emulate an EPSON FX-800 and an IBM PROPRINTER XL.

I don't yet have the manual for it, but it is being sent to me soon.

How do these things work with STs ? I know that the standard Atari control panel only lets me change a couple of things, and I'm not sure if even they work ! I do have Neodesk 4, so I suppose I could use the 'MAKEPRN' program to create a driver, but I don't really use Neodesk that much, preferring Teradesk [it's faster], so for most purposes any driver created with Neo wouldn't be used.

Apart from that, how do I tell the Atari to use a printer driver ???

Thanks in advance.

It works on my system, but all the keyboard bindings are wrong (no cursor keys, delete etc). There was a message in either here or c.s.a.s a week or so ago saying how to fix that using xkey.

I also get a message about it not finding various files, it's looking for them in /usr/lib I think. This doesn't seem to matter too much though.

>Does anybody know what is wrong??

Our Megafile 30 has a similar problem. A procedure that seems to work is, when it fails to spin up: turn the drive off, pick it up, "twist" it in the air about the vertical axis, put it down and turn it on again.

You have to twist it somewhat violently, and I'm sure it can't be much good for the drive, but it seems to work. We think the problem might be that the axle bearings are sticky... Maybe there are ball-bearings inside which have worn to an oval shape or something!

> up a PC, then I'd be interested in this info also.

I`ve got a Wangtek 6130HS (4mm DAT) mounted in my Falcon and it works
great most of the time. The only software I`ve tried so far is Erling
Henanger`s SCSI-drivers for MiNT. They give me a /dev/tape which I can
use like this:

```
# tape -r (this command rewinds the tape)
# cd /
# tar cvf /dev/tape usr/* home/* var/* src/* etc/* &
```

Erling`s drivers are "universal", meaning they can be used together with
many different units without having to be configured for each unit. If
you are running MiNT then ehscsi05.tgz is the file you should be looking
for! :-)

Unfortunately my Falcon suffers from SCSI timing-problems and sometimes
the whole system just hangs while backing up. I`m waiting for a new
motherboard which I hope will fix this problem.

However, if you don`t like MiNT there`s at least one other alternative.
The program is called GEMAR (v2.20 is probably the latest) and is
supposed to work great with a large number of different drives (not just
DAT-drives). I haven`t tried this one out myself, so someone else will
have to fill you in on the details.

Roland Givan <rgivan@cix.compulink.co.uk> wrote:
>I'm looking to add a SCSI tape drive to my TT and STM. Is there a FAQ?
>

Roland,
I meant to write one after my ordeal of getting one set up, but there's not a lot to it. Here's the major points:

1. Any SCSI tape drive seems to work with either the ST with a SCSI host adapter or straight from the TT/Falcon SCSI port. I uses a viper 2150 1/4" tape drive (up to about 250 MB, which is great cause I have a 245 MB drive).

2. Two commercial software packages seem to be out there to support a tape drive on your Atari: Diamond Back 3 and Beckemeyer Development's Hard Disk Toolkit Plus SCSI Tape Kit. Diamond Back 3 is available from Oregon Research Associates ((503)620-4919, on Genie at B.LUNESKI1), and I have no experience with it. I've used Diamond Back 2, and found it to be ok.

The Beckemeyer was the only commercial tape driver out when I bought my tape drive, so it's the one I went with. I had a little problem with the installation, and you have to load the driver in after Speedo, but it works. They also give you a TAR program that reads and writes in Unix TAR format (makes for great ease when bringing home large files ftp'd off the net). The software restores and saves flawlessly, although it is a very simple interface and cannot handle the simplest of errors (e.g. the program exits if you try to write to a write protected tape). The packages are not integrated, either. You have one program to back up with, one to restore with, one to rewind and retension with, etc... But it does seem to be complete. Using a shell with MiNT, you can run backups in the backgroup, and I'd be willing to bet you could back up a Minix file system using the TAR porgram. Beckemeyer Development can be reached at (510)530-9637 (voice), (510)530-0451 (FAX), or (510) 530-9682 (BBS), or at "Beckmeyer Development; PO Box 21575; Oakland, CA 94620; USA".

3. The terminator may or may not be needed. I use a AdSCSI+ host adapter, and nothing worked when I put the terminating resistor pack on. The moment I took it off, it worked great. So if whoever you buy the tape drive from offers to terminate it internally, decline and ask for an external terminator instead if you need it later.

That's all I can think of off the top of my head. The tape drive was a good investment, and it allows you to repartition your drive easily. If you

have any more questions, post 'em here or email me. It sure beats backing up to floppies.

Hi,

I was wondering if some one tried to connect
more than one IDE drive on a falc. (so I can
connect a cheap PC drive as 2nd drive).
Is the IDE cable a standard one which can
be replaced by one with 2 (or more) connectors.

Can some one who has done this tell us what is needed?

Thanks Paul Janson.

346. Second Internal Floppy Errors

Newsgroup: comp.sys.atari.st.tech
Date: 1995-01-31 11:20:39 UTC
From: emdu02@castle.ed.ac.uk
Message-ID: <D39oun.4wC@festival.ed.ac.uk>
Source record: 27915

Hi, I've a problem with a second floppy I've connected. I'm using a Desktopper with the second
floppy cable - the ribbon that goes from the Shurgart bus to both floppies, with one wire cut off
after connection to the first drive and connected to pin 19 of the soundchip for drive select
(I've forgotten which number). The problem is this:

Drive A B Reads
Disk In In B
In Out A
Out In B
Out Out Normal Error

This is whenever I try to access drive A or B from the desktop. The ribbon seems alright, tested with a ohm meter, and System Solution have been a bit slow in responding. Also both drives
spin at once. Basically the preference is always for drive B.
Any help would be greatly appreciated.

Alan.

I believe there is an auto program you can get which does this, though I know not its name. Sorry. I disconected mine when I installed an FPU, you can just unplug it, no need for snipping :)

Toad Computers sells Viper 250MB drives for $379, and 525MB drives for
$499. We recommend the use of DiamondBack 3, which is $59.

Please contact me if you're interested in getting more information
on these products.

GDOS is what you need. SpeedGDOS 5.0 is the latest and best, able to use gem fonts, speedo fonts, adobe type1 fonts and true type fonts although there is NVDI which handles fonts(adobe, true type, +...?) - but someone here will know whether it can handle printing, Hmmm actually I've seen some remarks about creating printer drivers with/for NVDI, so you must be able to. You run GDOS by putting it in your auto folder soit runs at boot up, although I suppose you could run it any time. Other here will correct me if I am incorrect <g>, and choose your printer, Epson is pretty standard so there should be no problem there, Speedo uses an extend.sys file in the root direcory on boot-up. Your fonts are in your assign.sys file, loaded at boot up from the root directory

>Apart from that, how do I tell the Atari to use a printer driver ???
>Thanks in advance.
Its not Atari so much as the software you'll be printing from that you'll be concerned with. CalamusSL for example has its own printer drivers, and a utility to create printer drivers also, but it doesn't use GDOS so it is a special case.
I'll e-mail you the GDOS FAQ just shown here last week

It's really easy just to open up your Falcon, and just take out the speaker
(it's "plugged" in). That's what I did. :)

Using Geneva is the only way that I've seen so-far. MagiC will probably
offer the same capability in the Falcon version as well.
I could also recomend that you consider a resolution enhancer such as
Screen Blaster II (which I own, and I am very fond of) or Blow Up, or even the
Speed/Resolution Card. (I think there are others too.) The S.R. card will
even give you an 80 column Truecolour on a VGA screen.

I have been battling to get NVDI and Speedo GDOS to behave properly when running Atari works on my Falcon, 4Mb TOS 4.01.

I have successfully installed the former two to run with the latter on my 4Mb TOS 2.06 STFM and it works great. I installed Works on the Falcon in exactly the same way as the STFM with no success to an almost bare root directory and AUTO folder. The only things resident besides NVDI and SPEEDO are BCONMAP FIX, FPATCH 2 and XControl.

When I run works everything seems ok until I load a document then I am confronted with pages of invisible text that I can print to the printer but not see. I think something is clashing with SCREEN.SYS or the like.

On both systems the installation was as follows:

Install SPEEDO with all fonts and drivers into the DRIVERS folder (to ensure everything can be found when NVDI is running) using the supplied install program. Then I install NVDI using the supplied installer and I am given the prompt saying 'the assign.sys file uses the DRIVERS path so why don't we use it to for our SYS files etc.!' and OK that.

I've tried the GDOS on and off in NVDI and tested it with and without the various other options.

This has been a real pain in the butt so any assistance would be greatly appreciated.

Post to the Newgroup by all means but please also post to my e-mail as I am on vacation at the moment and don't use the net that much.

cheers,

Anthony Green

>will start to look a bit more promising.

There's a program, I believe you can find it on Atari Archive, that writes
a bootsector to a floppy which will turn off the internal speaker. I
believe it is ZIPped together with another program which can be run in
the AUTO folder or manually activated which will turn off that godawful
tin gerbil Atari installed in our machines.

Look for something called SPEAKOFF.ZIP (I think...)

>PS don't tell me to use the control panel pls :-)

You could always used the control panel...

362. How to use a printer switch with a mega-2

Newsgroup: comp.sys.atari.st.tech

Hi everybody,

I've got one hell of a problem.
I have one PC (I'm sorry) and one Mega-II and one deskjet printer.
I bought a printer switch (automatic) to hook both machines to the
printer. The problem is that the PC prints allright through the
printer switch but my Atari doesn't!!! Not from the desktop
and not from Wordplus.
I do want to keep using both of my machines, but how?
What do I have to do to hook up my atari correctly to the
printer switch?

My TOS is dated 1989

Please answer by email, since I am not able to read the
atari newsgroups on a regular basis.

Leon

When using BlowUP030, you can use the 8x8 style gadgets (select double
line on and 40 columns text), as you'll get the resolution you
selected with BlowUP, not the one you'd expect from the menu.

367. Re: Second Internal Floppy Errors

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-01 13:02:26 UTC
From: dba@jet.uk
Message-ID: <3go0p2$bqf@postman.jet.uk>
Source record: 27932

```
FLOPPY DISK DRIVES

Using external floppy disk drives with the STe computer:

Most standard 3.5 or 5.25 floppy disk drives can be connected to the STe
computer. To use High Density drives requires some work on the ST P.C.B. and
a faster floppy controller chip. A total of only two disk drives may be
connected one internal and one external drive.

Jumpers:
STE internal jumpers W300 1-2 and W301 1-2
external 14 pin FD connector (as shown in the documentation)
pin 5 Drive Select 0 ---- Floppy disk jumper DS0 (Disk drive A)
pin 6 Drive Select 1 ---- Floppy disk jumper DS1 (Disk drive B)

STE internal jumpers W300 2-3 and W301 2-3
external 14 pin FD connector (the default shipping config)
pin 5 Drive Select 1 ---- Floppy disk jumper DS0 (Disk drive B)
pin 6 +5v via 10K resistor ---- not used

Connectors:
34 way connector on floppy drive (5.25 card edge - 3.5 pin header)
.___.
Ground 0v 1| |2 Reserved (High Density Detected on some HD drives)
Ground 0v 3| |4 In Use/Head Load/Open
|---| keyslot only on 5.25 disks
Ground 0v 5| |6 Drive Select 3
Ground 0v 7| |8 Index Pulse Sensor
Ground 0v 9| |10 Drive Select 0
Ground 0v 11| |12 Drive Select 1
Ground 0v 13| |14 Drive Select 2
Ground 0v 15| |16 Motor ON
Ground 0v 17| |18 Direction IN Select
Ground 0v 19| |20 Step Pulse
Ground 0v 21| |22 Write Data Pulses
Ground 0v 23| |24 Write Gate
Ground 0v 25| |26 Track 00 Sensor
Ground 0v 27| |28 Write Protect Sensor
Ground 0v 29| |30 Read Data Pulses
Ground 0v 31| |32 Side ONE Select
Ground 0v 33| |34 Drive Ready
---

All signals are active LOW ie the signal is normally high (for example to
switch the Motor ON signal active, pin 16 should be connected to 0 volts).
So be careful plugging in the cables.
```

Male Power connector on drive
3.5 5.25
---.
|o / o | pin 1 +12 volts DC (may not be required by disk drive)
|o | o | pin 2 0v
|o | o | pin 3 0v
|o \ o | pin 4 +5 volts DC

Cable connections
14 pin STe 34 way IDC
pin no pin no
1 <---------- 30
2 ----------> 32
3 ---------- 1,3,5,7 etc (any odd numbered pin)
4 <---------- 8
5 ----------> 10
6 <---------- 2 (for use with a High Density Drive?)
7 ---------- 1,3,5,7 etc (any odd numbered pin)
8 ----------> 16
9 ----------> 18
10 ----------> 20
11 ----------> 22
12 ----------> 24
13 <---------- 26
14 <---------- 28

The terminating resistor pack on the floppy disk drive may have to be removed.

Note: for use internally on the floppy cable connect all wires to all connectors
and change the drive select jumper on the floppy drive.
ie. for "A" set Drive select 0 (DS0) for "B" set Drive select 1 (DS1).

You can get various S/PDIF interfaces here in germany.
There's the Soundpool interface (FDI) which is the same
as the Steinberg interface, then there's one from Compo
and - of course - PSI from BlowUp which I am using.

I can only tell something about the PSI. It works.
That's the fact. It does what it is demanded for.
You have a coax and a optical input, if you have only one
source connected it will be recognised automatically.
You can also tell the source by software.
You have two outputs (optical and coax) both fed with the
same data. You can set SCMS on internal DIP's (00,01,10,11) !

Haven't had any problems with it but I could only connect it
to my CD Player (nice thing: shows Emphasis on a LED) though
I don't know which DAT to buy yet. Ah, DAT. There's another thing:
PSI comes with a DAT Bakup Software. Looks quite good but I
couldn't check it (no DAT). But it has a nice feature:
the newest versions of PSI (so is mine) comes with a IR
remote control for the LAN port. This way the bakup software\
can remote control the DAT player. A real nice feature I think.
And it will be easy to use it for other things (CD, Tape, etc)
in other programms. Just waiting for the documentation...

I think this should be a short overview on PSI, if you need
more information or if you have a special question - just ask.

Oh yeah: the information that might me interesting for you:
PSI costs 448 DM, FDI (Soundpool, Steinberg) ~600 and
Compo's `500 DM

That's why I bought PSI.

Alex

PS: $1 should be about DM 1.6; don't know where the GBP is laying...

Source record: 27934

I tried this with a 100 MB Seagate drive,
I got it to work once, but after repartioning my SCSI drive
it wouldn't work together any longer.
Any IDE device alone was running (my internal 2.5" 80 MB Seagate
and the 100MB one). Maybe some jumper installation one the
internal drive could do it.
Normaly IDE has three device states: single, master and slave.
I don't know if 2.5" have this two, but if so the internal
one would be on single mode and should be set to master.
But I could't find information on this and I have also not
the time to do so.

The internal Falcon IDE cable is a standard 2.5" cable.
You just need a cable with a 2.5" connector on one side and
a 3.5" connector on the other with a 2mm cable.
Than you just plug on another 2.5" connector for your
internal drive. The only thing I had to do on my cable is
to get the power supply to the internal drive again.
But this should'n be a problem.
If you have problems getting such a cable (I didn't want to make
it myself) I could tell you the adress were I got mine here in
Germany but I'm not shure if they sell to foreign countries.

Alex

I hope tyhat you can understand English, because I have a few problems
with German:

You can buy a hardware board called "PC-Speed" which will change your
Atari into a 286-based PC.

I hope that helps.

Ozzy.

Hallo alle !

Ich suche einen PC-Emulator fuer einen Atari-ST oder STE.
Ich brauch das aber auf einer Disc, da ich diesen Rechner nicht selbst besitze,
ist nur fuer einen guten freund, uns fehlt eben das nullmodemkabel,
ausserdem weiss ich nicht, ob ich auf einem SGI-Rechner das Ataridiscformat
emulieren kann.

oder eine Programm womit ich 720kByte-PC-dos formatierte Disketten
auf dem Atari ST oder STE lesen kann.

entweder mail zu mir oder hier rein oder gleich in mein PSF schicken
ich bedanke mich jetzt schon mal dafuer.

Its a configuration problem with the networking software. Either on
your end or the senders. LF/CR should be converted to HR and vice versa...
same thing happens when looking at IBM text on the Atari... (almost)

The news sender should strip and or convert the EOL characters or the
news reader should do it.

However, it also might be the display device you are using...
if you are using trn on unix LESS and MORE display information differently
if those are the pagers you are using.

I'm having some trouble transfering with my modem when I do a file transfer using zmodem. I am running on an ST with mega roms and a US Robotics sportster 14.4 fax modem. I have tried using it with both the turbocts and serfx20x RTS/CTS patches installed. I have the serial rate fixed to 19.2 (&B1), the TD flow control set to hardware flow control - clear to send CTS (&H1), software flow control off (&I0), compression om auto (&K1), and the receive data (RD) hardware control - request to send (RTS) set to 'Received data to computer only on RTS'.

Now whenever I'm downloading a file about every 15,000 bytes I get a bad check and it has to send the offset and restart from that point. The first time it does it is always at 14433 bytes. Anyone have any suggestions??? This is driving me nuts. It does this about 40 times when Im downloading a nice sized file! What the hell?

My good old 1040STF uses TOS 1.4 an an Apple SCSI Miniscribe. In this configuration the SM124 Monitor breaks down as soon as I boot from the HD. TOS 1.0 doesn't. May be someone knows how to handle this problem?

I heard rumors of a capacitor missing in the keyboard???

Thank you
Klaus

>with the first 4 characters as: ATM5?

I think it is Atomik 3.5 - a very good packer - if you are going to depack it the use New Depack or Mega depack - I think they will work - or you can use the unpacker built in to Atomik (which you can get from most archives).

ERZ>
ERZ>

Dazu brauchst du kein Programm, denn das geht sowieso, das Atari und das DOS Format ist eigentlich identisch, nur es durfte nicht identisch sein aus igendwelchen rechtlichen Gruenden.

Also hat Atari an die Stelle, an der DOS die Version des Betriebssystems ablegt, einfach quatsch gesetzt, da diese Frage am Atari ignoriert wird.

In Klartext, auf DOS formatierte Disks lassen sich auf den Atari weiterverarbeiten,
auf Atari formatierte aber nicht auf der DOS Kiste.

Urspruenglich hatten wir uns mal ein kleines Assembler Prg geschrieben, um Atari disks auch noch nachtraeglich umzusetzen, spaeter, jedenfalls glaube ich, wenn wir mit FCopy 3.0 formatiert haben, war das bereits 100%iges DOSformat.

385. Seeking PAK3 infos ?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-02 19:08:13 UTC
From: jmb@cao-vlsi.ibp.fr
Message-ID: <3grait$69l@vishnu.jussieu.fr>
Source record: 27855

Hi,

I'm looking for informations on the PAK68/3 card. I own a Mega ST, and
this card seems to be the perfect solution for me.
All I know is :
* 68030 (?? MHz)
* fast ram expansion slot (?? Mo)
* faster than a TT (Qindex? Gembench?)
* suitable for a mega ST box
* needs 68000 unsoldering (OUCH!)

But what about :
? TOS versions (language)
? options (cost)
? FPU slot
? 68k/8Mhz emulation mode
? compatibility (Which program do you use with it)
? Linux development

Have anyone here more information ?

Thanks.

386. Re: killing mr speaker

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-02 19:17:46 UTC
From: ac382@freenet2.carleton.ca
Message-ID: <D3E09M.z3@freenet.carleton.ca>
Source record: 27856

The speaker on the Falcon is plugged into a little 2 pin soket. Once you open up the Falcon you can very easily disconnect it or connect an on/off switch or a POT for a volume control. I unplugged mine for now but I think I'll make another little audio plug on the back of my Falcon so I can plug in the speaker on the outside (with a volume control). Very often I only want to hear some keyclicks or a bell or play a sample to hear what is sounds like. Right now I have to power up my stereo to do that, which is a bit of an overkill.

Message-ID: <3grceu$69l@vishnu.jussieu.fr>
Source record: 27857

Hi,

I intend to make a switch to connect boths my colour and mono monitors
to my ST. I have given a look at several FTP servers with no success.

I know the pin description of the video output, and that's all.
Must all the 13 pins be switched ?
Isn't there some special treatment for the mono detect pin ?

My monitors are the basic ones (SM124 and SC1224), no multisync.

Thanks for any help, and sorry for my English.

>
>Alan.

Well a number of things, you could have the drive plug the wrong way around, no drives are the same regarding this connector...

Thier could be a fault with the drive, disk in switch not working..

Notes: I would never run a HD disk drive in a long lead, all Atari drive leads are far to long for HD use..

If this is the eLCo module that piggy backs over the WD 1772, you could have problems as most WD 1772 02 02 will not work at 16mhz...

The other problem is the step rate, it will end up being to fast, you would need to load a fix from the HD befor you could use the Floppy...

The only Real way to get HD drives to work it to use a Ajax Controler chip..

This is all food for thought....

Um, how about WinX?

With the switches L2 and G8 you can get ridd off the horizontal scrolling bar
completely and get a smaller slider-background, too.

One needs GEMRAM to install these patches in RAM or, even better, put it into
Eproms.

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
which the programs were intended, or in UNIX ....

- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

- -

Agreed.

398. Can I do this?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-03 20:26:38 UTC
From: vsnyder@math.jpl.nasa.gov
Message-ID: <3gu3hu$bti@netline-fddi.jpl.nasa.gov>
Source record: 27867

My hard disk won't autoboot.

I have Berkeley BMS-100 -> Emulex MD21 (SCSI->ESDI) -> CDC 81 MB ESDI disk.

I partitioned and formatted the disk with Supra utilities. I've put Supra auto-boot software on the disk. Supra utilities insist the autoboot is enabled.

So I turn on the disk, wait for it to come up to speed and the controller to quit negotiating with the disk (all the lights quit flashing), then turn on the ST. The disk light flashes twice, then the A: drive starts working. If I ignore the A: activity, after about 90 seconds I have A:, B: and trash icons on my screen. If I subsequently manufacture an icon for C:, it doesn't work. If I put a diskette with Supra software in its AUTO folder, and appropriate DESKTOP.INF in its root, in A:, the system comes up right away with working icons for the HD.

If it would help anybody diagnose what's happening, here's output from the Unix utility "diskinfo -v" for the Emulex MD21 + CDC ESDI setup:

```
SCSI describe of /dev/rdsk/md21.1:
vendor: EMULEX
product id: MD21/S2 ESDI
type: direct access
size: 79447 Kbytes
bytes per sector: 512
rev level: A00
blocks per disk: 158895
ISO version: 0
ECMA version: 0
ANSI version: 0
removable media: no
response format: 1
```

When I had Berkeley BMS-100 (same board) -> Adaptec ACB-4000a -> Seagate ST-4038 it all worked, and autobooted (but I ran out of space, and got a good deal on the Emulex + CDC -- $25 + $0).

I'd rather not have to use the HD boot floppy.

I have an antique Magic Sac with a burned-out ROM in it (it fell out of the port, and my 6 year old son pushed it back in -- the computer was on at the time).

Can I somehow put the Supra software on ROM chips, and put the chips in the cartridge? I have uv-e-proms lying about, and access to a prom programmer. I just don't know the format for programs in the cartridge. I'm not sure that knowing the format is enough: I might not be able to transform the

Supra software into a form suitable for loading into prom.

If it's possible, or if you've already done it, please send me a file to
send to the prom programmer, or tell me where to ftp it from, or instructions
how to change the Supra .PRG in my AUTO folder so it works from the cartridge.

] >with the first 4 characters as: ATM5?
]
] I think it is Atomik 3.5 - a very good packer - if you are going to depack
] the use New Depack or Mega depack - I think they will work - or you can use
] the unpacker built in to Atomik (which you can get from most archives).

Atomik hasn't been terribly reliable in my experience, half the programs
I pack with it cease to operate, whereas Ice-pack v2.4 and PFX-Pack v2.1
both work fine. Ice-Pack is quite quick, and gets good compression,
PFX-Pack is very quick and still gets good compression, although not
quite as good as Ice. (Ice must do more passes or something)

My brother has a Summit SE-120 tape drive, originally intended for use in a PC. It connects to the Floppy Drives cable.

Can he use it with his ST? If so, where does one get software for it?

E-mail replies if possible. It's for my brother, who has no news feed, and I don't read this column very often.

Bist Du Dir da sicher? Ich hatte bisher noch keine Probleme,, Atari-
formatierte Disks mit dem PC einzulesen, weder unter Dos noch unter Linux.
Die Disketten hab ich ganz normal vom Atari-Desktop aus formatiert.

From: jyoung57@delphi.com
Message-ID: <Ro6Z7wV.jyoung57@delphi.com>
Source record: 27876

Hi,

I need a few assembler pointers for accessing a resource file.

I created a sample resource file consisting of a menu bar object and
a dialog box object using the RCS.PRG.

I then used the RSRC_LOAD() call returning a zero which I believe indicates
a successful load.

I then try to obtain the menu bar object tree addres with RSRC_GADDR()
using values of 0 object type (To find an object tree) and an index
of 1 to find the first occurrance which would be the menu bar object.

However, upon calling, the routine returns a non-zero indicating the
object does not exist.

Can anyone suggest any help? Do I have to reserve memory for the resource
file prior to shrinking memory at run-time or does GEM do this? Anyway,
thanks for any help...

i picked up ram in simms for my 520st to bring it up to 1m.
the board sayes 1040 on it and there is place for 16 chips and
16 resistors.
i took the chips off the simm cxards along with the resistors and put
them on the mother board . the chips had 2 different numbers 1 of them match
the others don't(between the orignal chips and the simm chips).

at first i got only bombs and realized there were 3 330 ohm resistors missing
so i put them in and everything works the way it used to but the new bank
of ram is not recognized what gives?

There is an odd version of MMU in some older atari computers. I don't
know at the moment how to check, but as this chip (the odd one) can't
deal with more than 512kb, you might have to put in a new one.

If you really did solder in 16 resistors, then that's your problem. If they were actually 16 capacitors, then you did the right thing -- they're there to smooth out the ripples in the 5V line caused by the operation of the chips.

Otherwise, what were the numbers on the original 520's chips, and what were the numbers on the chips from the SIMM board? This should help in finding out if you soldered in the right chips.

I thought the binary was the compiled version! Have you looked at the
binary? It should contain pgp.ttp, that requires no compiling. Also, I
don't know which version ftp.tu-clausthal.de has, but
atari.archive.umich.edu has PGP 2.6.2. It's in Utilities/PGP I believe.

Hi Bertil.

I doubt you can just upgrade with a few chips, as this adscsi+ is much
different from your adscsi. One thing missing is the clock.
I have the address for ICD somewhere here, but can't find it just now.
(I'll send it to you netmail when i find it, ok?).

I also doubt you'll be able to get an adscsi+ at all, as they stopped
producing them long time ago, (very stupid if you ask me, cause thats
the best thing that did ever happen to the atari world).

Alternatives, hmm! Difficult if you ask me. Try seek an adscsi+ second hand,
as it's really worth waiting for. I got an exstra here, but unfortunatly
i probably need it myself.

422. Mega ST 2 decides that it doesn't like mono.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-05 09:54:12 UTC
From: sak@nauvax.ucc.nau.edu
Message-ID: <5FEB95.09541292@nauvax.ucc.nau.edu>
Source record: 27890

I have a mega ST 2 and a sm124 monitor. One day the monitor just stopped working. i had a color monitor, and soon after this incidence i got another one. The ST liked both of these monitors. i am wondering what would make it stop sending a mono signal. It makes a loud humming noise when a Mono monitor is hooked up. i took it out today and hooked it up to a functioning mono sm124 and it did the same thing that it did with mine. i am sure that it is the computer.
Related... When i thought that this problem was indicative of the monitor,i took out the fuses from the SM124, i moved after that and i have misplaced them. Now that i know that it works, i want to replace these fuses, BUT i don't know what size they are. Couls someone please help?
Model: SM124
Power: AC 117v 60Hz 0.4A
SN#: n1141080279
M Date April 1991 (newer then i thought)
Chasis no.: mt-9

One more thing, possibly related. I was receiving a lot of bombs after the Monomonitor went out. I associated these with disk errors, now i am wondering if it could have something to do with the same "problem" that is causein the Mono failure. I am worring that my St is on it's last legs, please help.

Yes you can connect 2 IDE drives to your falcon. I haven't done it, but I think you need a cable with 3 connectors (1 in one end and 2 in the other end). You also need SCSI TOOLS from Hard & Soft (the HUSHI driver with SCSI TOOLs can handle 2 internal IDE drives).

427. Q about 1772 chip/1.44MB disk drive

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-05 21:57:48 UTC
From: hallvart@oslonett.no
Message-ID: <3h3hks$sfp@hasle.oslonett.no>
Source record: 27796

I'm thinking about installing a 1.44MB "HD" disk drive inside my Atari STE as well as a hard disk. I need to know a couple of things first.

- I have gathered a lot of info on how to install a HD disk drive from the net
and know that I need to have a drive controller chip that can handle 16MHz.
I have heard that I need the 1772-02-02 for this. Now, I don't know if it's the one I have in my STE. It looks like this:

```
____________________
| | ________ _____________________
| C398739-001A | | X'tal | | V L S I |
) ATARI 1990 | -------- ) 9029BV 110282 |
| -31 I60511-01 | | 4070ACPIA |
| | | VL1772-02PC |
|____________________| |_____________________|
(DMA chip) (floppy drive controller)
```

I'm also wondering about the drive itself. I now have a SONY MPF 110-03 720K drive, and it would be nice to get a HD drive with the same physical dimensions regarding screw holes and eject button etc. Is there another drive from SONY with the same physical dimensions etc. but with HD capacity?

In one of the text files about the modification, it was mentioned that by making a jumper at "E6" (to the left side of the "hi" ROM chip, where you have several open jumper positions marked "E0" to "E7") you gain access to HD formatting on the desktop.
I tried this and it worked- instead of just having the "single-" and "double-" sided format options you also got "high density"!

All you do is solder the two sides of the "E6" together.
Does anyone know anything about the other jumper positions? What are they for and what features will they give access to by conecting them together?

My other question is about installing an internal IDE (2.5") hard disk drive inside my machine. Has anyone done this on the STE before?
I know it's possible to do for the STF and STFM, but when I checked some time ago I got the impression that it wasn't possible on the STE.

I know I need a controller card- is there anything else. How much will the whole thing cost? Can I use the DMA connector on my STE for another hard disk later, or does the IDE drive use this chip?
Thanks for any help.
Please reply directly to my email address as I only have a slow modem, so I rarely scan the newsgroups. thanks!

Hallvard, Oslo, Norway (hallvart@oslonett.no)

428. contact problems-power supply?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-05 21:59:30 UTC
From: hallvart@oslonett.no
Message-ID: <3h3ho2$sir@hasle.oslonett.no>
Source record: 27797

I've got a problem with my STE, and for a long time I thought it was a virus, but now I'm sure it isn't because I've asked around and checked with a virus killer as well as using different disks that I'm sure aren't infected.

Basically the machine is working perfectly, but all of a sudden everything might just "freeze", or the mouse might work and I can access the drop-down menues, but I can't access them at all or type. And on a few occasions the machine freezes as well as bombs appearing on the screen.

I suspect this to be a contact problem, especially since I changed over to TOS 2.06 and had to de-solder the old chips (there were no sockets) which was a mess. I damaged several traces, but managed to fix them again (I think).
The machine's been working perfectly for months when this suddenly happened. I've opened my machine and tried to jerk the ROMs to see if the problem comes back then, but it doesn't.

Now, I'm wondering if the problem can lie in the power supply. Can a problem like this come from it? I had a problem with it a year ago, but found out that it had a contact problem. And it disappeared after re-soldering all the components on it. Any ideas?

Also, now that I'm on the subject of power supplies. I read here that someone had found out that the European power supplies could be run on US 110V by removing or adding a jumper. Is this correct? If so, where is the jumper, and what does it say on the PCB besides it?

Thanks.

Please reply email: hallvart@oslonett.no

Es gibt keine PD-Software zur PC-Emulation. Solltest Du doch was
finden, lass die SGI eine DOS-Diskette schreiben. Ataris
lesen sowas einfach so.

What exactly do you mean by "the monitor breaks down" - the screen
goes blank? The computer resets?

The Atari reads and writes DOS disks by default, so the PC should not
be any problem. For your Amiga, you'll need a DOS filesystem driver.

Well for one think get hold of that Pointer and Trash that very old
Unlzh1.72, it looks like you have been away from the Atari scene
for some time...

The only one to use is LHA3101, and it has a nice GEM shell...

Note: HSMODA05 has a new SETTER program, GEM one at that, but don't
do what I did a rename the SETTER_E.RSC file, its the SETTER_E.STR
that has to be renamed for English use......

Use SETTER to up the RS232 Buffers....

This gives you a nice Window with Hypertext options/paramerters to set,
very very nice..

Also this later HSMODA05 lets you go faster with a Standard 8 MHZ ST,
like 57600 BPS when using the RSVE Hardware Mod....

Ich hab mir sagen lassen, dass (wenn Du unter Dos arbeitest) es von der Dos-Version abhaengt, ob Du ST-Disks laden kannst. Bei alten Dos-Versionen wird immer die uebliche Kennung auf dem Boot-Sektor (ich weiss leider nicht mehr, welche Zeichenfolge das war ... MSDOS ?) verlangt. Neuere Versionen koennen soviel ich weiss sogar Disketten einlesen, die mehr als 80 Spuren enthalten... (also nicht mehr dem ueblichen Dos-Format entsprechen).

Falls ich mich taeusche, dann korrigiert mich bitte.

You can also try icdinc@genie.geis.com

But I give you a small chance, they only react to your
mail if you want to buy somthing.

I have also tried ask to the following questions to icd here but they
don't seem to anwser maybe somebody else can help.
My icd host adapter _quit_ for the second time now and
I think it's the same again. one of the gal's died, so I
asked icd for the checksums so I can find out if there o.k
or not and maybe prgram a gal myself, This is probabely the
only solution for me , as there are no more atari dealer's
here in Holland who can repair the pcb for me (there hardly
are any atari dealers left anyhow). and the best idea they
have is buy a LINK .....wow is'nt tht a good idea. ;-((

So is there anybody out there that can HELP !

Cheers Richard

Ludo says: there is a way using Winx and Gemram. It puts TOS (parts of it) in
RAM which makes it possible to patch it. You can patch the vertical slider.
I couldn't manage to do the same with the horizontal one, but must work
also i guess. Gadgets reduce to half size..

Hope to be of help,
Ludo,

Or NOdesk 3.01 (desktop replacement): using it's own AES library changes
window gadgets to TOS 1.x width.
Also Cubase Audio makes window gadgets smaller, but I don't know if it
helps many people (runs also in truecolour!) :-)

Who is the first programmer there to make a patch to TOS 4.x for
getting smaller sliders??? Anyone? Please!

439. help with X11R5 installation!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-06 12:36:25 UTC
From: tkk@uclink2.berkeley.edu
Message-ID: <3h5549$mgj@agate.berkeley.edu>
Source record: 27806
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Okay, so I've got the latest version of Mint(v1.12) with latest version of MintNet(v70) installed. Now I'm stuck trying to install X11R5. Just like the installation README says, I've created a 'neu' directory -- I call it X11, and I've unzooed X11R5.zoo into this directory creating /etc /usr /home etc subdirectories in the process. Then I create a whole new mint.cnf file in the mint folder with entries from the README file. Then, the instructions says to reboot the computer, and I should get a "xterm" and "xclock".

When I did this the first time, I got a couple of file not found errors, and Mint is exited.

Noticing that the lines exec X11\bin\kbd and
exec X11\pty\pty were a little weird, I change these
to exec X11\usr\local\bin\kbd, and
exec X11\usr\local\bin\pty since that's where I found kbd, and pty.

So I again reboot the computer, and now it says:

xinit: file not found (error 33): no server "X" in PATH
Use the --option, or make sure that /usr/bin/X11 is in your pathand that
"X" is a program or a link to the right type of server for your display.
possible servers include:

xinit:server error

Help!! What are the right entries to have in my mint.cnf file? And how should the files in X11R5.zoo be placed in my directory?

441. MiNT/MiNTnet/X11 help!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-06 13:26:04 UTC
From: josk@stud.unit.no
Message-ID: <3h581c$ou2@due.unit.no>
Source record: 27807

I'm going to install MiNT/MiNTnet and X11R5, but there are quite a few
things that I haven't got a clue about!

1. If I use the multiuser ext. (init I think) is it possible too log on to my
falcon from a Mega STE running MiNT/MiNTnet? I plan to use the LAN-ports. I
want to access the modem and HD on my falcon from the MSTE.

2. How big should the minixFS-partition on my falcon be? I have a 100Meg
partition available. Can I run MiNT/MiNTnet from a TOS-partition on the MSTE
if I want to network it with my falcon?

3. I want to upgrade to a 'proper' Unix-system later. Will Linux/X11R6 work
well on a 32MHz Falcon with fastram and a large SCSI-drive, or should I
buy a Pentium? (Which is the cheapest option.)

4. Have anybody tried to run X over a 14k4 modem? Can I run apps. like
XRN and NSCA Mosaic if I install MiNT/MiNTnet/X11R5?

Jostein Dahl Gjelsvik (hhijg@alfred.uib.no) wrote:
: Help! I am looking for a utility that reads Atari files and writes them
: to an Amiga/PC. Please help me!!

If you format a disc on a PC, your Atari can read and write to that disc.
The files written by your Atari on the PC-formatted disc can be read by
a PC.

Does this help?

443. Falcon hardware

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-06 14:47:50 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Feb6.144750.45@genrad.co.uk>
Source record: 27813

Has anyone got any information about the hardware setup of the Falcon around the DSP and CODEC chips? What I require is the address that the CODEC is at, and its register structure. I can't even find out what IC the CODEC is. If I knew that then I could get a datasheet. I suppose a circuit diagram of the Falcon is completely out of the question! Atari have been as (predictably) forthcoming as the Maxwell brothers! Has anyone got a copy of the Developer's Documentation for the Falcon?

I have a copy of the Atari Compendium, and the Modern Guide to ... but these cover it at a fairly high level, ie. operating system calls. I realise the importance of keeping at operating system level for compatability requirements, but with the Falcon what am I meant to keep compatable with? With no prospects whatsoever of a Falcon040, Falcon060, or FalconPPC there doesn't seem to be any good reason to stay compatable.

Any help would be gratefully received.

446. Additional Midi on serial port?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-06 17:57:44 UTC
From: jmax@panix.com
Message-ID: <3h5nuo$r2t@panix.com>
Source record: 27812

I've seen a posting and a diagram about additional Midi being available for Cubase through the St's serial port by using a simple db9 to midi cable. I've also seen a posting warning against this. That the connection needs to be isolated in some fashion.

Does anyone have any information regarding this?

Thanks in advance,

jmax@panix.com

447. Re: MiNT/MiNTnet/X11 help!

Newsgroup: comp.sys.atari.st.tech

> falcon from a Mega STE running MiNT/MiNTnet? I plan to use the LAN-ports. I
> want to access the modem and HD on my falcon from the MSTE.

Yes, it`s possible. By setting up a SLIP-link with MiNTNet between your
Falcon and MSTE you will be able to run NFS (NetworkFileSystem) which
will allow you to mount the Falcon`s filesystem on your MSTE. It will
work just like a normal filesystem but limited by the transfer-rate
between the computers (therefore I recommend using PLIP rather than a
serial connection). To use the modem as if it was connected directly
to your MSTE is AFAIK more difficult. Someone else will have to fill
you in on the details here since I`ve never tried that.

BTW, I`ve also got a Falcon and a MSTE hooked up in a network. Works great!

> 2. How big should the minixFS-partition on my falcon be? I have a 100Meg
> partition available.

That will probably be enough to get a real nice system going. The basic
system won`t take more than 5-10 megs, but once you start you will feel
a need to add more and more all the time (like the full GNU emacs which
eats huge amounts of diskspace :-).

> Can I run MiNT/MiNTnet from a TOS-partition on the MSTE
> if I want to network it with my falcon?

It`s possible, but not easy. You will run into problems with files that
doesn`t fit the 8+3 limitation. Better install a small (~5MB) MinixFS-
partition and install MiNT/MiNTOS/MiNTNet on it.

> 3. I want to upgrade to a 'proper' Unix-system later. Will Linux/X11R6 work
> well on a 32MHz Falcon with fastram and a large SCSI-drive, or should I
> buy a Pentium? (Which is the cheapest option.)

It will definately work on such a setup. However, if it`s pure number-
crunching-power you`re after I`d recommend getting a Pentium.

> 4. Have anybody tried to run X over a 14k4 modem? Can I run apps. like
> XRN and NSCA Mosaic if I install MiNT/MiNTnet/X11R5?

This will probably work if you have more than 4MB in your Falcon. However,
I`ve heard that running X over a 14k4-link is a sure way of going insane
since it`s sooo slooooo (haven`t tried it myself though).

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

I have gotten MintX to work well, I have got MinTNET installed, now I am trying to get a PPP connection going. The pppd docs say syslogd is needed to run it - so I got MinTOS 1.4.1 and proceded to just try and get syslogd (and some updated file utils) I do not want to set up with users like a BSD system. The problem is there is no binary in the distribution for syslogd, only source and I do not have gcc up and ready to go to compile. Is there any binary of syslogd floating aroiund the net? I've kept the syslogd.conf file from MintOS but I don't want to install all of MintOS

Thanks,
Sam

>
>
> Jack Deth

Hmmm.. sounds familiar. I went through the same process some months ago
and finally found that TAZ was my answer. TAZ is a very fast comms prog
that has its own built in z-modem (& others) routines, so do not rely on
XYZ.TTP (which I found to cause a lot of problems), it also has it's own
serial port code and not only does it not need any serial port patch, for
any ST, it significantly increases my throughput in comparison to any
other prog I've tried. I regularly get a * Minimum * of 1050cps (average)
downloading zipped files at 9600 baud. Last night I even reached 1115
cps (average) getting PGP from Hensa.

I don't think TAZ is on Hensa, but it is on a.a.umich and if all else
fails, I can uuencode it to you (the self extracting archive is 94k long).

Get TAZ and bin all the serial port fixes.

Bye for now,

Kev.

452. Cat Box

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-07 00:50:00 UTC
From: ardoino@musical.fdn.org
Message-ID: <D3LuBD.ALL@musical.fdn.org>
Source record: 27818

Tom Harker
ICD, Inc

I'm and old user of Atari machines (STF, STE and now TT 030). I use a Syquest Trinology with ICD driver.
And now, I have a Jaguar too.

I write in french magazine ST MAG, about utilities like Papyrus, Phoenix, Le R&#65533;dacteur (with syntax corrector)... I also write a monthly news about sharewares (german, american, french and others).

And I write about peripherics for Atari machines : how to use SCSI, cheaper hard disks, CD Rom, additional memory...

Now I'll write a new about Jaguar news.

So if you can send me two Cat Boxes for Jaguar I can test them with Marc Abramson, who also writes in STMAG about programmation and about Jaguar products.
Why two Cat Boxes ? Because if only one is necessary to use and test audio and video, two are necessary to test Catnet and communication. And we think that it will be a good thing to test the Cat Box now, and not to wait for its official distribution in France.

If you can give us the Cat Boxes for free (as gift) for testing, we'll be very glad. But perhaps it's not possible, and then we would be OK to buy them (perhaps could we obtain a special price ?).

And then we'll soon write about the Cat Box in the magazine.

STMAG is one of the two Atari's magazines in France. Atari in France has lost the activity it had a few years ago, but the recent Atari Show organized in december by Composcan France and the coming of the Medusa 040 & the Eagle 040 show that Atari's activity sure is not dead and is starting again.
The Jaguar really helps for that and is well sold now in France since 'Alien vs Predator' and the announce of 100 new games in the first quarter of 95.

So if you can help us (STMAG) to give all the information which can help the Atari products, I think it'll be a good thing.

Now I thank you for reading me, and wait for your answer.

I give you my address: Jean-Jacques Ardoino
35 rue Sedaine
75011 Paris
Phone: (33) 1 48 06 61 41
Fax: (33) 1 48 05 50 04

More info please!

I'm on the verge of building a DE600 adaptor - but an NE2000 sounds like a
better bet.

Will it require a genuine NE2000 or just a clone. Genuine ones aren't $50
- or at least not here :-(

Is anybody going to do Linux drivers for this combination?

Thanks

:-)

Roland.

Ah, there`s your problem. The program you`re using does not support
the new -lh5- format introduced in LHarc 2. I suggest you get a file
called LHARC310.TOS (or something like that). It includes a nice GEM-
shell and can handle all different formats.

459. DSP Exec Programming

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-07 11:07:45 UTC
From: A Parker <se2ap@dmu.ac.uk>
Message-ID: <3h7ka1$d5j@macondo.dmu.ac.uk>
Source record: 27825

Hi,

I've recently hacked the OS code to do a DSPExecProg, I more or less understand what the code does except this:

```
move.b #$e,$ffff8800.w

move.b $ffff8800.w,d0

and.b #$ef,d0

move.b d0,$ffff8800.w

or.b #$10,d0

move.b d0,$ffff8800.w
```

--> Send bootstrap to DSP

From looking at my hardware notes this amounts to turning one of the RS232 lines off then on again. Does anyone know for certain what this has to do with the DSP? I would guess that it's some kind of DSP reset signal to allow a bootstrap to be loaded, but I'm not sure....

Can anyone help?

Thanks....

Alan. (Se2ap@dmu.ac.uk)

I've found this, with the demo version. Set a nice high rez with blowup
then boot up. Set the desktop to 16 cols, 40 columns and Double line on.
The desktop then returns with a smaller font and smaller gadgets.

Unfortunatly this is a fudge and some programs react strangly to it.

Alan.

Everyone seems to get this problem. xinit searches your PATH for the
executable file X (which is the X server) if this isn't in your PATH,
xinit won't work. One way to fix this is to do the following:

In MiNT.cnf :

INIT=login

In passwd, set your shell to be init (the really simple shell that originally
came with MiNT - 'coz it uses little memory).

Put an INIT.RC file in your home directory which sets up your path properly
so that X is found, then runs xinit.

Viola - X Windows.

Craig.

You would have to re-compile xrn for your local machine as no-one has ported it.
Mosaic won't compile as we don't have an Atari Motif (yet?). You can run them
remotely & display on the atari no problem (I've tried it).

465. Bug in Newdesk

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-07 15:08:18 UTC
From: josk@stud.unit.no
Message-ID: <3h82d2$t0l@due.unit.no>
Source record: 27833

I've just discovered a really annoying bug in Newdesk on my Falcon. When I try to copy or move files to the floppy I get 2 bombs! This only happens when I try to write to HD-disk, there are no problem writing to DD.

Note that this does not happen when writing to HD-disks from within a program, only from the desktop, so I guess that the problem is Newdesk and not the hardware, disks or BIOS.

Are there any patches to fix this? It's not a really big problem 'coz I'll install Gemini soon, but a patch would be nice anyway. BTW I have TOS 4.04.

I originally posted this in comp.sys.atari.st - if you've read this already - sorry, hopefully this is a niggle that others have experienced as well?!
Bonjour!
I have an Atari SLM804 laser printer, hooked up (of course!) through my DMA port. Now, the problem I am having is that when I go to print from something like NeoDesk or Edith Pro I can't! simple, eh?! Is there anything out there in terms of programs, fixes, etc that would allow me to redirect output from the parallel to DMA? This problem happens whether or not SpeedoGDOS is loaded, which surprises me as I would have thought GDOS would have redirected output itself. But I guess prg like EdithPro and NeoDesk ignore GDOS. Any help would be appreciated.
thanks/merci

Another common source is unZooing with a Zoo which screws around
with filenames so case isn't preserved. The X exec must be a
capital X and not a lowercase one. It is a good idea to print
out an archive listing and compare your directories to make
certain all case/lengths of filenames has been preserved!

There's no such bug in my TOS 4.04, so either you must have some
ACC or AUTO doing harm there, or your ROM's might be damaged.

Try removing the NEWDESK.INF file totally, boot the machine clean
(without ACC's or AUTO's) and see if it works after that.

As for me, I get 2 bombs only when I copy/move DIRECTORIES to
a PC-formatted HD floppy (but there's no problem with disks
formatted from the desktop).

474. KA9Q Questions...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-08 00:12:27 UTC
From: kerkhoff@mail.utexas.edu
Message-ID: <3h929b$8de@geraldo.cc.utexas.edu>
Source record: 27741

After reading the newsgroup for a while, I may be a little behind the times but I'll ask anyway. I'm interested in getting KA9Q (or some other software) functioning so I can connect with the 'net. I have a slip account with the University and I think I'm close to getting the NOS functioning. I have a couple of questions, though.

I downloaded the STNET110.TOS software and have done quite a bit of configuration on it. The dialer works, and I am (apparently) saying the right things to the system at UT to get a slip connection going. The BOOTP command doesn't appear to working in NOS, however. Here's an listing of what I'm doing:

```
#startup file for KA9Q-NOS (version .41)

log \nos\spool\nos.log

hostname s10

attach asy AUX: 0 slip s10 32767 1500 19200
dial s10 dial.txt

ifconfig s10 netmask 0xffff0000 broadcast 255.255.255.255
route add default s10
route add 255.255.255.255 s10

#here's the one that doesn't work---
#returns the error message "command not recognized"
bootp s10 noisy

ip ttl 64

#etc......
```

I suspect that I'm missing something obvious in the setup but the docs are truly daunting! Also, if I type the commands in manually line-by-line, I can watch them complete. When I set them up in the startup.nos file, the "dial" command is skipped and a number of errors are generated since "s10" hasn't been defined. "Dial.txt" contains my account and password as-well-as the lines:

```
terminal download
slip default
```

To which the UT machine responds with "Your IP address is..."

Has anyone configured NOS this way before? Any help would certainly be appreciated!

Message-ID: <h54118.792213143@sakura>
Source record: 27742

Dear everybody,

I got a Falcon Wings board recently. The stupid paper that
accompanies it doesn't tell me what SIMs I can use... (In fact it only
says: `Unfortuunately not all SIM modules can be used...'!)

OK, all I have is:
- must be real FAST-PAGE_MODE
- no 16Mbit chips
- <=80ns
- 8 or 9 bits wide
- that's all

From the connectors I count 30 pins, so I need 30 pin SIMs...

Also one can either plug in one 4MB SIM or 4 4MB SIMs I conjecture.
What about 2 8MB SIMs (or one for that matter)?

What else do I have to know before I go shopping??

Many thanks in advance,

Christian

I get bombs too, copying stuff from floppy to HD. These are
pre-formatted floppies, I never checked whether it still happens with
my own floppies. It doesn't happen under MultiTOS, so there is a
solution. It's a bit dodgy, though.

Not sure if TOS 4.92 solves this problem. Checking it out RSN. :-)

> Does anyone have any information regarding this?

According to the MIDI standard, a MIDI input port should should use an opto-isolator.
I believe the main reason for this is to avoid gound loops which cause the dreaded
50Hz hum with audio gear. Of couse it also offers a degree of protection to
your computer's electronics (there are non-MIDI uses of 5-pin DIN plugs which have
larger currents/voltages). However opto-isolation is somewhat rare for other digital
connections (e.g. null modem).

BTW does anyone know how to get the ST's serial port to run at MIDI speed?
Also how does one do interrupt driven i/o from the Falcon's serial port (SCC chip)?
Has anyone got one of these "MIDI-Modem" type add-on ports to run on a Falcon?

Steven

Just try it, there is quite a good chance that it will work without
any modification. You might want to cool the VLSI chip somehow. If
after a while you get read/write errors, get the Ajax replacement chip.

481. msg for carlos vauela re cv translator

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-08 13:09:10 UTC
From: waynlein@hk.super.net
Message-ID: <3hafpm$l4l@hk.super.net>
Source record: 27748

In your .doc for the cvtranslator you suggested that anyone with questions/comments abouot your translator program contact you through this bulletin board. I hope you are still reading it; I only downloaded the program the other day, hoping to get some help with all the German .doc files for many of the games at Atari FTP sites.

Well, while I can appreciate that you don't want to give away anything for nothing, you have so limited the test program in its ability to handle text - by making the dictionary so small - that it is impossible to evaluate it. You say that downloaders may "evaluate it for 21 days" without paying a registration fee. It only takes a few minutes to find out that what we've downloaded will translate maybe 5% of the words in any given document. What do we do - retranslate the same thing for 21 days and pronounce ourselves satisfied? Or pay you the $20 you ask for what we know not?

Sorry. You've got to do better than this. Better you should put in some kind of byte limiter - say, 2K of text, then the program freezes - but with full dictionary access, so we can see what it is really capable of. Otherwise, this is a pig in a poke. (Translate THAT into German.)

482. MagicMac Demo ?

Errm, do you mean the source is at Clausthal? If the binary were there, your problems were _almost_ solved.

However, it is not legal to re-import certain versions of PGP back into the united states.

The US-versions use a RSA-licensed library, which is not to be exported. The international version does not use RSA directly, and can be used legally outside the US. But the import of this non-RSA-version into the US is restricted.

>to use one, I'm hoping someone has already done it. I would be grateful,
>to be able to download it.

There are several Atari-version around, I'm using it for sometime now. Perhaps you can find an appropriate version somwehere at *atari.archive.umich.edu*.

Source record: 27755
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

[Note: Followups are directed to comp.sys.atari.st only]

In article <791779302snz@bassland.demon.co.uk>,
Simon Williams <simon@bassland.demon.co.uk> wrote:
>? "Wouldn't it be nice if at least one person actually sat down and wrote a
>complete guide, to setting up MiNT/Minix/Lynx, etc" - I know I'm not the
>only person who needs to know.

I accept your challenge! Below is my outline of a possible "How to
Install MiNT" document.

I would appreciate comments. Particularly, I have experience of
setting up MiNT on only one system -- my own. Please mail me about
your system, giving details of what hardware and software you have, any
problems you encountered and how you solved them (if you have solved
them!) I will try to look for patterns, and add the details to the
FAQ.

I will fill in as much as I know or have experience of in the next few
days, and add anything of relevance that I receive in e-mail or read on
Usenet. I can't, however, guarantee that I'll see items posted here;
if you want it in this document mail it to me directly. My e-mail
address is in the header of this posting.

I will try to keep the names of authors attached to the information
they've submitted, but if this becomes impractical, I'll just put all
the names in one big lump at the end.

I expect to have a useful amount of information in this document in
about a week's time, and will post it again then, and whenever there is
a substantial amount of new information. I welcome suggestions as to
how often it should be posted when it has reached a stable state.

I have tried to include the questions that are often asked here, and
topics that are likely to be asked. However, if there is a topic that
you feel should or shouldn't be covered in this document, let me know
about that, too.

Thank you all for your help!

Source record: 27752
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have been trying to set the baud rate of my PPP connection
using pppd on a TT/serial2/HSMOD05 to 57600. Mint runs
after the HSMOD stuff and pppd sazs 57600 not supported.
If I try 134 (remapped value for 57600) i get a 19200
connection. 38400 is accepted as a baud rate

I tried running HSMOD stuff after Mint (and in various combos)
but pppd complains 'tcgetattr: invalid function number' This
tells me Mint must have some routines that are overwritten
bz HSMOD05 that are necessary. Does anzone know how to get
Mint to accept 57600?

It makes me wonder how musch HSMOD actually does if run before Mint.
I tried running DRVIN before mint and SCC after. SCC complained
the RSVF cookie was not found. Does Mint screw up the cookie jar?

Thanks,
Sam

>with a clone card for about 60-70 Deutschmarks :-)

Okay - its just that according to the PC Linux stuff I've read - not all NE2000 clones are quite 100% - and therefore not all of them will work.

> >Is anybody going to do Linux drivers for this combination?

>Should be should be... But we are awfully waiting for the linux support
>for PAK3/Medusa before we could adapt an existing PC-NE2000-Driver (which
>should not be to difficult)

Fine - though any particular reason you are waiting for the PAK3/Medusa support?

Another few questions:

Will this adaptor require soldering - or will it fit into the cartridge/parallel port like th DE600 adaptor does?

Are these adaptors going to be for sale as a (semi)commercial product? If not will a pre-etched/drilled PCB be sold? Whats the price likely to be - and when will it be released?

Finally is it likely to be TT compatible? I'd like to use it to connect up my PC running Linux/PC. On the TT end I'd like to be able to use either MiNT-Net or Linux/68K.

Sorry for all the questions - but I have an oportunity to build the DE600 adaptor now (I can get hold of a DE600), though the NE2000 card seems a much better bet if it will be here soon and easy enough to fit.

Thanks

:-)

Roland.

497. MiNTnet incredibly slow?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-09 08:09:36 UTC
From: jaszcz@sleepy.EEAP.CWRU.Edu
Message-ID: <3hcik0$t0g@usenet.INS.CWRU.Edu>
Source record: 27763

I installed MiNTnet on my machine. It has several problems, so I'm wondering if anyone experienced these problems. I'm running everything on a Mega ST with 4 megs, mint 1.12, and mintnet .70.

First problem: there seems to be no implementation of the nameserver protocols. when I try to connect to host by name (ex: telnet yukon or even telnet yukon.scl.cwru.edu), it sits and waits forever. I've put the IP address of the nameserver in the appropriate file. I've also put the gateway's IP address.

Second problem: if I specify the IP address of the host, it connects, but the transmission goes incredibly slow, especially if I type anything--the characters get echoed back about two seconds after they're typed. Finally it quits sending or receiving anything after about a minute or two.

I thought it was the serial driver that was messing up. so I went and got the german hsmodem drivers. They didn't work too well on my machine. However turbocts works fine (I've tested it with a terminal program). So I don't imagine that's the problem.

Also, I'm a little confused by what is meant by the remote host IP. I'm connecting to a terminal server. Should I use its IP? does it matter? anyone know how to get it? (it's a standard terminal server... I tried the show command, but I don't see anything resembling its ip)

Lastly, let me just confess that I have a Mac that uses the same modem with "InterSLIP", and it works fine.

I have used Supras since day one, and I have never had any
problems with my Supra 14.4 with any terminal programs. STraight
Fax, from what I am told was written originally for the
SupraFaxModems. Is the Supra 14.4 that you saw have a little display
in a box on the right side of the faceplate? If not, than those are
the 144LC models, and would naturally be less expensive than the 144
models which have a display that tells you the attributes of the
connection.

E-MAIL: ccapc@cyber.sell.com

Our LAW FIRM offers direct guaranteed effective credit restoration services by experienced attorneys. THIS IS NOT A DO-IT-YOURSELF KIT.

What can we do?

We have successfully facilitated the removal of Late Payments, Charge-offs, Foreclosures, Repossessions, Collection Accounts, Loan Defaults, Tax Liens, Judgments and Bankruptcies from our clients' credit reports. WE GUARANTEE THAT YOUR CREDIT CAN BE RESTORED!!!

Who needs our services?

Anyone who has experienced the inconvenience and embarrassment of being turned down for a credit card, a lease or a purchase of an automobile.

Anyone who is unable to buy the house of their dreams due to denial of a mortgage application or who has to pay thousands of dollars more in mortgage interest than someone with good credit.

Anyone who has been turned down for a job or promotion due to derogatory credit items on a credit report.

Anyone in business who has lost a deal because a person or firm wanted to see his/her credit report before doing business.

Anyone who has been unable to establish credit.

THE FOUR GREAT MYTHS OF CREDIT:

Myth #1: It is illegal or immoral to have your credit report cleared.

Fact: It is not illegal nor immoral. In fact, that is what the Fair Credit Reporting Act is all about. The act was enacted by Congress in 1971. One of its purposes as to give consumers the protection of the law and to help guard against

any unwarranted invasion of a consumer's right to privacy.

Myth #2: The information on a credit report cannot be changed.

Fact: Actually, the opposite is true under the Fair Credit Reporting Act. Federal and State laws require that items be removed if they are not 100% accurate or cannot be verified in a timely manner.

Myth #3: It is impossible to get a bankruptcy off a credit report.

Fact: Bankruptcies can come off credit reports like any other derogatory item. The nature of the derogatory item has nothing to do with its removal under the Fair Credit Reporting Act.

Myth #4: Credit Reporting Agencies are empowered with some kind of governmental authority.

Fact: Absolutely Not!! They are simply large corporations whose primary goal is to make a profit like any other business.

If you have ever applied for or received credit, a file exists in one or more of the credit bureaus. These companies collect, store and distribute as much credit information as they can find, retaining negative information on a credit report for 7 to 10 years. This information is evaluated by potential creditors to determine your credit worthiness.

Credit reporting agencies are in business to protect the interests of the creditors. the LAW FIRM's goal is to help and protect the individual consumer from inaccurate credit reporting.

The president of our LAW FIRM has been practicing consumer law since 1984. The staff of our firm has successfully processed, disputed and challenged thousands of client credit reports.

Our legal fee is based o the number of negative items that appear on a client's credit reports, issued b the three national credit bureaus. Our retainer agreement offers a MONEY BACK GUARANTEE stating that if any negative item is not deleted, upgraded or corrected from a client's credit file, it will give the client a full refund for that item or continue to process the client's file at no additional fee until that item is

corrected, upgraded or deleted. THE ONLY THING YOU HAVE TO LOSE IS YOUR BAD CREDIT!!

PLEASE CONTACT THE LAW FIRM AND LEAVE YOUR FULL NAME, MAILING ADDRESS AND TELEPHONE NUMBER SO WE MAY FORWARD FURTHER INFORMATION AND INSTRUCTIONS TO YOU ABOUT OUR SERVICE.

I have done something very much like this, over a 19,200bps RS232
line. I can get programs to run on the Unix host and display their
windows on my 4Mb STe, but it *is* quite slow. (I'm running term and a
monochrome emulator, though, so it's not really surprising!) Mosaic,
for example, works perfectly well, but it takes a minute or so to start
up.

Actually, if I want to run X sensibly, I have to connect at 9600bps, so
that I don't get too many term protocol errors, which I guess are due
to serial overruns. I want a faster processor!

I just bought a Falcon to use for Harddisk recording. I've been looking everywhere on the net for a FAQ that describes the audio in/out hardware modifications to get better sound quality, bu I can't find it. So, could anyone give me a tip where it is, or maybe mail me a description of the modifications?

Thanx/HUGO.

But No|Desk is an application does not replace _all_ window gadgets by
changing internal AES-functions! It only uses this for its _own_ windows.
Windows of other applications will still use the standard AES-gadgets.

Ciao ...

I forgot, there is also a simpler solution to file sharing than using NFS.
The program Medium-net comes with an accessory for sharing hard drives
over a midi link. It also has a mint XFS version as well, so you can share
printers & harddrives between MiNT & non-MiNT machines (great for
folks who've bought a falcon but still have an old 520 kicking about
& want to get some use out of it). I like this approac, and would love
to see a TSR / Accessory version of MinixFS as well (but don't expect to).

Medium net is on a.a.u.e, but not in the MiNT directory - perhaps
it should be linked to the MiNT filesystems directory as it's does
include a loadable filesystem.....

>formatted from the desktop).

This bug has been known for several months. It's a GEMDOS bug which only
get visible on disks with one sector per cluster, e. g. PC formatted HD
disks. The Falcon desktop uses 2 sectors per cluster when formatting a disk
and in this case the bug doesn't show.

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi All,

Is anyone using the TT Ram board along with the PAK board on their ST? If so is it worth getting? I have heard that it costs at least 100 UKPounds without any simms, which seems to me quite expensive :)

Yes - I know the PAK board itself is not cheap, but at least you get more than a few simm sockets for your money!!

Am I missing something here, (No flames please!!!) or is it simply paying for 4 simm sockets?

If anyone could enlighten me I would be very grateful.

Beric "puzzled" Dunn..

: Just try it, there is quite a good chance that it will work without
: any modification. You might want to cool the VLSI chip somehow. If
: after a while you get read/write errors, get the Ajax replacement chip.

I have fitted this mod inside my computer with virtually NO success.

First, I fitted it to a computer with an 02PC chip (like yours) and I
managed to backup the hard drive onto high densities, but after that, hd
disks could no longer be read from or written to!

Someone (who ought to know) told me that the 02PC chip was just a third
party 00-02; ie. it would not work.

So I tried fitting the upgrade into my other ST - This one has a proper
Western Digital WD1772 02-02 - so I thought it would work first time.
But no. I have had no success at all with this time.

BTW: All I have is a switch on the side of the computer to switch either 8
or 16 MHz into the Floppy controller chip. This should then be as simple
as flicking to 16MHz mode when I want to use a HD disk
But NO LUCK!

So for now, I am back to double densities!

On the subject, I also fitted the OVERscan mod, exactly as detailed in the
file, but this too is a big failure - although it does do something, it
does not do what it should!

Hallo Martijn !

MD > intel is replacing all sold pentiums that have the FPU bug.

In the UK, Intel will only replace faulty Pentiums if users can prove
that they have need of the faulty instruction. The procedures for
claiming a replacement have been made deliberately complex to deter
people.

MD > I guess pentium is safe now (as safe as a complex thing as
> a processor can be)

Perhaps as save as a *CISC* processor can be, the bug has again
highlighted the problems inherent in CISC design. IBM aren't
building Pentium machines, when they're convinced, then perhaps I'll
take another look (but probably not :o)

MD > And a pentium running linux is certainly a combination I am
> interested in.

Have you looked at the Power Macintosh ? They offer more power for the
same (or less) money and have much higher build quality than any PC.

- andy.

Hey all!

I just bought a used Sang MegaVision 300, and I like it fine, with one exception: I have to turn on my computer several seconds before I turn on my hard drive (an ICD AdSCSI+). Otherwise, the drivers cannot find the board. I'm using a Mega STE 4 with no internal hard drive. TOS 2.06. Anyone else out there using a similar combination? Will turning on the hard drive while the computer is running its RAM check damage my system?

Wishing I could read the German manual,
Mike

517. Falcon SCSI-problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-10 05:16:26 UTC
From: root@icon.pp.se
Message-ID: <H.ekBL.MLIuf6piZK6@icon.pp.se>
Source record: 27784

I`ve heard that some Falcons have SCSI-problems due to some "bugs" on the motherboard. AFAIK it is timing-problems and it can be cured simply by adding a few components.

What I would like to know is:

1. Does all motherboards have the same problem, or has it been fixed in later revisions?

2. If it has been fixed, what revisions are bug-free?

3. If it hasn`t been fixed, where can I obtain info on how to fix it myself?

4. Is the SCSI-interface in the Falcon capable of handling drives that generates _and_ checks parity? (see below)

The reason I ask is that I believe my current motherboard is one of those who doesn`t work correctly. Sometimes the computer just hangs for about 10 or 15 seconds. During this time the LEDs on my harddisks are lit and absolutely nothing else happens. When 10 or 15 seconds have passed the leds are turned off. A couple of seconds later it sounds like my harddisks goes through some kind of reset and then everything continues as if nothing had happened. Unfortunately, when the harddisks goes through the reset my DAT-streamer starts rewinding the tape. If the computer hangs like this while backing up it never returns to normal. Instead it turns off all LEDs except for the busy-LED on the DAT and sits like that until I press the reset-button.

Has anyone experienced anything like this? It`s rather frustrating to have a computer that temporarily locks up every now and then and not being able to make full use of the nice DAT. The thing I absolutely can`t understand is that these lockups ONLY appears when I`m running MiNT. When I`m running plain old TOS everything works great. Any explanation?

My setup:
F030/14, TOS 4.04 but a Rev A motherboard, no FPU.
420MB IDE (Conner)
1.04GB FastSCSI2 ID#0 (Micropolis) <- no termination, parity enabled
540MB FastSCSI2 ID#1 (Quantum) <- no termination, parity enabled
CD-ROM SCSI2 ID#4 (Sony) <- no termination, parity enabled
DAT SCSI2 ID#6 (Wangtek) <- terminated, parity enabled
SCSI-tools v6.04, MH-MiNT v1.12h2 (plus additional patches),
MFS v0.60PL11 and Erling Henanger`s SCSI-drivers v5.

I`ve also tried with active termination on the Micropolis unit but I couldn`t notice any difference. Also, when I turn off parity checking on my Micropolis unit it doesn`t get recognised by the computer. I`ve tried this with a "clean" system (only the IDE-unit and the terminated Micropolis), but whatever I do I can`t get the computer to recognise the Micropolis unless parity-checking is enabled. I though the Falcon _couldn`t_ handle drives that checked parity. Right or wrong?

Well thier is only one, its GSZRZxx, version 2.28 is on many FTP sites, their are later Demo versions, its now upto version 5.4 from a post that I have recieved, I still only have version 4.7..

Its the only one that I know of that support the ARGV standard, all other versions are far to old...

Its not freeware but costs 40DM, well that was what I payed for my last copy, and it is supported via a few German BBS's, updates etc...

Hi,

I've recently hacked the OS code to do a DSPExecProg, I more or less
understand what the code does except this:

```
move.b #$e,$ffff8800.w

move.b $ffff8800.w,d0

and.b #$ef,d0

move.b d0,$ffff8800.w

or.b #$10,d0

move.b d0,$ffff8800.w
```

--> Send bootstrap to DSP

From looking at my hardware notes this amounts to turning one of the
RS232 lines off then on again. Does anyone know for certain what this
has to do with the DSP? I would guess that it's some kind of DSP reset
signal to allow a bootstrap to be loaded, but I'm not sure....
Can anyone help?
Thanks....

Alan. (Se2ap@dmu.ac.uk)

I get the same problem under TOS4.02. I hadn't noticed it was to do with PC formatted floppies, but now you mention it - yes, that was it.

Craig.

I think you must have it set up wrong, 'coz the nameserver stuff works
fine for me. entry in resolv.conf

```
# My nameserver
nameserver 1.2.3.4
```

>Second problem: if I specify the IP address of the host,
>it connects, but the transmission goes incredibly slow, especially if I type
>anything--the characters get echoed back about two seconds after they're typed.
>Finally it quits sending or receiving anything after about a minute or two.

Are you using DIP to setup the serial port correctly? If not, then you should.
I use CSLIP over a 2400baud link & although a little slow, it's not nearly
as bad as that, and it's slowness is just down to my cranky old modem.

>I thought it was the serial driver that was messing up. so I went and got
>the german hsmodem drivers. They didn't work too well on my machine. However
>turbocts works fine (I've tested it with a terminal program). So I don't
>imagine that's the problem.

I'm fairly sure that MiNTnet doesn't work without the HSMODEM drivers, so you
should really have another got at installing them. You may find that older
comms programs don't work with HSMODEM installed (eg. STORM doesn't like
HSMODEM, so I only install it as part of my MINT-NET bootup).

>Also, I'm a little confused by what is meant by the remote host IP.
>I'm connecting to a terminal server. Should I use its IP? does it matter?
>anyone know how to get it? (it's a standard terminal server... I tried the
>show command, but I don't see anything resembling its ip)

You have to set the remote machine into SLIP or PPP mode, just a terminal is
no good at all....

EG. When I get the dialup annex prompt, I enter 'slip', then my username,
then my password. Then I wait for the remote machine to tell me my IP
address then bring up the SLIP connection at my end.

This is all done via a DIP script, so it's automated
In fact on my setup, DIP is attatched to a TWM menu option under MiNT-X,
so I don't have to type anything, just select 'CONNECT' from the menu &

up comes my Internet link :)

>Lastly, let me just confess that I have a Mac that uses the same modem with
>"InterSLIP", and it works fine.

Ahh a Mac user. Sorry, we sacked the baby sitter on the Atari years ago :)

Craig.

Ask anyone who has Cubase Audio Falcon. The hardware modifications are
described in the manual. I'm too busy to write the info now, sorry....

BTW. Does anyone have the instructions to fix the "clock - bug" in
older Falcons (makes audio distorded and Cubase crashes) - just
in case a couple of friends of mine buys a second hand Falcon...

> I'm trying to find the format for Mad Max music, in the hope that I
> can create my own player. Can anyone email me the format, or know where
> I can download it from?

Mad Max music has its own player in it. The pure blip blop and not the
half-soundtrack is played like this:

First initiate and choose with tune to be played in the file by putting the
tunenumber to be played in register d0. These are 0-xx. then jump to the
beginning of the file. The file should have three BRA.S's in a row in the
beginning.
Then jump to fileaddr+8 every VBL.

assembler:

```
init:
moveq #0,d0 ; choose first tune
jsr music ; jump to initiation subroutine

vbl:
Wait_vbl

jsr music+8 ; play one vbl of sound

bra vbl
```

I'm not sure but I think that you'll have to be supervisor mode.
The half-soundtrack is a bit different and I don't know how to play that.

Good luck!

Tomas :)

536. NNTP compat news for MintNet?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-10 19:44:35 UTC

It's really fantastic !
I just finnished the Okami Newsreader setup in my computer and i can say that it is really the best Off Line reader for ST i have ever tried before !!!!
First of all, it works with Soup & UUCP mail package's which can be easily created using the famous UQWK proram for Unix, Linux e.t.c.
I suggest to use Soup format..its the best format for offline reading of Usenet Newsgroups and private mail. The configuration is easy and the documents included in the package (Engl. & German) are very good.
From now on, i can say that i will never have to read the newsgroups using rn, tin, pine or anything like this...ST is the best solution!
As i said before you will need : UQWK program for Unix (can be found on most ftp sites) and Okami Newsreder (version 026) found on Hensa, Umich and mirrors. Read the nice docs, setup okami and you are ready!

P.S. I Just want to say a great THANKS to OKAMI Writer :
Wolfram Roesler <wr@bara.oche.de>
This is a great job !

I keep reading this statement - but I'm not at all convinced that it is
actually 100% true.

My TT seems to run MiNT-Net fine without HSMODEM. Of course they is no good
reason not to have HSMODEM loaded - but it doesn't seem to be *neccessary*.

OTOH on my STM it does seem rather essential ;-)

:-)

Goldstar make an awful lot of monitors, including some of IBM's !

RJ > It doesn't have the 13 pin atari monitor plug, only a nine-pin

SA > I can't help with the pinouts, though...

It sounds like a Hercules/MDA monitor (ie 5151 compatible), a mono VGA
one would have 15 pin mini-D. 5151 types run at 18 KHz and you need
(I'm told) 35 KHz for the ST (VGA is 31 KHz).

That's what I did, but I couldn't find any as well. There are several newsreaders which do support NNTP in the original unix-versions, but none does with MintNet. So I compiled tin with NNTP-support. Seems to work fine by now, but I'll have to do some more testing before giving it away. Wait...

Supra's are FAR superior to USR's in every way. Especially their 28.8
models. Believe me, I know from experience. Besides, they've got that
nifty little digital display thingy :).

Most likely your are going to need an ASCI to SCSI host adapter. I recommend an ICD Link 2. Mac uses SCSI for just about everything. The ICD software will also support your drive.

Testdrive Speed of Light 3.x before you commit, it is still actively developed
and as the name suggests ///FAST... there is also a new package emerging that
looks very interesting, its called MGIF...

DMJ's looks a lot slicker, but is kinda slow...

Andy (hope that helps)

It's worth pointing out that Linux030 currently _requires_ a maths copro,
so you'll need to add this to your list. They're only about 25-30ukp, though.

ATB,

Martin

Yes. Up to now there was no single drive I tested with the Falcon or TT that
didn't work and I tested quite a lot.

That's not my experience. When I've contacted Tom Harker on Genie I got
very prompt answers to my questions even though I wasn't asking to buy
anything and he was unable to supply me with a solution himself.

Very helpful as I remember.

hmm... i believe that's what i have, minus the ip, of course

: Are you using DIP to setup the serial port correctly? If not, then you should.
: I use CSLIP over a 2400baud link & although a little slow, it's not nearly
: as bad as that, and it's slowness is just down to my cranky old modem.

hmm... 2400's don't have any hardware handshaking... maybe that's the
problem...

: I'm fairly sure that MiNTnet doesn't work without the HSMODEM drivers, so you
: should really have another got at installing them. You may find that older
: comms programs don't work with HSMODEM installed (eg. STORM doesn't like
: HSMODEM, so I only install it as part of my MINT-NET bootup).

i'll give it another go. it might be something to do with the setter
program. i thought i tried all the settings. also, it was losing characters
all over, if the buffers were small. with large buffers, it would just hang..

: You have to set the remote machine into SLIP or PPP mode, just a terminal is
: no good at all....

i'm afraid you misunderstood. i am connecting to a slip server (or
term server)... i get _my_ ip, etc, but... my point was that the slattach
demands the "remote" machine's ip. this is difficult to obtain, considering
i don't really know what the name of the terminal server is. plus, i've never
seen the remote ip mentioned in any other slip implementation.

: This is all done via a DIP script, so it's automated
: In fact on my setup, DIP is attatched to a TWM menu option under MiNT-X,
: so I don't have to type anything, just select 'CONNECT' from the menu &
: up comes my Internet link :)

i'm missing the dip script. i just did something like stty 19200 < /dev/aux
(or other) .

: >Lastly, let me just confess that I have a Mac that uses the same modem with
: >"InterSLIP", and it works fine.

: Ahh a Mac user. Sorry, we sacked the baby sitter on the Atari years ago :)

relax. i had an 8 bit and a 1040 for years, and now mega.
got the mac maybe a month ago.

I always thought that the MiNTNet docs recommended using it, and said where
to put it in the auto folder. What version of HSMODEM are you using, and
are they in the right place in the auto folder? (I can't remember offhand
whether they should be before or after MiNT)

If you log in with a plain terminal program (Storm or Connect), what do you get ? When I log in to an annex port here, I get the annex command line. Entering 'slip' here gets me a Username/Password prompt. Once thats done, I get a message saying 'Switching to SLIP, my IP 1.2.3.4 your IP 5.6.7.8' and my DIP script is set up to pull both IP addresses out of this.

> i'm missing the dip script. i just did something like stty 19200 < /dev/aux

????? Pardon? If anyone is having problems with dynamicly assigned IP address's, I could always post my DIP script for that (if thats the guy's problem).

You
Came to the right place. I have just Designed one for the atari St. I uses the printer port and can control up to 4 motors at once (single step) If you are interested in this project I is public domain (with optional registration) and you can get it from me directly if you wish. It has only been out for 2 weeks. It used very few parts (18 transistors, 40 restistors and 6 other components, Thats it!!!) It can be built for under 50 bucks in just a couple of nights. The package includes schematic drawings and pcb layout and etch pattern.
If you are interested drop me a line here.

> definitely need 30 pin SIMMs.

All four of the FalconWing slots require to be occupied, with
for example four 1MB 30-pin SIMMS or four 4MB 30-pim SIMMS
(I recall that there is a wire-link to select 4MB or 16MB configuration).
This is apparantly because the Falcon memory is 32 bits which is
made up from four banks of 8 bits each, so that every '8-bit bank'
needs to be occupied. On the FalconWing, my understanding is that
each of the four slots is effectively an 8-bit bank, so can be
either 4 off 1MB X 8bit to give 4MB in total, or 4 off 4MB X 8bit
to give 16MB in total.
One or two 8MB SIMMS would leave empty slots (i.e. empty banks)
and would therefore apparantly not work IMHO.

Fast-Page-Mode refers to the type of DRAMS used on the SIMM modules,
and is related to the manner in which Row and Column Addressing is
performed and subsequently memory access performance.
'No 16Mbit chips' may be a reference to FalconWing requiring to be
fully populated and that the Falcon cannot 'see' more than 16MB
(I believe that in actual fact the Falcon only 'offers' 14MB, but
I'm not sure what happens to the other 2MB - perhaps someone else
will clarify).
'8 or 9 bits wide' refers to the parity bit (i.e. bit 9) being
ignored by the Falcon, so that either 8 or 9 bit SIMMS can be used.

I used FalconWing with four 1MB SIMMS, and ignored the 'less than or equal to 80nS' recommendation as I had 100nS SIMMS readily available (from my ST) and they seemed to work OK, that is until I discovered intermittent problems, with varying degrees of severity and frequency, particularly when 'BlowUp Hard 2' was active.
I found this to be due to the 100nS SIMMS being too slow, and now use a single 72-pin SIMM adapter with a single 80nS 72-pin SIMM, with which I have had no problems whatsover. I am sure that if I had used 80nS SIMMS in FalconWing, I would have not encountered any problems, but can report that I had problems with 100nS SIMMS, so would advise going for at least 80nS.
I have read of a potential problem with using four 4MB SIMMS with FalconWing in that the SIMMS had to be 'screened' as interference was apparantly causing problems. As far as I understand it, using insulated screening was successfull in that particular instance.

The dealer from whom I bought my FalconWing claims to have a 'list' of 'SIMMS which will not work with FalconWing' but I have never seen this list or heard any more about it - perhaps your dealer has similar information. The leaflet that comes with FalconWing mentions that 'Seimens' do not work, but I have a 72-pin SIMM with 80nS Seimens chips which I use with my 72-pin adapter, and it has continued to perform flawlessly.
I'm wondering if perhaps such a list of the 'SIMMS which do not work' with FalconWing are perhaps those that contain DRAMS which do not meet the specified minimum requirements.

Best Regards,
Brian

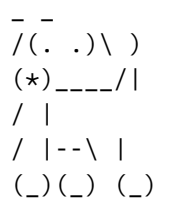
566. Cart port usage...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-12 20:40:48 UTC
From: richard@stingray.manawatu.gen.nz
Message-ID: <FBNJBIVAUp@stingray.manawatu.gen.nz>
Source record: 27734
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st



Does anyone know how people that use the cart. port, get around having no R/!W line? And also, for that matter, why is there no address 0 line connected? So you're limited to 1/2 the area?

Are there specific parts of memory which are best to use for cart addressing? I haven't taken much interest in absolute memory addresses (except for colour registers a couple of years ago), since my 8bit atari (which I am now using more often than my ST!)

Any info would be most appreciated.

Thanks,
Richard =8-]

I am looking for any info that anybody has on the Atari Stacy Notebook computer. Software, hardware, bugs, fixes, modifications, etc... Please e-mail to coates@cyberspace.com or twcoates@aol.com

Thanks

568. Re: Bug in Newdesk

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-13 00:43:54 UTC
From: josk@stud.unit.no
Message-ID: <3hma0a$l8@due.unit.no>
Source record: 27736

Thanks for all the advices on this! I've checked some of your advices, but haven't found a solution yet... However, there are some things that I can point out:

1. This bug occurs on both TOS-formatted as well as PC-formatted disks.
2. It only happens when I try to copy FOLDERS to a BLANK HD-disk from the desktop.
3. It does not occur when running MiNT, or when writing to the disk from within a program. (Like Gemini.)

IMO this suggests a bug in the Desktop itself, and not GEMDOS like someone stated earlier. The fact that the bug never occurs when running MiNT/MultiTOS (Which installes its own, multitasking desktop.) or alternative desktops like Gemini or Teradesk also suggest this.

There must be some clever hacjer out there who can fix this?

Can somebody help me with this?

I've just downloaded and installed Gemini 1.999e, now I want to
run it under MiNT. How can I do this? (Instead of starting it
from the desktop of course.)

I want to...

1. Start MiNT (I've got MiNT 1.12)
2. Initialize GEM, but not the desktop
3. Start Gemini.

Is this possible at all?

After having repartitioned my internal Conner 2.5" HD it acts a
bit weird. If it's not accessed in a minute or so, it shuts down.
When I try to access it, it powers up again, with an annoying
delay...

I know this is normal in laptops, but this is *really* annoying!
How can I turn this off? This has never happened before

571. Can't run MinixFS

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-13 01:01:03 UTC
From: josk@stud.unit.no
Message-ID: <3hmb0f$l8@due.unit.no>
Source record: 27641

I'm having problems running MinixFS on my Falcon. I cleared
my 100Meg F-partition and runned minit with the following parameters:

-V -n 2 -P F:

Then I copied minix.xfs to the root of drive c, and rebooted.
Everything looked allright, but when I runned mfsconf F: it said
'not a minix partition!'

I suspected the large sectors to be the problem, so I repartitioned my
harddisk (Which caused me a lot of trouble!) this time with a 32Meg GEM
partition, runned minit and the same happened again. I have AHDI
6.0-something and MinixFS 6.10. Any suggestions?

What fileselectors supports the long filenames? Must I run Gemini from
the MinixFS partition to be able to use the long filenames and the various
access-modes under MinixFS?

I would recommend SCSI-tools from Hard and Soft (Germany). It`s
commercial but well worth the price (99DM (~65USD)). It will let
you have one 330MB partition if that`s really what you want.

Unfortunately I don`t know if there`s any english version available.

>reason not to have HSMODEM loaded - but it doesn't seem to be *neccessary*.

>OTOH on my STM it does seem rather essential ;-)

MintNet does work *in pronciple* without hsmodem. The problem is that the
BIOS (ie the ones built into TOS) terminal drivers are a bit slow and buggy,
so you will get receiver overruns at high baud rates on slow machines.

Ie. 19200 on an 8MHz ST NEEDS hsmodem! On MSTE's or TT's you should use
hsmodem as well for ports != modem1. When I tried MintNet on a TT some
time ago, SLIP over modem2 and serial2 did not work at all without hsmodem!

579. IDE-drive nightmares.....

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-14 09:38:12 UTC
From: ndm_s@el.utwente.nl
Message-ID: <ndm_s.2.001C5852@el.utwente.nl>
Source record: 27648

Last night we have been debugging an IDE-hardisk (Conner, 42Mb) which is
connected with an IDE adapter from the CT-magazine to an Atari Mega ST 4 with
TOS 2.06.

But, I'm unable to format the drive or to make the bootable.
We (family) read articles in ST-magazin about the problems with connecting
an IDE drive to an Atari because the drive doesn't give the right parameters
to AHDI.

Finally after programming and testing for hours, we could copy the ROOT- and
BOOT-sector from an working Megafile 20 to the IDE-drive.
Use HDX and ZERO partition C, install the SHDRIVER.SYS with HINSTALL and boot
from the IDE-drive, but the drive has now the settings of the Megafile and
unfortunately that means only one partition of 10 MEG (instead of 40). I tried
to change the partition table in the ROOT-sector but with no succes.
Before I'm spending more nights on the computer, there might be somebody out
in space that could help me. It would be very, very nice.
I state my problems here:

Has somebody experience with the same project from CT-magazin?
Has somebody experience in connecting an IDE-drive to his/her Atari ST?
Where can I find the partition table of the Atari? This might be the
boot-sector instead of the root-sector, but it was to late to try it.
How is the information of the hard-drive written in the root/boot-sector?
So where can I find starting/ending clusters, number of clusters per
partitions and so on?
Why is it not possible to format or to partition the drive with HDX(5.0)?
I get errors like: wrong format, bad sector-list is corrupted.
With the Bios-routine Rwabs it is possible to read/write a sector on the
drive. However, it is not possible to distinguish between logical
and physical sectors. Why? Does a IDE-drive only support physical
sectors? And why is the number of the device used in Rwabs 18 for
an IDE-drive.

Well, if somebody has answers on my questions, maybe I could get my nightrest
back.

Greetings from Holland,

Wietze Nijdam.
Student electrical engineering
University of Twente.

p.s.: my e-mail number for direct mail is:
w.nijdam@el.utwente.nl

All information would be helpfull.

> port accessed within Cubase?

I believe Cubase accesses the extra channels through MROS drivers (not
too familiar with it - we have V.3 in the Studio here. I think you
select either <ATARI> or <EXT1> ... <EXT3> for output on each track.

I have successfully build a three/four channel Serial-To-MIDI board for
the ST, and it is essentially a buffer (MC14xx RS232 receiver - I'm not
sure about the number) on the ST's flow control and data lines. Pass
this into a demultiplexer chip (74LS138/9) using the flow control to
drive the address inputs, the data to strobe the enable. Outputs just
current limited with a MIDI-sized resistor on both OUTx and GND (220Ohms?
It's a while since I built it...). All the software has to do is tweek
the UART divider and baud rate for MIDI value (I think 32000 is as close
to 31250 as you can get) and then output bytes as normal. Different
outputs are selected by altering the flow control lines. Only one
channel can be used at once, and only MIDI OUT is implemented, but it's
good for connecting more than one "channel-hogging" device (i.e. general
MIDI etc that use all 16 channels).

I could look up more exact details if anyone is interested.

BTW, I have heard that Cubase has a similar device as a cheap MIDI Out
Expander but have not seen any evidence of it.

It should be in the /mint or /multitos directory of drive c, I don't know
whether it works from the root, I think it depends what version of MiNT you
have.

>I suspected the large sectors to be the problem, so I repartitioned my

No they're not. I don't think minixfs uses the large logical sectors but it
should work with them.

>What fileselectors supports the long filenames?

Boxkite and Mfsfm. I prefer Mfsfm because it forces everything to be from
drive u: so you can forget about drives altogether. You may not want
this unless you set up a unix-like directory structure though.

>Must I run Gemini from the MinixFS partition to be able to use the long
>filenames and the various access-modes under MinixFS?

I'm pretty sure you don't need to, although I haven't tried it.

They simply use the information on the address lines instead.
The address 0 line doesn't exists in the ST. This is the lsb of the
address bus. The lack of line 0 prevents you from accessing memory on
odd addresses.

> Are there specific parts of memory which are best to use for cart addressing?
> I haven't taken much interest in absolute memory addresses (except for
> colour registers a couple of years ago), since my 8bit atari (which I am now
> using more often than my ST!)

The cartridge port of the ST is located in the $FA0000-$FBFFFF memory area.
The first longword should be a set value from which the OS gets the type
of cartridge (Autoboot or Application (GEM-accessible))

>There isn't an address 0 line on the 68000 at all; it's a 16 bit processor. To

No there isn't an a0, but that is just the way they did it. I believe that
68030 does have a0.

>do single byte accesses there is a line to indicate that it is a byte access
>and another to specify which byte (effectively an A0 although it's not called

Not exactly true, what you actually get is two data strobes instead of one -
UDS (upper byte) & LDS (lower byte). On even reads, UDS & LDS go at the same
time, reading both bytes at once. On odd reads, only UDS is strobed (hense
the limitation to reading bytes only from odd addresses)).

>that) but I don't know whether they're on the cartridge port.

Yes they are

>As for the R/!W line, you can't get round this, there is no good way of
>writing to the port. If all you want to do is trigger something like a scan,

Can anyone post or send me some information on the
Atari 1040 ste......

I need general and technical info and any disk images

Thanks..
sblinman@neumann.une.enu.au

589. [Q] Is there a FAQ for MiNT Net ?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-15 08:18:39 UTC
From: acounis@lpnhp3.in2p3.fr

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,
I would like to know is someone has ever written a FAQ for MiNT Net.
I am currently using the KA0Q-NOS package but I would like to play with
MiNT; as there are numerous files on a.a.u.e, I don't know which one I need
to have a simple MiNT Net (no X11R5) running.

Yes - I am very interested !

I have Cubase v2.0 on my ST and would like to build an extra midi port.
My midi our is getting clogged with controller data [needed for those
bends..] and this would help a great deal.

Any further info you have, please mail me or post.

TIA

BTW, just *how* do I select ext1 for the midi out, the options I get are
ATARI or MROS - do I need a driver ?

Paul

A friend of mine just got a 520st and came to me about where he could get support for it. Well we live in PC land and I have to mail order everything for my amiga. So I was wondering where he could get support. I even thought getting my self a 1040st or aa falcon 030 to learn for fun. I know there are some die hard st owners like us die hard amiga owners that get ill at the sight of the pc world escalating.(How on earth can they stand windows) YUK. Though with windows 95 around the corner they will get a taste of what the AMIGAS ATARIS AND MACS have been doing for years. So if some one could let me know where to get support or even if there is a FAQ for atari somewhere. scooby@infi.net

592. Atari ST hack in progress....

m> UPCOMING EPISODES:
m> Questions about building a memory upgrade board using SIMMs.

One of the ultimate ironies of the Atari ST system is that
the computer is not upgradeable. I'm sure that many people from
other computer platforms would be very quick to agree. Many
others, such as Dave Small, and probably the people at ICD INC
would take some small exception to this idea. I too would have to
take a minor exception. Because of the relatively closed
architecture of the ST this computer system has become a hackers
heaven. It is with this in mind that I have written this recount
of my experiences using SIMMs to upgrade STs to 2 1/2 megs.

It seems like each time I read an article about upgrades
there is a long warning about warranties and technical competence.
Why should I care if you ruin your computer? As far as your
warranty goes, if you remove the screws on the bottom your warranty
is void. My upgrade will cause your warranty to explode and
possibly ruin your computer desk in the process. There is the
small reminder that since the warranty is only 90 days in the
first place, the odds of your warranty being valid at this time
are nill. One small consolation, if you do ruin your computer
while attempting this upgrade you can always buy an STe and use
the SIMMs there.

The reasons I developed this particular style of upgrade are
two fold. The first is that I just wanted to see if I could do
it. The second has to do with my personal feelings about sockets
that plug into existing chip sockets and cause permanent damage.

There are a couple of advantages to my upgrade techniques.
1} I use SIMMs, which are noted for their reliability. 2} The
upgrade requires only two minor jumper/foil cuts. 3} All
connections are soldered which means no sockets to ruin and if
properly done provides extremely reliable long term operation.
```

Since you are probably going to try this anyway, you should go ahead and get yourself a pair of 1 meg x 8 SIMMs. If you should happen to get the 1 meg x 9 SIMMs, that is ok too. The speed isn't that important, but it is hard to find a set of SIMMs these days slower than 100ns anyway. While you are in the getting mode, get yourself a few feet of 28 gauge Kevlar wire such is used for wire wrapping. You will also need a decent temperature controlled soldering iron running between 750 and 800 degrees. Take your 25 watt Radio Shack type iron and throw it away while you are at it. Those small and unregulated irons are a good source of just the right types of static known for killing CMOS circuitry dead. I should also mention the fact that the longer a soldering iron remains on the circuit board, the greater the chances are that you will begin destroying the foil patterns.

The major problem I have encountered while upgrading STs is the numerous version revisions. There are no fewer than 6 different styles of mother boards and many of them use different circuit symbols for the various components. For this reason I will not be referring to any of the components by their circuit symbols. All references will be by component name, such as the MMU, or the upper and lower RAM banks. I simply have to assume you know what your are doing.

I begin the upgrade by removing the mother board from the computer and placing in on an anti-static workbench. Depending on the model of computer, the upper bank of ram chips must be removed. By upper bank I mean the row of chips connected to the CAS1, and RAS1 lines from the MMU chip. You may verify this by measuring from pins 18, 21, and 22 of the MMU chip. CAS1 H = 22, CAS1 L = 21, and RAS1 = 18. The corresponding locations of the CAS and RAS lines on the ram chips are pins 15 for CAS and 4 for RAS.

The ST uses two rows and four columns of ram chips in their memory addressing scheme. The Row Address Strobes (RAS) are labeled RAS1 and RAS0, and the Column Address Strobes (CAS) are labeled CAS1 H, CAS1 L, CAS0 H, and CAS0 L where the H and L stand for High and Low. All the lines using the 1 are related to the the upper row and the lines labeled with the 0 are used in the lower row.

You will probably not find the above mentioned labels printed on your particular mother board. The only time I remember seeing this done was on the 520ST with modulator. Don't expect it.

If you are wanting to do this upgrade on the early 520 you should remove the entire set of ram chips. Your final upgrade will be 2 megs instead of 2.5. There is just no clean way to install all the wiring needed to installed chips.

Once the ram chips are removed it is time to mount the SIMMs and prepare the wiring. On the machines where the ram chips are

mounted under the keyboard, there is a good place to mount the SIMMs right above the upper bank of ram chips. I use strips of double sided adhesive foam which I attach to the back of one of the SIMMs. I then stick this SIMM to the mother board. When the SIMM is mounted it is about 3/4 inch above the spot where the ram chips were removed. I then take another strip of adhesive foam and cut it to a width of 1/4 inch. This strip is placed on the top rear of the SIMM I just mounted on the board. Now I carefully place the second SIMM directly over the first. It is important to line the two SIMMs up so that they match exactly. When completed I have the two SIMMs stuck together, with one on top of the other. From this time on, consider the top SIMM to be the "High" and the bottom SIMM to be the "Low" column.

For the STs with the ram under the keyboard, the upper bank of ram chips just happens to be the ones farthest away from the front of the machine. It also happens that the "High" column is o the left and the "Low" column is on the right. To make remembering easier I use a marker and mark the center between the two columns. That make eight on the left and eight on the right side of the mark.

If you have one of the STs with the ram under the powersupply, you will need to use the ohm meter and verify the locations of the upper and lower banks. While I have looked at one of these beasts I have not done an upgrade on this particular style so I cannot suggest a location for the SIMMs.

The following pinouts will be critical to your successful upgrade: 1 meg x 8 SIMM

```
0 0 0 0 0 0 0 0 0 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2 2 2 2 3
1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0
| | | | | | | | | | | | | | | | | | | | | | | | | | | |
V C D A A D A A V D A A D A A D A A N D W V D N D N R N N V
C A Q 0 1 Q 2 3 S Q 4 5 Q 6 7 Q 8 9 C Q E S Q C Q C A C C C
C S 0 1 S 2 3 4 5 S 6 7 S C
```

256K DRAM Pinout

```
1> A8 16> VSS
2> Din 15> CAS
3> WE 14> Dout
4> RAS 13> A6
5> A0 12> A3
6> A2 11> A4
7> A1 10> A5
8> VCC 9> A7
```

If you notice, there is no A9 on the ram chips. This is the new address line and special consideration is required. I will cover this further on.

I start by making a check list numbered from 1 to 30 with two columns, one for the upper and one for the lower columns.

PIN 1
Beginning with pin 1 on the SIMMs take the kevlar wire and strip back about half an inch. The neat thing about the wire is that it fits perfectly into the holes on the SIMMs. Since the Vcc line is common to both SIMMs I insert the wire into the lower SIMM and solder it into place. I then attach the wire to the upper SIMM and solder it. Because the Vcc line is what it is, I now use a slightly larger gauge wire and run it from pin 1 of the SIMM to pin 8 of the nearest vacant ram. In order to keep things neat, I keep the wires as short as possible without any undue stress.

Since I removed the 16 ram chips I have my choice of spots for the placement of the wires run from the SIMMs. The following considerations should be taken into account.

The address lines A0 through A8 are common to all the chips. The CAS lines are split so CAS1 H is common to the upper column of 8 chips and CAS1 L is common to the lower 8 chips. The RAS1 line is common to all 16 chips. The DQ lines are separate and require special wiring.

PIN 2
The CAS line on pin 2 of the SIMMs needs to be split up. The lower SIMM is wired to any convenient pin 15 of the lower column. The upper SIMM is wired to pin 15 in the upper ram column.

PIN 3
DQ0 is split. The lower SIMM is run to the first chip socket of the lower column. This should be the chip closest to the spot previously marked as the center. Both columns run from left to right. The DQ label corresponds to the Din or pin 2 of the ram socket. The upper SIMM is wired to the ram socket farthest to the left.

PIN 4
A0 should be wired from the lower SIMM to the upper SIMM. It should then be wired to the nearest ram socket pin 5. The only major concern here is neatness.

The rest of the wiring follows the same order listed above. Pin 21 of the SIMM should be jumpered between the two SIMMs and then run to ram pin 3. Pin 27 of the SIMMs is also jumpered between the two SIMMs and then run to ram pin 4.

PIN 18
The A9 line is the new address line which is required when 1 meg chips are used. This line should also be jumpered between the two SIMMs. Using the Kevlar wire I run to one of the holes where the ram chips were removed. What I like to do is drop the insulated wire through the hole and run it over near the MMU. The idea here is to run the wire from the SIMMs pin 18 through a 33

ohm resistor (which you need to come up with) to pin 64 of the MMU. I like to use a little shrink tubing over the resistor connections since this is an outboard hookup. Using a couple of convenient holes for wire routing simply makes for a neater job.

I follow my check list exactly and mark each connection as it is made. Since the key to a well done job is top quality craftsmanship, I am careful to do the best job I am capable of.

There is now a final set of steps which is required to make this upgrade work. Because the upper bank of chips was removed, it is important to do something about the routing of the Row and Column address strobes. The configuration of the computer as it now lies consists of an illegal ram configuration. By this I mean that you have a 512k lower bank and a 2 meg upper bank. This needs to be reversed.

Reversing the CAS and RAS lines is simple but can be tricky. If you don't get exactly right your computer won't boot at all. It won't hurt it, it just won't work. What I like to do is locate the resistors these line pass through. The technique is to identify which resistor is associated with CAS1 H. I then identify find the resistor for CAS0 H. Once this is done I will lift one end of each resistor. Using whatever technique i can that is clean, I cross wire the ends of the two resistors to their respective holes in the pc board. I then do the same for the CAS1 L and CAS0 L lines.

Finally I identify the RAS1 and RAS0 lines. These two lines can be found side by side with the CAS resistors. On the foil side of the circuit board I cut the foil between the pads for RAS1. I then do the same for RAS0. If you look at the spot where the resistors are mounted, it looks like there is a place for two more resistors to go. This is usually where the RAS lines are found. The final step is to run jumper wires in order to cross wire the RAS0 and RAS1 lines.

It is important to check your work with an ohm meter at this point. I use a Fluke 77 which has a diode checker position. This setting of the meter is safe for CMOS circuits boards and also makes a beeping sound whenever it senses a short. The following measurements should be taken and verified.

MMU Pin # SIMM pin # New Identity

6 <==========> upper 2 CAS0 H
7 <==========> lower 2 CAS0 L
8 <==========> both 27 RAS0

You should also verify the new CAS1 H, CAS1 L, and RAS1 lines. These lines go to the remaining ram chips which are now your new upper bank.

Ram Pin # MMU #

4 <==========> 18 RAS1
15 (right) <===> 21 CAS1 L
15 (left) <====> 22 CAS1 H

This completes the upgrade. If you want to go to 4 megs all you need to do is make a few minor changes. Remove all the ram chips and of course use 2 pairs of SIMMs. Wire one pair into the upper bank position and the second pair into the lower bank position. You do not need to do anything about swapping the CAS and RAS positions.

If you are doing the upgrade on an older 520 that does not use the 1040 mother board you can also ignore the part about the CAS and RAS swapping.

I would like to suggest that you get ahold of some type of memory tester program. There is one in the GEnie library written by Barry Orlando which will do the job nicely. Another program written by Willie Brown does a good job as well. It is also possible to use NeoDesk to look at but not test our memory. With Neo Desk simply click on the desktop info and read the screen. there is a line at the bottom of the screen which identifies free memory.

I will admit that once or twice my upgrades did not work at first and required some trouble shooting. If this is the case, you will need to double check your work. Each time I had trouble it was caused either by a faulty solder connection or by getting confused when I swapped the CAS and RAS lines. If you get these lines wrong, you will probably not hurt anything, but your computer will lock up during the boot cycle. The only way to really hurt things is by wiring your VSS and VCC lines to the wrong places.

There is one other place you may get some trouble.
If you are upgrading from 512k and the computer has never had a memory upgrade before, there is a possibility that the MMU chip could be bad. This can occur because the CAS1 and RAS1 lines have never been used or tested. I ran into this problem once. It also doesn't hurt to remove and clean the MMU and its socket. This can pay off on the older machines.

Just in case I have inspired you to go out and do this upgrade, let me advise you that it takes me about 6 hours to do this job. Using a good desoldering machine to remove the old ram chips takes about 1 hour. You could also use a fine pair of cutting pliers and clip out the chips. This would be much faster, but I like to save the chips for other projects. The fastest upgrade I did was on a 520STFM where the 1040 mother board was used. There were no ram chips to remove.

Now that it is all done, it is time to sit back and enjoy your work. 2.5 megs is a pretty nice upgrade. The cost was fairly reasonable, the SIMMs cost $90 to $110 a pair and 100 feet of Kevlar wire costs about $5 bucks. The only other cost is for the resistors and depending on the computer you will need from 1 to 4 of them. I recommend using 1/8 watt 33 ohms.

I hope that this information is of some value to those of you who have read it. You may use this document in your club news letters or magazines provided it is printed in its entirety. You may not remove my byline cause I need some claim to fame. Finally if you should choose to perform this upgrade and kill your computer, you can always buy an STe and sell your dead computer to me, really cheap. Heck, I can always use a few more spare parts.

Speed of Light unfortunately does not come close to the picture quality of
DMJ GIF on an ST. It is orders of magnitudes faster, though, and can do a
lot more than load GIFs.

>and as the name suggests ///FAST... there is also a new package emerging that
>looks very interesting, its called MGIF...

MGIF has in fact been around since 1990, so it's hardly new.
Version 4.4 (still in beta, but very close to release now) is, however, the
first version to support colour and is so different from the old ones that
it might as well be a new program.

While MGIF will display GIFs in colour on an ST, it won't look very good.
For monochrome/greyscales or on a TT or Falcon, MGIF shines (IMNSHO).
(If anyone knows of a program that loads and displays GIFs faster in 256
colours on a TT or Falcon, I'd like to hear about it.)

The latest beta versions of MGIF are always available at my ftp site,
rand.thn.htu.se, if anyone is interested. The latest update was put there
four days ago and the next one is only a day or two away.

By the way, in contrast to the other programs mentioned, MGIF is FreeWare.

Actually this isn't quite right either. In the UK you have to go direct to
Intel, supply them with exact details of your motherboard and supply a
credit card number, this as a guarentee that you send back the old chip(s).

They then send you the new chips and pay for the dud ones to be posted back
too.

(This is my experience from having done this at work a couple of weeks ago)

Yup. That's right. Resets the DSP, which is then waiting for bootcode
on the host interface. The DSP reset is connected with the PSG bit #6
I believe.

Nat!

: AN ATARI ST HACK IN PROGRESS

That's the spirit!

```
: +----------+ +-------------+ +-------------+
: | 520 ST | 19 pins | Small board | 50 pin | Large board |
: | DMA chip |<------->| at back of |<-------->| over actual |
: | | | SH204 | ribbon | HD media |
: +----------+ +-------------+ +-------------+
: | |
: 2 smaller | |
: ribbons | |
: +-------------+
: | 20 Meg HD |
: +-------------+
```

: (1) What signals are on the 19 pin line?
: ASCI ? (What is ASCI and how is it different than SCSI?)

ACSI = Atari Computer Systems Interface

Which is like SCSI in principle, but not electronically,
which is why it requires item (3) [see below].

: (2) What is the 50 pin cable?

50 pin cable is a standard SCSI cable. There are other
types of SCSI cables, but 50 pin is very common.

: (3) What does that small board do, and what is it called?

It is called a `Host Adapter', and converts ACSI <=> SCSI.
The board in an SH204 is, I believe, a BMS-100, made by
Berkeley Microsystems. It was one of the first (if not THE first)
host adapters for the ST, and it's not very good. Very slow.
Any other host adapter for the ST would be better.

: (4) What is the large board over the drive? Does it convert
: SCSI to MFM or what? What is the board called? It has
: an extra ribbon cable header. Is this used to hook up
: another drive as I have heard is possible with the
: SH204?

Spot on! The board is almost certainly an Adaptec 4000,
which allows you to connect 1 or 2 ST412/ST506 to your SCSI
interface. If you want to connect a second drive, I can tell

you how to do it. The Adaptec 4000 is for MFM drives, the
Adaptec 4070 is for RLL drives.

: (5) How could I hook up an unused SCSI drive (from an old
: Mac) into this system? At what point does it get attached?

Remove the Adaptec 4000 and MFM drive, then connect the
SCSI drive to the 50 pin cable. Like I said, you'll get better
performance if you get a newer Host Adapter (unless the SCSI drive
you are connecting is a dog anyway).

: (6) I read in an article about MacMagic that this new Mac based
: ST emulator could read/write to Atari HD's hooked up to the
: Mac's SCSI port. Does this mean that the 19pin port on the
: back of the SH204 is true SCSI?

No, put the 50 pin connecter at the back of the
Host Adapter is, (or should be).

: (7) Will only MFM drives work attached to the large board?
: What drive mechanisms will work with the SH204 controller
: board? Where can I find the format parameters for use in
: Atari's format program datafile WINCAP?

Any ST412/ST506 type drive should work. You might have to
take a guess at the parameters. Otherwise get an ICD host adapter
and use their software. It contains parameters for a large number
of common drives. Either way, it shouldn't be too much of a problem.

: (8) What are the recommended means of speeding up HD I/O given
: that I am using TOS 1.0 in ROM. What PD programs are helpful.
: How much is TOS 1.4, and where can I find it?

Definately get `fatspeed.prg' for your auto folder (and make
it the first item in the folder). This will make an enormous
difference in TOS 1.0/1.2 . If you get TOS 1.2 you can take it out
again. Also, as I said before, get a newer Host Adapter.

601. Setting programs to use serial 2 instead of modem 1

This is the easy way, but with this method the desktop will be loaded and
running in the background, stealing memory and CPU-time. I want to *replace*
the desktop under MiNT.

|> have experience with running Blowup under Mint and MultiTos? I can't
|> remember if it worked with Mint 1.04 which is what I got with MultiTos.

For Mint 1.12, Blowboot has to be after Mint (1st trick...), and you have to
include the line 'exec c:\auto\blowboot.prg' in mint.cnf (2nd trick...).
This works fine with Mint and Multitos. If you want X running in 1024*768 you have
to write a tiny prgram, that just opens a (physical!) workstation. This program
should be started after blowboot in mint.cnf. So the screen (and line-a) is
switched to the new resolution before X reads these values.

|> In a related issue, does NVDI work properly with Mint and MultiTos and
|> Blowup030? I definitely want to get it (if I can find it available
|> somewhere, that is :-) but if it doesn't work with Mint it wouldn't be
|> nearly as useful. Screen output is bearable when I am not running
|> MultiTos but with MultiTos running it is just awful!

In this case NVDI has to be started before Mint ;-)

Try looking in ftp.uni-kl.de:
/pub3/atari/texts/platten.lzh - It's quite big but lists lots of makes of
hard drive, including Quantums. Details links, connector orientation and
cache settings etc. It's in German.

I think you have to run HSMODEM *after* Mint, ie ignore what the
HSMODEM docs say. The MintNet docs may be of some help to you.

It won't steal CPU time - it waits for Gemini to finish before doing
anything else. And I don't think it uses much memory as it is stored on
ROM (you are running from ROMs aren't you... ;-)
Under MultiTOS this isn't true - it will keep running and using memory so
install Gemini as the shell in the GEM.CNF file.

614. Atari Web Browser

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-16 22:25:20 UTC
From: jperez@uhunix.uhcc.Hawaii.Edu
Message-ID: <D446A8.AEK@news.hawaii.edu>
Source record: 27682

Is there anyone out there developing a Web browser for Atari computers?
I just spoke with George Geczy, the author of Hyperlink for Atari
computers. It is a Hypertext development system which supports Dbase
files, IMG, text fields, buttons, icons, etc... It is not specifically
for HTML, although, it is conceivable that it could be re-written or
patched to serve this purpose. Aside from the translation, it would also
have to be taught to telecommunicate.
In any case, much of the work has already been done, and the
Author is willing to sell the code (cheap) if there is another developer
interested in continuing his work, and/or adapting Hyperlink for HTML.
He can be reached at
george@jmg.on.ca

Unless you have a specific reason for one large partition (like sampling),
then you'd be well advised to break it down. Much less risk of losing it
all in one go - and (IIRC) you will get a smaller block size which will
maximise usage of the disk.

:-)

> >
>
> That IS strange.

My TT has a strange HD problem under MiNT. I have an internal Olivetti HD and an external DMA based drive (Seagate). If I try to copy *to* a MINIXFS partition on the external drive then the ICD Pro utilites start giving <Write XXXX> errors. There is no problem if the destination partition is TOS or if the source partition is MINIXFS.

All the drives chaeck out fine and for once my termination *is* correct ;-)

I'm one version behind on the MINIXFS, and several on the ICD Pro stuff so I'm not getting exited about this problem. Maybe it can be solved - but currently I can live with it.

> Wrong. Falcon- and TT-SCSI _can_ handle parity. The plain ST(E), Megas
> and so on, don't support parity via their ACSI-bus.

I thought the AdSCSI+ adaptor could handle parity - and surely The Link 2 can. Whether this parity gets passed back to the host machine is not important to the hard drive itself.

Roland.

Not familier with the Vofa Project. Not my idea of a fun installion though
- CPU socket. My STM doesn't even *have* a CPU socket ;-(

> R> Are these adaptors going to be for sale as a
>
> This will be anounced soon, as we make the last steps for this.

Thanks.

> At the moment we don't have a TT-Version, but we plan an adaptor. BTW
> has anybody just designed an VME to MegaBus-Adaptor?

A TT version would be nice (as I have a TT ;-), but a VME card could turn
out quite expensive :-(

Quite honestly I don't see why a 16 BIT ISA couldn't be built onto the
cartridge port. Okay so it wouldn't be very fast - but it would be simple.
The main problem with the DE600 adpator is lack of DE600s as opposed to
a bottleneck in the design.

> Just few weeks, Ethernet is working fine, but we still need to fix
> the ET4000W32...

Okay - keep us posted please.

I was under the impression that you had to run MINIXFS.XFS *before* trying
to use minit. I'm sure I tried what you did and minit just complained.

Recommend - yes. The point I was making was that MiNT-Net doesn't *require*
HSMODEM. Its just that you have to run at slow speeds or use a fast
machine.

> where to put it in the auto folder. What version of HSMODEM are you

HSMODEM4 at the moment. I had them loaded before MiNT - but my TT config
didn't like it much. I will try again with the latest version hopefully
this week. My STM config is quite happy with it though, and really does
need it.

:-)

Sounds like either your drive or drive PSU is on the way out.

Try a voltmeter on the power connectors to see if the PSU is up to it.
Alternative try a new PSU. This did wonders for my TT.

Failing that - its new drive time :-(

Roland.

All Quantum drives allow parity to be switched off but the newer ones
require special software for this. Such software is also available for Atari
computers, at least in Germany.
You have to connect the drive to a TT or Falcon to use this software because
if you have an ST with a host adapter that cannot handle parity this
software won't be able to do the trick on tht ST. BTW, if you had such a
host adapter you would not need to turn parity off.

Hello everyone!

Just a quickie for y'all to muse over....

Does anyone know what the "General Purpose Output" is from the monitor port on an ST? I ask this because I have an RGB monitor available to me which has RGB connections, that's no problem, but also needs composite sync. Would this General Purpose Output, by any chance, be this elusive composite sync??? If it isn't, I'm still interested in what it is. (Atari couldn't have really given a more vague description, now could they!)

I can get an I.C. from Maplins that will extract composite sync from the composite video output, but it costs about 5 quid, and 'cause I'm a tight git, I'm trying other ways first!

Cheers for any help!

ROB.

There is a composite synchro signal on the monitor connector (pin 2).
The GPO pin is connected on bit 6 of port A of the PSG (I think it could be
used as an input despite its name - General Purpose Output).

: Can anyone tell me how to increase the MIDI TOS buffer on the ST in the
: same way as Notator
: I am using GFA-BASIC which allows access to bios,xbios and gemsys
: parameters.

I don't know anything about GFA-BASIC but in C there's a function called iorec(). This function will return a pointer to a table which includes a pointer to the buffer, the size of the buffer, head and tail and low and high water marks (not used in midi).

Call iorec(MIDI) and save the current iorec-table.
Allocate a 64kB buffer (or smaller), put the pointer to the new buffer and the size of the new buffer in the iorec-table and you'll be ready to rock.
Restore the iorec-table when your program is about to terminate.

I don't have my Atari book's here at work so I can't give you the exact layout of the iorec-table. Someone else has to give you that additional information and (if GFA-BASIC doesn't have the iorec-function) give you the information which bios/xbios/gemsys call returns the address of the iorec-table.

Good luck,

My version of Papyrus keeps crashing when running under MiNT 1.12
Firstly it wont let me print in the background then about 50% of the
time is says it cannot find the MEMORY.SYS file, so I then have to
exit Papyrus and reload it to get it to work. Then as if that isn't
enough it frequently tells me I have more than 255 font families. In
reality I have about 12.

Whats going on? Help please!!

System: Falcon (Tos 4.01) 4mb RAM, 65mb HD and FPU.
using NVDI 2.5 and speedo 4.2.

Hi,

I'm looking for a pin-out diagram for an RGB monitor connector. At some time in the past I managed to fix up a CGA monitor into an RGB monitor, and have successfully used it with an ST. Now I'd like to connect it to the Falcon, but I am not sure what to do about the individual R G and B common (ground) lines. Also, which monitor detect pins are to be grounded?

Any help is appreciated. Thanks!

No, version 4.4 handles mapped and 24 bit colour as well in any ST/STE,
TT or Falcon graphics mode. No graphics cards are supported yet.
(I guess the name may be a little confusing nowadays.)

There is only a beta version available now (see my earlier message in this
thread), but the general release is very close. It would help if a few
more people emailed their thoughts about the beta, though. (hint, hint)
All suggestions and questions are very welcome.

> It can handle jpegs aswell as gifs. Use med res if no high res

Version 4.4 reads Targa, PPM and (X)IMG as well. It also writes GIF, Targa
and PPM.

>monitor available. It can be obtained (as well as the above mentioned utils),
>from ftp 146.169.43.1 in computing\systems\atari\umich\Graphics
>as mgif42b.zoo

A smarter move would be to fetch the _very_ much improved version 4.4beta
from my site, rand.thn.htu.se, as /pub/incoming/mgif/mgif0216.lzh.
This version was uploaded yesterday and new ones are made available as
they get done.

From: sar@crash.cts.com
Message-ID: <D46631.BFq@crash.cts.com>
Source record: 27613

Sorry folks, but USR has burned their bridges. Sure, their 14.4 were great, but they're old news. Their 28.8's suck! Period. End of subject. And as for service and support? Please, USR who? And it's obvious you have no idea just how useful that "digital display thingy" can be. How do you know when you precious piece of crap (28.8 mind you) USR is attempting to renegiotiate? You don't! What about your effective baud rate, not your terminal baud rate mind you? Was that 21.6 or 26.4 that just flashed across my screen. The Supra tells you right on the front display. (Okay, baud rates so close are a trivial matter, but beat the next point if you can...) Does your USR have a headphone jack? NOT!

And let's compare companies:

1. USR, I have one of your 28.8's and it keep[s hanging up on me for no reason and absolutely refuses to connect at anything faster than 21.6

{Hmm, you might have gotten one of the ones that has a bug in the ROM, we had some trouble with the earlier ones...We can send you a new ROM if you call another number...}

Two months later...Oh look a ROM chip in the mail for a modem I took back along time ago...no thanks...Pitch.

2. Supra CALLED ME!

{How do you like your new modem? What do you like best about it? What would you improve about it? Have you had any problems?...etc, etc.}

It's Great!
The "digital display thingy!"
Absoulutely nothing to improve!
None whatsoever!...etc,etc.

USR is a joke.

I played with SlipKnot on a 486 PC + Windows. It just works on a
standard UNIX account and gives almost the same as Mosaic.
You should try it if you can.

I am almost sure it is possible to create something like this for
the average Atari ST (Maybe 4 MB is required) running under GEM.

If a team of enthousiasts could be formed (people with programming
experience) around the world, it could probably be accomplished in
a relatively short period.

A lot of the buildingblocks are already available on the ST.

Who is interested?

Henk.

Please do not reply to me personally, unless you would like to work
on it.

I'm certain I have to run HSMODEM before Mint, that seems to work but
it still does not allow me to choose 57600 as a valid baud rate on
Serial2 (or any serial port). Even the remapped values don't work.
So is there a way to get HSMOD and Mint to co-operate? Or is there
a small auto folder utility that can set the baud rate after Mint
has loaded to 57600 so I can have pppd just use the default baud
rate instead of trying to set it? Once I get Gcc up and running
properly I suppose I can take a crack at it myself. BTW, the last
GCC I downloaded was 2.5.3 (or something close to that). People
have mentioned that the 2.6.x have problems. IN fact I've heard
I should go back to 2.3.x for better realiability? Is this true?

Thanks,
Sam

Date: 1995-02-18 20:09:24 UTC
From: hallvart@oslonett.no
Message-ID: <3i5k5k$49k@hasle.oslonett.no>
Source record: 27618

I just got copies of a project from the German computer magazine "C't" about how to make an IDE hard disk interface for the Atari ST, but as my German
isn't that good I need some help.

Has anyone out there built this interface which enables IDE drives to be used?
Can it be used with my STE?
I need some more info and tips/advice before I start ordering the components/PCB. And yes, I do have TOS 2.06 which I understand you need in
order for it to work. Is it okay to have the ROM chips in the IC sockets for
TOS, or do I *have to* use the TOS extension card for it to work with the IDE
drive?

Hallvard, Oslo, Norway

Do you have anything to back that statement up? Tell me something
that a Supra (of your choice) outperforms my USR DS V.everything in!

The only thing I can come up with would be the price...

> Especially their 28.8 models. Believe me, I know from experience.
> Besides, they've got that nifty little digital display thingy :).

If you compare modems by colour, shape and useless displays then
maybe it`s time for you to change your criterion of a good modem.

I`ll gladly admit that Supra makes great modems, but so does USR
and Zyxel.

Rob, the "General Purpose Output" is an extra bit from the Yamaha sound chip that is not used. Atari put it to the monitor port for your use. However, it is no longer available for Falcon machines. On the Falcon it is used to toggle the internal speaker on and off.

Your composite sync is available on ST's with a modulator built in, or can be created with two resistors, two diodes, and a one transistor. The whole project to built a composite sync extractor is contained within the OVERSCAN project on most ftp sights. If you have a modulator, the the composite sync is usually on one of those pins going to the modulator. Also, pin 2 of the monitor connector has composite video (if a modulator is installed), but the sync is easily extracted with a diode.

However, before you connect this monitor, MAKE SURE IT IS COMPATIBLE WITH NTSC (or PAL if you are in Europe) sync signlas!!! Otherwise, you could blow it to the moon!

: S.Lai

It's exactly what it says. It allows you to mix another audio signal with the monitor audio signal. It goes to the audio pre-amplifier which goes to the monitor and modulator, if you have one. IT IS NOT AN INPUT TO AN A/D CONVERTER. It's just a way to hear two things on your monitor. You could connect your modem's speaker output to this input and hear your modem on your monitor instead of the modem. This way you can control the volume.

Basically, it's not too useful.

Rich

AN>"grrrrrr" - Worf
```

Anthony,
If you look under the Megafile 44 HD, you'll find three DIP-switches.
You don't need a screwdriver, they're on the outside of the case.
Number +5M+�/ ++vZ +A- + 2 and number 3 can be used to set the
ACSI-device number. Number 1 is a hardware-setting: it controlls the
second SCSI-port/connector inside the Mega 44. If you switch number 1 in
the OFF-position, you disable that secondary port.
By the way, I tried to hook up an Apple CD-ROM-player to this second
SCSI-port, but untill now without success. Don't know if there is a
hardware-reason or a software-problem (probably driversoftware).

660. Help needed: 1.44MB disk drive circuit

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-19 17:26:47 UTC
From: hallvart@oslonett.no
Message-ID: <3i7v0n$rqu@hasle.oslonett.no>
Source record: 27541

I'm thinking about adding a 1.44MB disk drive to my Atari STE, and through time on the net I have gathered a lot of articles in the newsgroups and email about this.

But I need to know the specifics and would like to know if someone has actually made it work, and what kind of HD/DD switcher circuit they've made.
I already have two circuits available- one with a pre-programmed GAL chip, and another simple one with a couple of TTL chips. I just don't know which one (or if there are other better circuits available) to use.

I'd like to be as flexible as possible, being able to add a 2nd drive later if I need it- either 1.44MB or 720K. I understand one of the circuits I have doesn't let me do this.

And I need to know which drive I can use. I have a Sony MPF 110-03 (720KB) drive in my STE now, and I was told that a Sony MPF-520 (1.44MB) would fit exactly the same way regarding holes for screws etc.
Maybe I could even replace the plastic front/eject "button" with my 720K's front/eject "button" so I don't need to make the eject hole in the case bigger.
Anyone got any experience with this?
I've also heard that it would be wise to use a new 16MHz oscillator instead of tapping 16MHz from the ST, as it would "confuse" the machine if I tap this signal for another source (exellerator etc).

Hallvard, Oslo, Norway

>but even these are configurable if you get the ICD Pro-Utils.

IIRC, all newer Quantum-drives can be configured to use parity or not. Some have a jumper (and that actually works), some have a jumper that doesn't work (!!!).

A possibility to turn off parity is by command. ICD's BOOTFIX can do that, as does Diskus, SCSI-Tools and the HDDRIVRER 4.x can do that as well (AFAIK).

However, a computer with a SCSI-bus capable of generating parity is required to doing that. Falcon and TT will be fine, as most other external adaptors, i.e. Link-II's and compatible ones.

A MegaSTE is not suitable for the job.

Either you are trying to use 720K or 1.44Mb disks - or the mechanism is
faulty.

SF354s have been obsolete in the Atari world for over 4 years now. I don't
think they have been made for 6 or so. Time to upgrade.

:-)

ICD's Bootfix program does exactly this. However it will only run when an
ICD AdSCSI or AdSCSI+ is connected. Because these can talk to the drive
with or without parity.

668. Getting MintNet to work

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-20 04:29:24 UTC
From: bgilbert@natinst.com
Message-ID: <3i95r4$7sj@falcon.natinst.com>
Source record: 27545

First off, thanks for the replies on getting BlowUp to work with MiNT 1.12, it works nicely now. My next project is getting MintNet to work properly but I am running into difficulties. I got the MintNet 0.70 package from atari archive as well as a few of the net utilities such as ping, ftp, udpprobe, etc.

Config info : Falcon030 4MB, TOS 4.04, MiNT 1.12

My first problem is that MiNT does not load (it just hangs) if I put SLIP.XIF in my mint directory, or if there are no .xif files at all in the mint directory. The only way I can get it to work is to put dummy.xif in the mint directory. I didn't see this mentioned in the docs anywhere and earlier versions of MintNet didn't seem to even have the dummy.xif file. Also, the version of 'route' which came with the net-070 package just crashes on my machine reporting "killed" immediately and dumping me back to the shell, no matter what parameters I pass to it. I ftp'ed net-056 and the version of route included with that doesn't seem to have the same problem.

My other problem is with ifconfig. I have the following lines in my rc.net file which I execute at startup :
ifconfig lo0 addr 127.0.0.1 up
route add 127.0.0.0 lo0

Everything seems to work fine and when I run route without arguments it says the network is up. However, if I try to do ping or udpprobe (or ftp, telnet, etc), the particular program always crashes and reports "illegal instruction". I know it is not a problem with the application programs, since if I don't run ifconfig or route, the programs run successfully (and the nameserver searching works) but just report "network is unreachable" as I would expect. I don't know what else to do because I have set everything up according to the MintNet docs and all I get is programs crashing when I try to test the loopback interface.

Any help would be greatly appreciated! I know it should be possible to get this working, and I feel I am so close but maybe there is some crucial point I am missing out on. I would love to be able to do FTP and Lynx and X from home (although I am having problems with the X port also but I will save that for a later day :).

Regards,

>insisting that it was no good and required a shell.

Yes but to use all its good feature you do need a shell, one or two things
that come to mind is Batch uploads, not very easy with out some form of shell,
the other is the ESC command option, this some times is needed to be turned on,
and the resume option...

If fact I found a shell some time back included with some other
comms program, but only had some features, it was called GSXRX19
from memory, but my copy is stuffed, one of those problems when you
use cheap floopy disks...

I still stand on what I posted, it still needs a Shell to get the most out of
it...

> made it work, and what kind of HD/DD switcher circuit they've made.

I tried this on a STFM, using the simpler logic switcher circuits. I tapped the clock off the Shifter 16 Mhz output (buffering it will help) & used a Teac 1.44 meg floppy. The results:- I got it to read 1.44 meg floppies o.k, but could never get a reliable format or write operation.

I had a WD 1772-02-00 chip in the STFM, If I had swapped this for an AJAX it might have worked. Still, you never know until you try.

Boxkite is around at hensa (I think), or possibly uni-stuttgart. But
I've just got hold of, and registered, Freedom - a non-modal file
selector which happily works with long filenames and stuff. A very
cool FS, IMHO.

No, it doesn't background print under Mint :-(

As for the rest, this is mysterious. Perhaps you are running out of
Speedo cache, or your papyrus.inf file is corrupt.

Hmmh Chris,

I'm a little confused ATM, you're both saying the same, aren't you? Take a look:

------------------------------cuthereplease------------------------------
MiNT

If DRVIN and the drivers are started before MiNT only a little of the functions will remain. That's why DRVIN and the drivers should be started after MiNT. In this case all functions are realized as under TOS, but no more. Redirections and sleep and other plays are impossible with this file handles. I don't know whether the AUX-device switching for the aktual process will continuosly work. I use neither MiNT nor MultiTOS. As long as no MiNT freak is to be found who takes over the adaption and support, no special versions for MiNT will exist.

------------------------------cuthereplease------------------------------

However, s. o. on a German newsgroup said to start HSM _before_ MiNT. But your mileage may vary ...

I have a TT030 with 4MB of ram, a 48MB HD and a 19'' SM194 monitor.
This is the hardwareconfiguration a I bought it two three years
ago. Now when I worked with my system I got the message of a bus-error
on the screen and the system chrashed. When I tried to switch the system
off and on the system reported immediatelly 2 BOMBS, when pressing
the reset-button the harddrive came up but when the mouse from the
GEM-desktop was visible the system chrahed again with bombs. After
some further attempts to restart
irregular pattern came onto the screen, which were changing
when I moved my fingers towards the serial ports at the back-panel.
When I turned the system of for the weekend it worked again.
Do I have defect memory or is something wrong with graphics-hardware?
Has anybody an idea how to solve this big problem?

You are probably missing the GAL that is needed to get the FPU to
work in the MSTE. Check with your Atari-dealer if he can supply
you with the neccessary chip.

If you have the GAL then maybe you have a faulty motherboard. :-(

Just to make sure, _some_ of the LPS drives do not recognise the PO-jumper
correctlym due to a bug in the firmware.

My LPS 270S with firmware 5909 is such a model. Newer version are around.
Enabling parity via command is the only option with these drives.

Updates of the firmware ought to be possible, but the drive has to be returned
to Quantum ...

I am not aware of the latest Lightning or Mavericks. Do they have jumpers at all?

Could be.

IIRC, some Mega STe need an additional dual in line IC, known as a GAL, to be
fitted alongwith the FPU. Is there an empty dual in line socket near the FPU?

Does anyone know if a version of the kernel is available yet or when it will be available, that works with Falcon SCSI.

When I run the kernel it recognises the SCSI drives I have attached (I dont have an internal IDE) but then it gives me:

Unrecognised HD interrupt and hangs.

I read that in an earlier version of the kernel there was a problem with interrupts on the Falcon SCSI, so I guess it has still not been resolved.

I really dont want to waste money on a trashy internal IDE unless I really have to.

Please, if anyone knows of a way to solve this or has any info to Linux working on my SCSI Falcon mail me a.s.a.p

Thanks in advance

Paul Blagay

From: dave@minuet.demon.co.uk
Message-ID: <AB6ED62D966847A05@minuet.demon.co.uk>
Source record: 27558

Greetings Atari people.

First the apology.

I am not an Atari user nor a regular reader of this group so if the
following question is in a FAQ somewhere or was answered in the near past
etc. I'm very sorry.

Now the question

A non net using friend with an STE1040 has a mouse problem. At random, he is unable to move the pointer left to right. Up and down is OK. This can happen any time from just after power-up to 4 hours plus into a session. He has tried the basic things like checking leads and buying another mouse. Rebooting gets control back.

The odd thing is, it only happens seems to happen to him! Other people use his machine with no problems. His current thoughts are that static is to blame but this does seem a bit unlikely.

Is this a known problem on STs? (In the Mac world there was a bad batch of mice some time ago).

Any help please. Email would help.

Thanks in advance for your wisdom

Dave.

688. ikbd scan code vector

>in size?

Yes, this is possible since the TT has a standard SCSI bus. Nevertheless
there are a few drives TOS cannot boot from because these drives require
hard disk drivers with bus arbitration support. TOS does not support this
and thus can't boot from such drives (especially Quantum Empire 1080S). As
external drives such drives work well if you use a hard disk driver that
supports bus arbitration (i. e. HuSHI or HDDRIVER).

The adapter has nothing to do with partition sizes. It depends on the
software you are using and on nothing else.

Sorry, still can't get it to work. Here is where I am at:

Problem: run xinit and it replies that font fixed can't be found.

Set up:

fonts in /usr/local/lib/fonts/{misc|Speedo|and so on}

$X11 is /

The case of the dirs is all as it is in the zoo arc.

Any thoughts?

srp

695. TOS and the TT

Newsgroup: comp.sys.atari.st.tech

Hello all you people out there in net land, I have a problem that I'm sure someone out there can help with...

I opened my BIG mouth to a friend the other day and stated that I had seen a posting on this newsgroup about a BUG FREE TT TOS file (or almost bug free) that was available via FTP that would allow those of us with a Eprom burner to upgrade !!!!

Was I dreaming ???? I have been through all my files and can not find it (I was sure I saved it, cos it was of interest) Is there such a file ????

I think it was on a German FTP site but like I said maybe I was dreaming !!

If anyone else saw the post (and maybe saved it) could you please advise....

Thanks in advance.....TTFN

> ...
> The only problem I can think this could cause would be with faulty Midi
> equipment - the ST no having opto-isolators on the serial port.
> ...
> How is the serial port accessed within Cubase?

I am currently using a 1040STE, using the serial port as a second MIDI-out.
The cable connects the serial port's TX with the MIDI-IN through a 1K2 resistor :

DB25-pin1(GND) to MIDI-pin2
DB25-pin2(TX) to MIDI-pin4 through a 1k2 resistor
DB25-pin7(SIG_RTN) to MIDI-pin5

Don't worry about the optocoupler, since this one is already present at the
MIDI-IN port of your sound module (or whatever).
A MIDI-out port doen't require an optocoupler.
To use the 2nd port with CUBASE, you need to install a driver 'xport.drv'
in the MROS folder.

I figured out this only works with a 1040STE, not with my old 1986 STFM.
This depends on the output drive capability of the serial port, which should
be enough to drive the LED of the optocoupler in a saturated 'ON'-state (10mA min).
Some Atari's serial ports don't meet this requirement.

697. Caches and DMA

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-21 13:33:35 UTC
From: jacquesa@cs.man.ac.uk
Message-ID: <3icq3f$eve@m1.cs.man.ac.uk>
Source record: 27561

Hi, just a little techie question....

What does the 030's cache do about other DMA devices changing memory that it has in the cache? eg. If the MMU decided that a given location should be stored in the cache, and the BLiTTER then changed the contents of the location.

Would the CPU notice the change, or would it not be changed until the cache was flushed???

This also applies to memory mapped IO....

Cheers

Anthony

>Unrecognised HD interrupt and hangs.

You have to change some defines in drivers/scsi/atari_scsi.h:
#define I_HAVE_OVERRUNS 3
#define CAN_QUEUE 1

This should give you a SCSI which is quite slow but works if you are using
SCSI only (SCSI *and* IDE produce problems).

From: bm827@FreeNet.Carleton.CA
Message-ID: <D4Czyu.GrB@freenet.carleton.ca>
Source record: 27585

It is most likely broken solder joints where the mouse plugs into
the 9-pin socket under the keyboard.

To repair this, you can either swap keyboards with someone OR
you can disassemble the keyboard (lots and LOTS of tiny screws)
and resolder all the connection joints. Watch the pads when you
are reassembling!

Hope this helps.

Not all of them, Rich. The FaxModem v.32bis has the display, yes. However, the 144LC has no display, and I think it's Class 1 fax only (which is far inferior to Class 2, IMHO). That's a good price for a 14.4k modem alone, though, so I'd snatch it up if I needed to upgrade from a slower modem.

RM> connected? So you're limited to 1/2 the area?

All access to the cartridge is done at even addresses, so there's no point in using the A0 line. You get data a word at a time. It would seem that selecting an address that can be readily decoded in hardware would allow you to create a R/!W port by toggling modes.

The Atari ST/TT needs 15.75 kHz horizontal sync. VGA is 31.5 kHz. I've no
idea what runs at 35 kHz.

AM> developed

So is anything from Damien (DMJ).

AM> DMJ's looks a lot slicker, but is kinda slow...

DMJ GIF is _deliberately_ slow in the unregistered version. The registered version is more than 3x as fast.

The fonts should be in /usr/lib/X11/fonts (at least that is where I have
them and that's where they were in the archive). I had a couple similar
problems like this, which were :
1) For some reason, my Speedo font directory was named "speedo"
instead of "Speedo" which is the correct name.
2) I had /usr/lib/x11 instead of /usr/lib/X11

I guess these are both problems with the case of my file and directory
names (I had the same problem with "x" vs. "X") which was not supposed
to be a problem but maybe my version of zoo is weird or something.

Have you set UNIXMODE to /ru ?
Also, you may want to move the X11 directory to /usr/bin from /usr/local
(IIRC).

The way I run X now is:

```
pty
kbd -n
X &
twm &
xterm
```

It seems to work better like that (though it still crashes a lot).

MiNT is an extension to TOS, providing multitasking (only of TOS programs without MultiTOS), extended filesystem support (ever fancied long, case sensitive file names?), multiuser support, and many other things. I'd recommend to everyone to start using it. Even if you don't use it yourself, it will encourage more programmers to use its features and so we'll all benefit in the end.

Oh, BTW, it is owned by Atari and so isn't just some unofficial hack.

Why not use Lynx for reading News ? Just set the Enviroment-Variable
NNTPSERVER=<your NNTP-Server> and invoke Lynx with "lynx news:<newsgroup>".
It always worked fine, when i tried it. Anyway, i compile an nntp-able Version
of TIN for MiNT. Perhaps i can send it to the Net.....

Yeah, I knew about that but the cost is prohibitive for the sole purpose of
having a B: drive. I guess what I'm hoping is that there's someone out
there who has found a way to put two 1.44Mb drives in the same space one
drive currently takes up, and have them addressed as A: and B:. Wishful
thinking, I know, but ya never know!

You should try the precompiled vmlinux PL4 (minor patch #39) that is
available from ftp.phil.uni-sb.de:/pub/atari/linux/getting_started/vm*.

IIRC the precompiled vmlinux-image lacks ACSI and IDE support, but that
shouldn`t be a problem for you. :-)

Been thier done that, it does not work, you need line sync during
the Frame sync period, you have to use EOR gate...

Hi!

Please who could help me? I have problems to open some Atari-formatted disks with my Mac. I m using the Atari as well as the Mac for sequencing.
It works with my one Atari but it s a 1040 mega ST F FM E , cause I did a lot of tuning. I think the problems are the different TOS s.

Greetings and thank you,

Paul.

I believe that the composite signal on pin 2 is actually contains composite video i.e. it contains composite sync information as well as picture info.

You may find that the composite video signal can be connected to a monitors composite sync input (requiring the same timing but TTL levels and no picture information) and the monitor will sync up to it. Try it and see.

Maybe there are ^M in the file fonts.dir, look for them in the the vi and delete
them. In fonts.dir there should be a line like the following:

5x7.bdf fixed

Then the font accessed by the name 'fixed' is loaded form the file 5x7.bdf.
When installing more fonts you should use the tool mkfontdir and add the 'fixed'
line after you made a new fonts.dir.
For easy-to-use font names you can also make a file fonts.alias with lines like
this:

font-abreviation full-font-name

full-font-name must be the 'endless' names ('-adobe-12p-42-4-3-4-5..') generated
by mkfontdir, the abreviation is usually the file name without the .bdf extension.
But be carefull: Do !not! include 'fixed' and 'cursor' in the alias file ;-)

My understanding is that the Falcon does contain the hardware (internally)
to support 2 floppies. So if someone could find two thin 3.5" HD
mechanisms that would physically fit in the space and didn't mind a little
soldering, it could probably be done with little difficulty.

I have a 1040STfm, when I turn the computer on I get this high
pitched whine coming from the inside of the computer. I opened it
up and could not pin-point the source of the high pitched sound,
and becomes higher with disk activity. Could it be the video circuitry?

Also I should say that it has nothing to do with the monitor, it does
this whether the monitor is on, off, plugged into the ST or not.

In article <D4BqGt.HLJ@gold.ac.uk>, mua01apa@gold.ac.uk (Anthony P Aldridge) writes:
|> where's the vector for scan codes from the ikbd?
|> I've got documentation (kbdvbase) for mouse packets,
|> joystick data, midi, clocks, but basic key presses?

I hit a similar problem several years ago when I wa writting a custom MIDI/IKBD driver and needed to pass IKBD data back to the system. Basically ikbdsys reads the IKBD ACIA, detects mouse/joystick messages and calls the approapriate handlers but deals with keypresses itself. The handling of keypresses is lengthy & complex and there isn't any documented entry point to this code.
I can think of two fixes, both somewhat unsatisfactory:

(1) Stuff data into the keyboard buffer. Be aware the in most docs have got the way this works mangled - the Compute TOS book is particulary bad. To get it right, write a small program that watches the head & tail pointers and figure it out for yourself. The problem with this solution is that you can only simulate keypresses whose (only) action is to place characters into the buffer; many GEM programs read the current state of the shift/alt/ctrl keys which cannot be emulated with this method.

(2) Choose your own entry point into ikbdsys, i.e. just after it reads the IKBD ACIA. Then you can emulate anything you want comming from the IKBD.
I found that while this entry point changes in different TOS versions, at least in the two versions of TOS I looked at (1.0, 1.62) the ikbdsys code was the same so you could take the entry point as a fixed increment off the ikbdsys vector. Things may have changed in the TT/Falcon TOS versions - you will need to disassmble them to find a suitable place to jump into ROM. This all sounds very messy but since there aren't likely to be too many new TOS versions released in the future so you may only have to deal with 2 or 3 variations of ikbdsys if that. This is the solution I adopted for a while until I found a better way to write my driver that avoided the problem altogther.

: >there's no system call to increase the buffer.

: No, there's no call 'increase_midi_buffer()', but that doesn't mean it's
: impossible to incerase the midi buffer. In fact it's quite simple...

As far as I can remember (I've been away from my ST too long...) it would just be a matter of altering the iorec for the MIDI system. That's what I did to play around with the keyboard system, so I assume it'll work for MIDI.

If not, you could always chuck your own routine into the appropriate kbdvbase slot... :)

Hi, I need help hacking up an RGB connector for the Falcon. I am not sure
what to do about the R G and B grounds (are they to be all tied to the ground?)
Also, which monitor detect inputs are to be grounded?

If you have an RGB adapter, and an ohm-meter, it shouldn't be too big of a
deal to check what the configuration is.

Thanks,

> paths. It looked much the same as my MiNT one.

Well i had another bash at it tonight. The problem seemed to be with the
path:

/usr/lib/X11/fonts

or soemthing like that. I'd had real problems getting the X11 created in
upper case on my MINIXFS partition. Getting the latest GNU file utilities
solved this one. I just dumped the directory structure and rebuilt with
these new tools.

I then found that my shell (KSH 4.8) didn't like upper case directories
much. Using the 'sh' supplied with MiNTTOS 1.4.1 solved this problem.

After this I found I could run 'X' and get the server up. 'xinit' also
worked - though I'm having problems with 'startx' due in part to the lack
of the '[' command. I can't seem to extract it from the MiNTTOS archive.

Anyway I'm nearly there - so srp20@cam can't be far of either from what
I can tell.

Looks good!

:-)

Roland.

738. HD drives and stuff

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-23 03:55:57 UTC
From: P.A.Booth@bradford.ac.uk
Message-ID: <1995Feb23.035557.13802@bradford.ac.uk>
Source record: 27505

Having downloaded the stuff from Hensa and couldn't manage to get it to work, (bad lzh headers; sorry Danny it's probably this 520 I'm using :-), it doesn't seem to be able to be even to unarchive a 320k zip :( ), I was wondering a few things about fitting high density drives for an STe.

1. How stable are they? Is a kit bought from say, sys sols any better than a bodge job (if it's well done bodge that is :-).
Are the kits any good?

2. Has anyone managed to get a blitz copier working with one?
I have a pretty strong feeling they wouldn't work, or would do stupid things if attempted, but since I'm not sure how they work exactly I can't really judge for myself...

3. Can you fit a high density drive externally?

4. Do high density drives read/write PC disks or have they got a Tos format of their own?

Thanks in advance for any help,

Paul.

To write to the cartridge you would normally use "read byte" (thats a 68k op)
There are two extra lines on the buss determining wether this is supposed
to be HIbyte or LObyte. Use any address (odd or even), skip the data
(unless your hardware has something to tell you).

REMEBER the extra lines are a litle bit off sync (Important if you roll
your own hardware. They are a bit early!!)

And of course your hardware is supposed to check out for these HI/LO byte
requests.
(A WORD16 request sets *both* of them to zero)

I have an article somewhere, that describes how to create a R/!W port.
I will look it up, and post the info here.

744. MiNT-net & HSMODEM

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-23 10:16:52 UTC
From: Craig.Graham@ncl.ac.uk
Message-ID: <3ihnak$16q@whitbeck.ncl.ac.uk>
Source record: 27513

There was some discussion earlier about whether HSMODM was required by MiNT-net, and I have checked it out on my f030....if you don't install HSMODM, you can connect, but a CSLIP link will hang after approx 2Kbytes have been transferred over the link. With HSMODM, all is well. I cann't imagine it being reciever overruns (I've got a 32MHz f030 & only a 2400baud modem).

Craig.

745. MiNT-X & the Fvwm window manager

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-23 10:25:10 UTC
From: Craig.Graham@ncl.ac.uk
Message-ID: <3ihnq6$1bb@whitbeck.ncl.ac.uk>
Source record: 27514

Has anyone else tried using the Fvwm window manager for MiNT-X instead of twm ? (For those of you who haven't seen it, Fvwm is a Motif look-a-like originally written for linux, which uses about half the RAM of twm).

My problem is that, although the managar runs OK and most stuff works great (Virtual desktop, 3D widgets, icons, etc), whenever I try to launch a program from an fvwm popup menu it crashes, and takes the Xserver down with it....

I compiled it with gcc2.3.1 using -O2 -m68030, and linked with MiNTlibs pl44, MiNT-net v0.55, the first release of Xlib & portlib 0.60.

Any offers? Of course, a working binary would be even better & save me the trouble.....(note that the current Fvwm for MiNT-X distribution is source only - so if you aren't up to compiling your own, better hang loose for a while 'til someone makes a binary release).

Craig.

>
>Could someone who has installed GCC please make me a binary, (and possibly
>upload it to hensa...)

It is already on Hensa! The binary is called 'rtftohtml', you could try renaming
it to rtftohtml.ttp and then run it from TOS. I compiled it using MiNT/gcc so
I am not sure if it works from TOS, but you could try anyway!

So get the archive from Hensa again and extract this file and give it a go!

Hope it works,

Barry

PS. I ported it and uploaded it! :)

748. T28e and FPU?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-23 12:17:06 UTC
From: shardie@cs.strath.ac.uk
Message-ID: <3ihuc2$k6o@dunlop.cs.strath.ac.uk>
Source record: 27517

Does any one know if it is possible to use a MC68881 or MC68882 FPU with the T28e as when I installed it there was an option to fit a switch marked FPU? Also, any idea what the other section where it is possible to fit a switch is for- it's marked FROM (I think this is Fast ROM)?

Thanks,

Simon Hardie.

PS!!! 155.198.1.40 is more reliable!!! - (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
--------------------------------
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.
```

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

- - - - - - - - - - - - - - - - - - - -

Titan Designs in the UK had a version of their Reflex board which would go into a standard STE using an L-shape CPU adaptor, into which the actual board would plug. Since the standard STE case is so small, you need to cut a big slot for the card in the back.

S.Lai

P.S. The Reflex boards are fully GEM compatible.

Change your display to something like 640x400x2 (ie, monochrome) and try
again. The Falcon is totally crippled by its bus design... high
resolution, or even low resolutions with lots of colours slow the
machine down to ST speeds.

You would have less problems if you used "pc_exchange" on the Mac to format
your disks. The Mac has it's own ideas about what is "proper Dos-formatting".

If you have MultiTOS, you just set the following in your gem.cnf:
SHELL=d:\app\gemini2\gemini.app
(or wherever you installed Gemini)

I don't know if what you want to do is possible without MultiTOS.

James, it's your power supply. The 1040's (and others) use an internal switching power supply. It runs at a high frequency. If you can hear it all of the time, then you:

a> Have ears like a dog
b> Have a power supply that is getting tired and will "retire" soon.

You disk drive drains power and causes the power supply to work harder, hence the louder it gets.

Rich

Thats interesting. I have a CSLIP link over my overworked 2400 baud modem.
I haven't got hsmodem installed, and I find that if i use dip to dial in
and connect I get corrupted data and then the link dies. If I use ConNect to
dial in and connect and then run slattach the link performs perfectly.
I guess ConNect sets up the serial port correctly and dip doesn't without
hsmodem?

: FPU? Also, any idea what the other section where it is possible to fit a
: switch is for- it's marked FROM (I think this is Fast ROM)?

I don't have a T28e, but I do have a T25 installed in my Mega, and yes it is possible to install a FPU. In my machine, I've got a JRI FPU board piggybacked on top of the 68000 on the T25. Of course, since the FPU is installed in memory the same way as the FPU on the AdSpeed and SPF004 board, nothing supports it, so it just sits there most of the time. I think you'll probably have the same problem, should you successfully install an FPU. (AFAIK, you really need an 030 to get good use out of an FPU).

Sounds sensible. I unTARed my MiNTTOS1.4.1 on my Linux box tonight to try and extract '['. This turned out to be a link to 'test' - so I just made a link to 'test' on the TT.

> > Anyway I'm nearly there - so srp20@cam can't be far of either from
> > what I can tell.
> >
> Oh well, I had best press on then (as Clare Rayner would say) and see
> if I can figure out what is going on.

Its not easy is it!?

I've spent another 3 hours at it tonight - and can get xclock running - but not xterm or tvm. I've spend ages tuning my various startup scripts so that all the paths are correct and environment variables are set right. I seemed to have been caught out badly by a TAR which only understands lowercase 8.3 names!

My ksh shell also is not happy with uppercase directory names - though I found I don't actually need to run 'sh' to use 'startx'. My ksh shell does seem to cope.

Other than that I just don't know why xterm and twm don't work. I'm even using the supplied .xconfig(?) (once I found it ;-). I assume its something to do with the problems mentioned in the readme file - and various other posts - to do with crashes when programs are run in one order or another.

Actually I can run twm from the 'sh' - which is generated if I have no .xconfig at all.

Unfortunatly it starts up by complaining that it doesn't know what white and black are - and the drop down menu comes out white on white! I wonder if a RGB.TXT file might help here - but haven't pulled it of my linux box yet.

Roland.

I have no problems with CSLIP without HSMODEM.

I fully agree there is no reason *not* to use HSMODEM - and many reasons
to do so, but I still maintain that it is not necessary for MiNT-Net to
work, at least not on my TT.

:-)

I'm wondering if this is the reason I'm getting 8.3 lowercase unTARs with
a supoosedly good TAR program?

I've tested the TAR file itself on a Linux box and its fine.

Hmm.

Roland.

In ST-lo and -mid.

>VGA is 31.5 kHz. I've no idea what runs at 35 kHz.

ST-high is about 35.6 khz. A common VGA-monitor won't sync to this frequency.

My Atari disk drive's write protect detector is knacked.

It says a disk is write protected a lot when I know it isn't.

I am an expirienced user, so I know what write protect and tabs
mean.

It's an Epson drive, I replaced the SS one 4 years ago.

Can anyone help?

Thanks. James.

The display on the Supra is nicer - but it would be nice if they could be
bothered to put their modems through BABT approval in the UK!

Its legal for them to be sold unapproved. Its illegal to use them.

I certainly *won't* be buying a Supra V34 even though I like the look of
it very much.

: Greetings and thank you,

: Paul.

Paul, make sure you are formatting your disks in an IBM format on your Atari. TOS 1.04 and beyond does this. If you have versions 1.00 or 1.02, then use DCFORMAT to format them.

Also, make sure your Macintosh is able to "mount" DOS disks. This means you must either have System 7.5 and have the "PC Exchange" extension active, or have "DOS Mounter" active for other System versions. If your Mac does not have either of these utilities, then you cannot use IBM or Atari disks on your Mac. Believe me, there's no other way to to use your Atari disks on a Mac and visa-versa.

: I maintain what I said, pin 2 of the monitor connectors carries a composite
: synchronisation signal (I saw it on a scope [the ST is a MegaST1]).
:
Well I've had some ST's during the past, and on all of them pin 2 contains
a composite *video* signal, with picture information. I've actually used
this pin to connect some of my ST's to a videorecorder.

On old ST's without RF-modulator pin 2 is not used. This is at least correct
on a old 1040STF I'm looking at this very moment. Don't know about Mega ST1,
but since this was the lates Mega ST I guess it has a modulator and therefore
a composite video on pin 2.

However this signal can be used as composite sync with most monitors and TV's.
My old Grundig colour-TV didn't have separate sync-lines on it's SCART-port,
so I used pin 2 to feed the composite sync-line. This worked fine for several
years. I have a Falcon now, but I occasionally hook up an STE to my TV using
this old cable, and it works fine.

I switched from an STe to a Mega STe. I found that some games wouldn't work at first. If I switched the cache of or switched it back to 8mhx in some cases that most games would work.

The only game I regularly use(d) which I still can't get to work is Championship Manager '93, a soccer management game published in the UK by Domark.

> > white and black are - and the drop down menu comes out white on white!

I had a fiddle and managed to reproduce the problem on my machine. My guess is that your colour database /usr/lib/X11/Xcms.txt is named /usr/lib/X11/xcms.txt, or it is missong. Here's a cut down version that should work:

```
--------------8<---------------------------------------
XCMS_COLORDB_START 0.1
black CIEXYZ:0/0/0
white CIEXYZ:1/1/1
XCMS_COLORDB_END
--------------8<---------------------------------------
```

I have now got my system working so that it has a meg free when running twm and xvt with tcsh. As soon as someone uploads a binary version of fvwm I expect to be able to boot with 1.5 megs free - almost as much as I have under GEM.
BTW - can someone point me to a version of imake?

Most people (including me) seem to have a zoo version that copes with the long filenames OK but creates all the files in lower case. Apparently there's one around somewhere that works properly. As for tar, that apparently needs UNIXMODE to be set properly. I had it set right anyway as I think the .rc file that came with tcsh had it in.

The RTF to HTML converter's RTF stylesheet can't be loaded by
AtariWorks; you may need Papyrus Gold (though I haven't tested it in
Papyrus, since I don't have it).

>(who wants a www page, but cannot be bothered to learn HTML....)

It's very, very easy, especially if you have any experience using TeX or
some other markup language.

>> nice GIF viewer that allows upto 4096 in a HAM mode. So if I can
>> convert them, I will be somewhat happier.
>
> Gemview will do the conversion (3.10 is the latest version).

I got v3.12 from Dieter some two weeks ago. Unfortunately this very
version *can't* touch GIFs at all, due to some licence-debate with
UNISYS/Compuserve.

Dieter has told me however, that there will be a solution soon, if it hasn't
been straightened out already: GEM-View is shareware, so it
isn't affected by UNISYS/Compuserve's claims. Commercial programs, like
Imagecopy and others, are subject to the licence claim made.

BTW, GEM-View fans in Sweden can register GEM-View via me. [End of plug].

Yours sincerely

-Sven-

I have a mega st/e with a tos 2.05 motherboard useing tos 2.6 roms and
would like to know the useage of the dip switches that are to the front of
the st/e (not the hard drive switches).

Also does anyone have a copy of the SKYLINE cd for sale...

*** PROBLEMS WITH FREEDOM DEMO ***

As the File slider was showing on the right, so I tried
to run it just from the desktop, as a ACC.....

TOS 1.4 can't find cookie, but if I use the JARxx that come with Neodesk,
it finds the cookie, but the ACC does not install, I ran this from
floppy as I thought the ICD drivers were giving problems, if I click
on the desktop menu the system crashes...??

TOS 1.6, finds the cookie ok but has the same faults as TOS 1.4...

All these test were done in Med Res, I did try to run it in Mono
and got the same results......

Freedom Demo does Work, ? when use with Neodesk 3.04, but the file slider
does show on the right.. ^^^^^^^^^^^^

Is Freedom only ment to run with TOS 2.05/6 or just a replacement OS Like
Magic...??

Tried all test in a minimum system, ie, no other ACC or TSR's installed...

If the problems is due to the Doc's being in German, Please can we have some
English Doc's and not cut down ones, FULL ones thanks....

I think that this Kit does not work, you Must use a Ajax chip.
this Kit does not have a Ajax chip...

>2. Has anyone managed to get a blitz copier working with one?

The Blitz copier is a load of Rubish, the Turbo Express is
the one to use, BUT drive 'B must be slower than drive A'...

>
>3. Can you fit a high density drive externally?

I don't think so, that is why Atari it was not used with the Falcon...

>4. Do high density drives read/write PC disks or have they got a Tos
> format of their own?

This would depend on the software used, TOS 2.06 would also need the GAL
for it to work, so forget TOS 2.06

>
> Does this apply to the Falcon as well or can you just plug one in?

Just plug it in! :-)

I _guess_ the GAL (or is it a PAL?) is needed to let the 68881/2
interface with the 68000, which has a different FPU-interface
compared to the 68030.

PS! I just read in Chips 1.75 that the 68882 doesn`t work too well
with the MSTE. Apparently some kind of problem with accuracy can
pop up.

Please, could someone with German as their native language read the
part about 68882-problems in Chips 1.75 and post all relevant facts
here.

810. HD drive probs with coverdisks

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-26 14:46:30 UTC
From: shug0046@sable.ox.ac.uk
Message-ID: <1995Feb26.144630.29942@inca.comlab.ox.ac.uk>
Source record: 27479

I've got a Falcon, and I've noticed the floppy disk drive has problems with 10 sector per track DD disks - such as most coverdisks. Is this an alignment problem? Has anyone else had the same trouble?

Karl Wilkinson.

811. help, my computers dont talk!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-26 16:10:13 UTC
From: mdekker@fwi.uva.nl
Message-ID: <3iq955$jm3@turing.fwi.uva.nl>
Source record: 27480

I downloaded Ghostlink last week, and today I wanted to try it out.
So I connected my ST via a Null modem to my 486. Started stmaster
on my st, started pcslave on he 486. I installed the drive icons, and
tried to open them: nothing happens. Both ports were set to 19200.

I tried something else: I started uniterm on my ST, and the terminal
program of MS Windows on my 486, typed things on my st, they didn't
appear on my 486, typed things on my 486, they didn't appear on my
st.

AAARRRRGH! I NEVER seem to get these null modem things working! All
cables I use work great, they are the same as the ones I use on my
modems. I use a Nullmodem-plug to make a cable into a null-modem cable.
These are the things I tried, none of them work:

ST <-> PC
ST <-> Mac (but I never got Mac <-> modem to work so...)
ST <-> C64

C64 <-> modem and PC <-> modem all work great.

What am I doing wrong? maybe I should disable hsmoda04 ?
HELP!

When the 68000 was released motorola made no provision for an FPU interface. However, when the 68881 was finally released they allowed a memory mapped interface for use with 68000 systems as well as a proper FPU interface for use with newer processors. I assume the MST(E) needs the extra logic to cope with the memory mapped interface whereas on the Falcon or TT it just drops in as everything is provided by the processor.

BTW programs compiled to use the FPU of the Falcon or TT won't work on that of the MST(E) and vice versa as the programming interface is totally different - the '030 has fpu instructions such as fmove, fmul etc, whereas to use it on the MST(E) you have to set various registers.

: Does anybody have any source that will given a filename and a search criteria
: tell with that filename meets the search criteria?

Just use fsfirst()/fsnext(). I don't know where you can get source, but
you could do a similar thing by something like:

call fsfirst() with *.*

check if this matches criteria. If yes then return with filename
If no, then keep going

call fsnext() with *.*
Does it match criteria? Yes? return filename
No, loop back to fsnext()

Or something like that. As for actually checking if each filename matches
criteria, you would want to make up a function to get chars from any
point in a string. Then just see if all the chars which are specified in
the criteria match. If they do then you got a match. You could ignore `?'
and `*' chars.

You probably thought of all that anyhow, but never mind,

Mario...

I can't speak for CoNnect, since I don't use that program. However, the
telecom program we represent, Flash II, has no problem at all setting
Modem 2 and Serial 2 to the highest speeds possible on both the TT030 and
MegaSTE (Falcon too!)

There are some speeds that can not be set, due to clock speed
restrictions, for each port. It's possible that ConNect makes all of its
internal selections available for each port instead of selectively making
them non-selectable.

From: tdcflcn@infinet.com
Message-ID: <3iqrs0$b3h@horus.infinet.com>
Source record: 27485

I am looking for anyone from the ST_CLUB in England.

E-Mail address: stclub@cix.compulink.co.uk

I have just received an update to 3D-Calc from 2.?? to 3.04, and I
am having some problems with some functions.

Hisoft gave me this E-Mail address and informed me that they now support
3D-Calc, if this is true I hope they can help.

The problems I am having are as follows:

When an area is defined for "HIDE", "PROTECT", "ITALIC", etc. and the
"Set Attrabutes" is selected and "OK" is clicked, the area defined is
cleared of all data in the defined area, this is NOT GOOD! I use this
for my bookkeeping for a small business.

When you try to remove the any of the "Atrrabutes" the same thing
happens.

Also the "Merge file" functions does nothing!

Is there something I am doing wrong?
Is this the latest version?
Can I get an older version that WORKS!!?

Is there a program to convert 3D-Calc files to Lotus 123, any version?

I really need to get this corrected if possable or move the files to
another program if possable.

Please responed with E-Mail to the address below.

Thank you for any help.

Message-ID: <3ir2j7$b21@agate.berkeley.edu>
Source record: 27398
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I've managed to set up Mint, MintNet, and X with Xterm a while back, but I had to hold off for a while. I'm trying to start a SLIP connection using DIP and I know I have to be running syslogd program to do this. I got syslogd and syslog.conf from the mintosbn.tgz file and stuck the syslog.conf file in the /etc directory and syslogd in the /bin directory. But now when I execute syslogd with say -d parameter, I get a bunch of path not found errors like:

syslogd: /var/adm/messages path not found
syslogd: /var/adm/lpd-errs: pathnot found

etc, etc.
How does one set up this syslogd program, and what about syslog.conf. In what directories do these have to be in? And do I need to change anything in syslog.conf?

> stars in ST Review.

Congratulations! Well done!

> It was slightly crippled, in that no pictures larger than the ST high
> screen could be saved in other than my own format in the release
> version.

Quite fair, I think.

> It was on ST Formats subscriber disk. As registrations number a (for
> me) rather disappointing 20 to date, I'm beginning to wonder if I did
> not cripple it *enough*, or if the ST market really is *that* small...

I certainly *admire* all you skillful and hard working programmers of
good software for our small but beloved platform! You are great, and whether
you choose to give your stuff commercial or shareware status is
completely up to you. We, the users, are the winners anyway!

No, the Atari market is no that small! Guys like you are already doing your
very best to keep Atari alive. Once your program or game is finished, I think
it's up to us (dealers) and Atari magazine publishers to give your software a
push and to spread the good news by *yelling about it*.

> Now, about to release another shareware program, I would like to hear
> some opinions regarding crippleware. How much is *too* much? Should I
> just release an unrestricted version and hope for the best?

In my (not so) humble opinion, Everest, LED and Semper are programs that strike
the "cripple-balance" just about right! There's a dialogue box or
a short animation sequence reminding you that you *still* haven't registered,
but otherwise these programs are fully functional.

What's missing in the *registered versions* of these programs are the few extra
goodies that would make the newly registered user happy. Some
esoteric (special), but extremely useful, little extra function that
would sweep the floor with similar commercial offerings is what I'm
after here, and I'll do my best to persuade the shareware writers I represent
to include this.

> What do *you* think? If anybody has experience in the shareware scene,
> I'd especcially like to here from you, but all opinions are valid.

My experience in supporting shareware programs and games is only six months old, and guys like Joe Connor (jconnor@cix.compulink.co.uk) can probably tell you a lot more.

My line is clear though. Here's what I'll try to realize in Sweden with the shareware programs I support (Backward, Everest, GEMBench, GEM-View, Selectric and Stoop):

1. Ask the author how many new versions he plans to release during the next 12 months, calculate the costs for sending out disks, deduct that amount from the shareware fee to pay for my actual costs, and give registered users *free upgrades for a full year*!

2. Persuade the shareware authors to include more goodies and (a few) hidden features, only available to registered users.

3. *Use the press!* I myself intend to write a regular column in "AtariMagasinet", just like Joe Connor does in ST Applications. It's a way of keeping up the interest for all the beautiful software I (and others) support.

A piece of good news for all Swedish Atarians with comms in mind, is the fact that (SysOp) Dag Dao of *DaDa & Surrealismus* (dada@dada.ct.se or 2:200/136.0)) will be supporting comms-related S/W software! He's currently negotiating with the authors of LED, Semper, JetMail, CoNnect and others to get the ball rolling.

Wish him luck! And register!

What I think you should do Vegard, is to try and interest a "shareware support centre" in every country across Europe plus Northern America.

Remember: It's risky, expensive and slow for users to transmit money across the borders. The possibility to register via a domestic "post giro account" is essential! If the person who handles the registrations also has some *knowledge* about the programs/games he supports, it certainly makes registration even more tempting to users. It's always good to have a domestic phone number to call. I do occasionally get queries from users: /It doesn't work!../ These fellow atarians are happy I'm there to straighten things out, and I'm glad to help!

> BTW, the program in question is called FrontEnd, and can be described
> as a kind of GEM based "visual GFA basic". I'll post more when I
> upload...

Best of luck, Vegard! Let me see it when you've got something to show me!

Yours sincerely (Ha det!)

>

GEM/3 is Digital Research's 3rd GEM version. MultiTOS has most, if not
all, of the new GEM functions and objects. Yes, the new metafile format
is also new under GEM/3. So basically, we are both correct.

> Hope that helps,
> -- Mario Becroft (mbecroft@iconz.co.nz)
> --

Is Interface 2 sold as a single application, or do I need to acquire it
within some sort of language package? I'm sick and tired of modifying my
resources after I have created them.

Thanks,

Rich

> them non-selectable.

No - you're not quite right. Connect itself also knows exactly about the internal clock speeds of the serial ports and offers only the speeds available for a given port. Connect however offers extensive support for the excellent serial accellerator HSMODA and if a user does not configure HSMODA in the right way, Connect may be offering port speeds which HSMODA later on will not be able to set.

: |> Hallvard, Oslo, Norway (hallvart@oslonett.no)

: Titan Designs in the UK had a version of their Reflex board
: which would go into a standard STE using an L-shape CPU adaptor,
: into which the actual board would plug. Since the standard STE
: case is so small, you need to cut a big slot for the card in the
: back.

: S.Lai

: P.S. The Reflex boards are fully GEM compatible.

Hmmm? Well in my case I have the same question except that I DO
have a Mega STe. I would also need mailing addresses as to where I can
mail order the Graphics card, seeing as how the only atari dealer I know
of around here has moved so that it's now a four hour drive to get to him.

: I am an expirienced user, so I know what write protect and tabs
: mean.

: It's an Epson drive, I replaced the SS one 4 years ago.

: Can anyone help?

: Thanks. James.

Well, I had the same problem a while back, and then of course
with my insatiable curiousity, I took my disk drive apart and screwed it
up. After borrowing my friend's drive out of his old amiga 500, I
finally just bought me a new one. Oh wait,...I was supposed to say
something about fixing it... It may just be your TOS, I know I've done
some screwy things with mine, but I haven't really had that problem
unless I try using A copy at 16 mhz (I have a mega STe) and it only does
it seldomly, although now that I have a fairly new drive I haven't had
the problem...(now I just have problems trying to format odd formats at
16mhz.)

: Al
: (agoold@cix.compulink.co.uk)

I have a Mega STe as well, the only software I've really had any
trouble with are ones that are compiled in some way or another...I guess
the compiling algorithms aren't quite compatible or something...other
than that, mostly just demos don't work. (Which is, once again, probably
because of the above problem). So in the end, try to see if it's
compiled. Some of the older compilers do not work and do strange things
to your machine.

830. Prism, TT res Emulator?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-27 10:37:03 UTC
From: jfergie@xmission.xmission.com
Message-ID: <3isa0f$3g5@news.xmission.com>
Source record: 27397

In a particular issue of ST Format, # 36 July, 1993 to be precise, I saw an interesting ad for a program. It was a TT Resolution Emulator that boasted to "expands your screen by up to four times" The program was called Prism. The mailing address it gave was Moriarty Software Dept FO PO Box 261 Crawley, West Sussex RH117FJ, UK. I was just wondering if any of you could check this out for me and everyone else who would love a program that would give TT resolutions to any ST. it's priced at 20 pounds in there....Anyone know how much that'd be in US dollars. (God I hate america).

Atari Web Pages Latest News
~~~~~ ~~~ ~~~~~ ~~~~~~ ~~~~

Version 1.0
~~~~~~~ ~~~

Date 27/2/95
~~~~ ~~~~~~~

by

Mark Stephen Smith
~~~~ ~~~~~~~ ~~~~~

4th Update
~~~ ~~~~~~

================================================================================

Foreword
~~~~~~~~

Hello and welcome to the news item on the Atari Web pages. This document
will describe the Atari Web pages as provided by Mark Stephen Smith and will
inlcude a list of the latest updates for the month. Each month I hope to update
this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but
they are still at an early stage and developing all the time. As such any
feedback and support you may have for these pages is more than welcome, it is
infact encouraged. The more input I get from its users the better, as then I
will know what is good and bad about these pages and can change them
approproately in the hope of increasing their value to their readers.

Now on with the show.

================================================================================

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in
several projects, and submit work to several Internet and diskmag sources for
inclusion. I have also officially took over the maintenance of the Atari FTP
list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates
will be marked with a U. All new items are also listed below according to the
date they were added.
```

The new items this month are:

27/2/95 -- Towers II : Plight of the Stargazer Update!
27/2/95 -- Falcon Owners Group Magazine No.8.
23/2/95 -- Atari FTP List Update
22/2/95 -- HENSA Atari TOS Newsletter Volume 8. No.4
22/2/95 -- HENSA Atari Falcon Newsletter Volume 8. No.2
22/2/95 -- HENSA Atari MiNT Newsletter Volume 8. No.2
22/2/95 -- MIDI Grid Review by Andy Curtis
8/2/95 -- Utopus Two player shootem' up (STE) 231K
8/2/95 -- Downloadable files in Falcon/ST sections now have file sizes listed
7/2/95 -- Hyper Image pages link (contains Hover Hunter news)
7/2/95 -- Mail to me directly using this link
7/2/95 -- New inlined Atari logo for Web pages by Frank Charlton
7/2/95 -- AEO Newsletter Volume 4. Issue.2 in text and ZIP format
6/2/95 -- Pinball Dreams and Llama Zap Falcon News
6/2/95 -- News and Announcements section added
6/2/95 -- HENSA Atari TOS Newsletter Volume 8. No.3
2/2/95 -- Lynx FAQ updated
2/2/95 -- Jaquar FAQ updated
2/2/95 -- Connect Review by Frank Charlton
2/2/95 -- Zero 5 Review by Frank Charlton
1/2/95 -- Atari FTP List Update
31/1/95 -- AtariNOS FAQ
30/1/95 -- CAIN Newsletter Volume 2. No.1

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular

piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

Next month I will give full details on how to access the Web using the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

From your Web browser choose to open URL and enter the following address:

http://www.dl.ac.uk/MISC/ATARI/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

==========

U What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
**Hyper Image Pages. Contains Hover Hunter Jaguar news.

This section will have a page dedicated to it this month as over 30 new Atari related links are added.

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

U Atari FTP List by Mark Stephen Smith (essential for the latest news on who provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:
~~~~~

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about MiNTNet.
**AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters
~~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
U AEO Newsletter containing the latest Atari news.

Newsgroups
~~~~~~~~~~

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

****

Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****
~~~~~~~~~

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
**Connect review by Frank Charlton (ST Format)
**Zero 5 review by Frank Charlton (ST Format)
**MIDI Grid review by Andy Curtis (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself (finishing review of Apex Media for the Falcon). This section is now growing well.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

**News and Announcements Pages
~~~~ ~~~ ~~~~~~~~~~~~~ ~~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:

**Universal Virus Killer Book Announcement

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. Unfortunately the way the logs are now stored prevent me from calculating the number of accesses to these pages in the future.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.
~~~~~~~

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

**Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.
**Towers II : Plight of the Stargazer Update! The latest news on developments.
U Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to be done with updates here. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with more to come:

- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)
- Speed of Light v3.5 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
U FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned
Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are
small descriptions or full features with pictures. At the moment there is:

U Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major
revisions to be done with updates. All files now list there size so you can see
how large they are before downloading. At the moment the following software is
included, with lots more to come:

- Speed of Light v3.5 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

**Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB Awesome Golf Baseball Heroes
Batman Returns Basket Brawl Bill and Ted's
BlockOut BattleWheels Blue Lightning
California Games Checkered Flag Chip's Challenge
Crystal Mines II Dino Olympics Dirty Larry:Renegade Cop
Dracula the Undead Double Dragon Desert Strike
Electro Cop European Soccer Chal. Ultimate Chess Chal.
Gauntlet:3rd Encounter Gordo 106 Hard Driven'
Hockey Hydra Ishido : Way of Stones
Jimmy Conners' Tennis Joust Klax
Kungfood Lemmings Lynx Casino
Malibu Bikini Volleyball Ms.Pac-Man
NFL Football Ninja Gaiden
Ninja Gaiden III : The Ancient Shop of Doom

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

U Lynx FAQ
- Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently empty.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

- Jaguar CD Specifications
- Rebellion Development News
- Sinister Developments News
- Sensible Soccer News
- Coming Soon!
- Hand Made Software News

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing more to this section myself. Reviews so far include:

Aliens versus Predator Raiden Tempest 2000
Cybermorph
Aliens vs Predator Trevor McFur in Cresent Galaxy
Brutal Sports Football Dragon: The Bruce Lee Story
Wolfenstein 3D Checkered Flag

There are many more reviews to come.

Other Jaguar Stuff
~~~~~ ~~~~~~ ~~~~~

Miscellaneous information on the Jaguar. Information included presently is:

U Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ update for Jaguar

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson.

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Extra pictures will appear due to my recent access to a colour scanner, enabling me to scan the latest pictures before the exist elsewhere on the Internet. I also hope to slowly get all the maps for AvP into these pages somehow?

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it.

Expect more links to Atari related pages in the future, this section will be getting it's own dedicated page as over 30 new Atari related links are to be included this month. There will be more newsletters, documents, updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials. Also Claus J. Pedersen (Stello author), Bob Brodie (former Atari employee) and Steven Davies have all offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

832. Re: MiNT-X & the Fvwm window manager

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-27 14:29:38 UTC
From: Craig Graham <Craig.Graham@ncl.ac.uk>
Message-ID: <3isnki$ij6@whitbeck.ncl.ac.uk>
Source record: 27400

I've now solved my problem with Fvwm - it was a compiler bug in gcc2.3.1,
I re-compiled with 2.5.8 & now all is rosey in the garden. I'll be putting
a 68030 binary of Fvwm on phlem.ph.kcl.ac.uk later today (very stable).

Craig.

Well has anyone written a program that uses the menu, and form dialogues from Enhanced GEM?

I've been trying to understand the source code DIALDEMO and translated a bit of it, but it doesn't have that many comments for me to fully comprehend how it works!

Any source or help (or better still an readable manual 8)

Alex Nicholls

834. GCC filenames problem

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-27 14:37:08 UTC
From: Craig Graham <Craig.Graham@ncl.ac.uk>
Message-ID: <3iso2k$ioc@whitbeck.ncl.ac.uk>
Source record: 27402

For some reason, every time I compile something with GCC, it truncates the object filenames to lower case 8+3 filenames (this is on my minix partition BTW). This is a real bummer, as lots of the X stuff I've been compiling uses longer mixed case names, so I have to go through by hand & fix the names before I can get the stuff to link. Any suggestions? (used gcc2.3.1 & it did this, I now use 2.5.8 & it still does this).

Craig.

>Thanks for any help.

Ken,

You should be able to use any SCSI hard disk on the Mega STe. I
upgraded temporarily to a Maxtor MXT345SL. I plan to buy a Quantum
540 meg some day. I think you should be able to put at least a 1.2 GB
drive on the stock host adapter.

Yes, this has been the cause of nearly all of my problems setting up X
so far. I have looked all over the place and for the life of me I cannot
find a version of zoo which supports mixed case filenames. Every version I
get says that it is not supported. Yet, people are zoo'ing things with
mixed case filenames and expecting other people to unzoo them and have it
work which is not very likely. Does anyone know where I can get a version
of zoo which does support UNIXMODE? It is very frustrating being able to
see the mixed-case filenames in the zoo archive but having to rename all the
files appropriately after they have been extracted. I suppose it's better
than not seeing the correct case-sensitive filenames at all. :-)

I need some information about installing TOS1.4 in MegaST.

The MegaST I have has TOS1.2 in two roms and I have a six rom set of TOS1.4.

I have done the same thing before with a 520ST (replacing a two rom set
with a six rom set) and there were three solder jumpers on the motherboard
which I had to change. I couldn't find the same jumpers on the motherboard
of the Mega but I think there has to be someting I must change.

What I need to know is what else I have to do to the Mega besides
installing the roms to make my upgrade to work.

Thanks in advance!

I have a copy of "The Concise Atari ST 68000 Programmer's Reference" by Katherine Peel, which I've been using as my main reference for ST programming for the last 5 years or so... I think it's time I replaced it!

I've read comments here about "The Atari Compendium" being a good reference, and the review in ST Applications was good. I've also seen "Proflibuch" (sp?) and a couple of other books mentioned. What are your opinions on which is best? (I can only read English, btw).

The other question is, where can I get it? I've tried to get TAC from HiSoft, but it seems to be out of print. They say they're waiting to see if enough orders come in for it to be worth reprinting it...

Thanks for your help.

I advise:

1) Open it up and make sure all the chips are pushed into their sockets.

2) replace the PSU unit.

Point 2 isn't that had as the TT takes standard PC power connectors. You'll
not going to find a PSU that fits in the case (and anyway the original one
is only 65W), but I just mounted the new one behind. Cured all my problems
(mainly wavy text on the screen) and only cost 30ukp. I kept the original
fan in place so it runs super cool as well now.

I can go into more detail if you like - and of course 'your milage may
vary'. Main thing is to make very sure the replacement wiring is
electrically the same as the original. Pretty easy with a cheap multimeter.

Failing that - you'll need to get a repair shop to look at it.

:-(

Roland.

@CiX

BTW is there any general feeling about what is being ported to X-MiNT? I fancy doing versions of CBZONE and XLANDER (if I can fine the source), but won't bother if they are all in hand.

Also is the current X11R5 considered stable - or should I wait for the next release before downloading all the programming stuff?

Thanks.

> appreciated.

Well I don't see how running (even a dodgy) TOS 2 disk could cause hardware
damage.

Two things which spring to mind though:

Maybe you have a virus?

Maybe your disk is nearly full/fragmented (you have a hard disk?).

If the latter is the case then GEMDOS file activity will be less than
optimum as the heads keep having to move to find some spare space to write.

Roland.

Yes, I did indeed try this version. It says straight out in the readme.st
file that the binary distributed version does not fully support UNIXMODE,
and that mixed case filenames are not supported. It says to change a header
file and recompile, or send e-mail to the author if you are unable to
recompile zoo yourself. Incidentally, I would compile it since the source
is available but I don't have GCC set up right for MiNT yet and I probably
won't until I get my new hard drive and delve into getting GCC up and
running. So, as far as I can tell, the bmintzoo.tos is the same zoo
program I had before, but thanks for the suggestion. :)

Howdy, gang. I've pretty much finished a spiffy new MOD player. It runs as a PRG or ACC, has the _coolest_ 3D look interface, and (coolest of all) automatically scans any floppy you put in the drive and loads any .MODs it contains with no need for the user to even have the ACC open. Unfortuneately I have run into one /small/ problem.

I have _NO_ idea how to play a .MOD. Oops?

So, anyways, can anyone direct me to PD or at least cheap DSP .MODS playing source? Thanks.

Hmm...

I have the Atari Compendium, and although it is a very good book,
the upgrade price...well, let's put it this way, it is cheaper for me
to buy a new edition of the Atari Compendium from my dealer than to
actually upgrade via SDS Publishing, and tear off the cover
(necessary to upgrade). However, it is a good book, and includes
some decent code and information, although were you able to read
german, I would recommend the Proflibuch as it is, far and away, a
better book for programming. Anyway, if you decide to get the
Compendium, get the disk with the source on it as well. To
summarise, the two books to get for general programming are the
Proflibuch (if you know german) and the Compendium.

This is probably an easy one for someone out there. I've got a brand new CTX 14 inch SVGA monitor, and I've hooked it up to my Falcon with a SVGA adaptor from Ladbroke Computing. When I turn everything on, the display is wrapped across the monitor screen twice. The Falcon is obviously sending the signal at half the speed it should. Has anyone got any clues? Can I fix it with a software driver, or have I got to send my Falcon back to Atari for the third time (and wait another six weeks on top of the twelve weeks it's already been at Atari in Holland being repaired)?

It's no possible : I haven't see articles about hp calc owners on atari.

Please it's not necessary to hide .

859. Dead Atari SM124 monitor; need help fixing it...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-28 10:15:35 UTC
From: mattk@netcom.com
Message-ID: <mattkD4pGHz.Msv@netcom.com>
Source record: 27425

Hello all...

I have a dead SM124 monitor (monochrome). It's a Goldstar internally. I got a file written by Randy Constan detailing how to fix a common problem that kills these monitors. The fix involves a capacitor that fails, taking out a resistor, and sometimes one or both of the fuses. The capacitor is a 2.2uF 50V non-polar electrolytic. Randy says to substitute a 2uF 200V metal film made up from two metal film 1uF 200v in parallel. The resistor was lost, but the text file says to use a 1/2 watt 680ohm (R721) and I recollect (though am not sure) that's the right one. I did the recommended fix and still have no video.

One thing was the "faulty" capacitor tested as functional using a resistance meter. The resistor was definitely fried...as was the main board under and around the resistor.

Here's what I've done since: I noticed the cathode filament in the CRT does not glow at all, which it seems should glow quite a bit. I measured the voltage across the filament; it was around 5VDC. We checked the filament for continuity--it measured around 50ohms. The voltage seems low. I checked the voltages of the wires leaving the power board to the main. On my little Radio Shack autoranger, all I got was overranging while measuring DC, and on the AC scale, it gave jumpy voltage readings. On a "manual" analog meter, the connection gave about 24VDC and around 50VAC over the very same pins. This was what we checked. Mind you, I have no idea what any of these are supposed to read.

Massive and profuse thanks for any help anyone can offer.

Bye for now,
Matt

INCLUDED FILE: dead_mon.txt

If you have an ATARI SM124 Mono monitor that has recently gone belly up, read on. In particular, this pertains to those of you who have tweaked the coils and trim pots in your monitor to get a full raster display, although it's quite possible that unmodified monitors have been affected as well. Also, if do have a modified monitor that's behaving fine, you still may want to consider the suggestions described in this article, as it could save you a surprise monitor failure that (you _KNOW_) will definitely happen at the worst possible time.

Finally, this text describes a problem particular to the monitor manufactured by "Gold Star Co", which has the Brightness, Contrast, and Off/On Volume controls recessed on the right side-

panel. There may have been other manufacturers of SM-124's with completely different electronics, so if ANY of the physical component layout descriptions written here do not seem to jive, then all bets are off and the information given here may or may not have any practical value. In addition, the monitor 'fix' I'm going to describe should only be done by a trained electronic technician, or at the very least a knowledgable electronics hacker with good soldering AND de-soldering skills!

Disclaimer: You can easily get knocked squarely on your butt by the voltages present in your monitor. Weather or not it kills you probably depends on just what you fall on, your present health, and where the resulting flying monitor lands. In any case, your decision to implement the changes described herein is completely your own. I disclaim all responsibility for your health, safety, or any damage to equipment or property caused by fires, implosions or explosions, earthquakes, global flooding, or galactic imbalance resulting from your use of any information in this writing. I think that about covers it ;)

So... once upon a time, we all got our nifty HI-RES mono monitors, powered them up, and the very first thing we all said was, "Ah.. MAN!!... This monitor is screwed up". Perhaps stronger language was used, but the fact was that we all thought something had to be wrong. Alas though, the tiny picture on that screen was exactly what the ATARI mystics had intended! Of course, it wasn't long before many daring hackers boldly removed the monitor's covers, cast their warrantees aside, and discovered a way to expand the tiny picture to full size. The information spread quickly through the worldwide internets, spider-nets, and fish nets, and soon all mere mortals had full screen displays and could actually read that 6 X 6 font! And so, the all lived happily ever after. But then one day years later, a curse fell upon the land, and darkness fell upon the faces of many of these monitors.

Ok, enough with the story narrative. By now, you're beginning to get the picture (no pun intended). The modification to fill the screen does indeed place an additional stress on a portion of the monitors circuitry, which coupled with a design error quite common to many types of computer monitors, ultimately caused the failure. The good news is that I've now seen quite a few monitors with this identical failure which is 100% repairable, and should leave you with 'good as new' results. The bad news is that you do need some technical skills, but even if you don't, finding a techie friend to help will be abundantly easier having a possible procedure for repair.

page 1

Brief technical summary. Right near the coil you adjusted to spread the horizontal width of your display, there's a 2.2 uF

capacitor. More specifically, it is a non-polarized electrolytic capacitor, which is actually 2 polarized capacitors wired 'back to back' in a single enclosure. As the screen is widened, the peak voltage level across this part increases, thereby causing more internal stress. This situation is further aggravated by the type of part as well. All capacitor types have certain advantages and disadvantages and when it comes to electrolytic types, the advantage is smaller size. It's disadvantage however is that at higher frequencies, it has high 'leakage' current and acts more like a resistor. The Horizontal frequency passing through this capacitor is in fact quite high, and the resistive qualities at these frequencies cause the capacitors to generate significant heat. Over time, that heat will cause the part to fail even in un-modified monitors, but the modification certainly speeds up the process.

If your monitor has fallen victim to this failure, in a way your lucky. There's a fair chance that the problem (as said earlier) would happen one way or another anyway, and at least now you have a possible fix. First, you need to disconnect the monitor and open it up. If you have the chassis I'm describing there will be two screws on the upper sides, visable from the back; two more screws on the bottom; and a single screw on the back above the power plug, which is a removable 'spade' type AC connector. After removing the screws, you can remove the back cover, but be sure to be careful of the speaker connections. The speaker is mounted to the inside of the cover, and connects to the monitor's main PC board via a small removable plug. It's a bit tough to get to, but trust me, it IS removable.

Once the cover is free, there are 2 fuses to check first. From now on, all references to right and left will assume you are behind the monitor, with the screen pointing away from you. There is a small PC board mounted vertically on the right side of the chassis which contains a 0.75 amp fuse. There's also a 2 amp fuse immediately to the right of the speaker plug you removed on the main board. Check both fuses with a DVM or other suitable instrument. Most likely, you'll find that it's the 2 amp on that is gone, but either one blown is possible. You can buy these tiny fuses at Radio Shack, and while your there, you can pick up a much more modern replacement for the capacitor we mentioned earlier. There's also a resistor that often cooks when this failure occurs, so you might as well get all this stuff at once. If the problem turns out to be something else, at least you'll be prepared for the eventuality. In any case, read on to do a 'walk through' before buying, to make absolutely sure your chassis physically matches the one we're discussing.

At your local Radio Shack, pick up the following items:

fuse (pkg of 4) 3/4 amp 270-1048
fuse (pkg of 4) 2.0 amp 270-1052
fuse (pkg of 4) 5.0 amp* 270-1056
capacitor buy 2! 1 uF, 200v metal 272-1055
resistor (pkg of 2) 680 ohm, 1/2 watt 271-021

* optional purchase, see text.

page 2

Since we have plenty of extra fuses now, start by just changing them, and setting up the monitor (still uncovered) with your ST. If the display comes up normally, leave everything powered up and wait a few hours. If all goes well, you can either make the fix were going to describe anyway to save future grief, or put the other parts away, along with this text, in case the problem returns.

Assuming the problem did not go away (no display and/or fuse blown again), there are two paths you can take from here. You _can_ just go ahead and change the suspected components without really knowing if they are at fault, since they'll probably need replacement eventually anyhow. The other possibility is that you don't want to to this until you're a bit more sure it's necessary. If that's the case, read the next few paragraphs. Otherwise, just skip over to "Making the Repair".

If you do want to do some checking, here is a possible (but not foolproof) procedure to see if the suspected capacitor is indeed the culprit. If the 0.75 amp fuse on the vertical board was blown, temporarily replace it with a 2 amp. If the 2 amp fuse on the main board has blown, temporarily replace it with one of the 5 amp fuses. Set up the monitor, still open, near your ATARI, and connect the monitor cable to your machine. Boot the ATARI with the monitor still off. We want to keep our 'powered up' time with the larger (wrong) fuses to a minimum. Now, hook up the power cord and turn on the monitor, being ready to instantly kill power at the first sign of any unsafe condition such as smoke or electrical arcing.

With the higher current fuses installed, the display will probably still be out, but the green pilot light on the front panel _should_ light. If it doesn't, then either the new fuses have blown, or a problem exists somewhere else in the circuit. Of course, the pilot light could just be shot, but if the higher current fuses do actually blow, then forget about the remainder of this discussion and just try implementing the suggested repair. Also, if the screen display _does_ appear with the larger fuses, don't be to happy yet! Twice now I've seen the 'crippled' capacitor seem to work fine for awhile before the final breakdown. So weather the screen display comes up or not, proceed to the next step as long as the fuses are not blowing.

Locate Capacitor C714. It will be the round cylinder on the left side of the main board (from the back), in-between the coil you adjusted when you increased the width and the flyback transformer. The coil is the only adjustable coil on the board, so you can't miss it, and hopefully you know that the flyback transformer is the thing-y with the wire that goes into the top of the picture tube! Locate the capacitor... but don't touch it yet! The flyback puts out thousands of volts, and if there is a flaw in it's insulation, it could arc right into you hand. Just leave the unit powered up for a few minutes, and then turn it off. Now, with your finger, move close to, and finally touch the capacitor from the top. What you're looking for is a _HOT_ part, so be careful! If in fact the part is really hot, it probably has shorted and needs to be replaced.

Also, immediately to the right of the coil, also on the main board is a diode (D-709) and a resistor (R-221). Take a good look at the resistor to see if it looks stressed or burnt. If you want, you can do an in-circuit check with a DVM to see if it has opened. You can make this measurement from the bottom of the board if you want since it's pretty cramped on top. Even if it has not died, you should consider replacement if it appears stressed, or the underside of the board appears burned and discolored at the location of the resistor.

Making the Repair

Making the repair is simply a matter of changing the parts, BUT... there's some special considerations here. You may or may not be aware that radio shack does have 2.2uF, 50 volt non-polarized electrolytic capacitor in stock! But using that part would be dumb since the conditions that caused it to die in the first place have not changed AND, the part was a poor design choice to begin with! We're going to use the two 1.0 uF metalized film capacitors which are NOT electrolytic, AND have a working voltage 4 times that of the original part! We will have to parallel both capacitors to get 2.0uF, which is reasonably close to 2.2 and in fact works just fine. First though, you'll have to de-solder the existing C-714, which will probably be a bit of a chore. Do that, and also get rid of the existing R-221 if it shows the signs of heat stress (or is open) as we discussed earlier. You can just cut it out if you want, since we'll be soldering the new parts to the underside of the board.

Now, take the two 1.0uF capacitors, and solder them together in a neat parallel arrangement, that has a pair of leads bent to accommodate the spacing of the leads on the original capacitor. Look at the underside of the board and observe the original C-714 solder pads, as well as the clearance to the bottom when the cover is replaced. Give it a little thought and come up with a mechanically sound and visually sensible combination. The

capacitors again, are not polarized so direction does not matter. And remember... parallel, NOT series!!! Solder the parallel combination to the C-714 pads under the board. Try to push the leads right into the holes left by the removal of the old capacitor.

page 4

R-221 should also be replaced from the bottom side of the board unless you're really patient, and have some small tools. It's much easier to just trim the leads and tack solder it in place under the board. If the board looks a bit burned in this area, you may want to clean it up a bit prior to installing the new resistor.

Finally, don't forget to put the proper fuse values back into BOTH locations. The original fuse values are important protection and do not normally blow unless there is a real problem. I definitely do not recommend leaving the larger fuses values in place. Do a bench check on the ST again, still with the cover off. You may need to re-adjust the horizontal width, or the position tabs on the neck of the picture tube to center and set up the display. Once this is done, you can put the cover back on, and you're back in business. If the fix does NOT help, just double check your soldering and connections to make sure you didn't wire something wrong.

Hope this fix was helpful. If so, I'd like you to drop me an EMAIL, since I'm curious as to just how many fried monitors out there had this problem. Also, if you're not able to make the repairs yourself and live anywhere in Islip, Long Island, NY area, send me E.Mail and maybe I can help you out. My GE mail address is R.CONSTAN, or Internet: rconstan@maestro.com.

-Randy Constan, Elfin Magic Co.

> Multi-Tos.

From a textfile I got:

Drag and Drop protocol, revision 1.1

Here is a protocol applications can use to communicate "drag & drop"
operations, i.e. to allow
the user to drag an object from an application's window to the window of a
diffe rent
application. This is somewhat likecutting and pasting to/from the
clipboard, but without the
necessity for explicit cut and paste operations. Moreover, this protocol
ensures that the data is
actually transferred to the correct process (whereas clipboard data is
globally shared, and can be
modified or deleted by any process).

In the following, the "originator" is the application that owns the window
the o bject was
originally located in, and the "recipient" is the application that owns the
wind ow into which the
object is dropped. It is assumed that these are two *different*
applications.

Originator's side

When the user drags and releases an object, the application should make the
appr opriate
wind_get() call to find out the window id and window owner of the window
under t he mouse at
the time the button was released. If the window owner is not the current
applica tion, then the
current application becomes the originator of a drag & drop sequence.

The originator of the drag & drop creates a (bidirectional) pipe named
DRAGDROP. xx, where
'xx' is some unique 2 character combination (this could be formed from the
proce ss id, or the
application could just try Fcreate() until it finds a combination that

works; Fc reate will fail if a
pipe with the same name already exists). 2 letters allows for 626
simultaneous d rag and drop
operations to be in progress at once, which should be plenty.

It then constructs and sends an AES message to the window owner, as follows:

word 0: AP_DRAGDROP
word 1: originator's application id
word 2: 0 (number of extra bytes in message)
word 3: id of the window that was dropped onto
word 4: mouse X position at the time of the drop
word 5: mouse Y position at the time of the drop
word 6: keyboard shift key status at the time of the drop
word 7: 2 byte pipe identifier (see above)

If word 3 is -1, then there is no specific window which is the target of
the dra g and drop
message. Usually this will be used with "ARGS" data to indicate that a new
windo w should be
opened for the indicated file(s).

The originator then waits (with Fselect) for data to arrive on the pipe. If
the Fselect times out
(probably a 3 or 4 second time out would be sufficient) then the recipient
doesn 't understand
drag & drop. Otherwise, the sender reads 1 byte from the pipe, which will
be one of the
following values:

DD_OK meaning "go ahead, send data"
DD_NAK meaning "I don't want any data on that window"

If DD_OK is received, the originator should then read 32 bytes from the
pipe. Th ese 32 bytes
consist of 8 data types, each 4 bytes long, which are a list of the data
types t hat the receiving
application can understand, in order of preference. This list is not
binding, no r is it exhaustive; it
is intended only as a guideline. The originator should not abort the
transfer if it can't send any
of the types on the list; it should go throught the normal exchange with
any typ es that it can
send, and leave it up to the recipient to abort if necessary. If the
recipient h as fewer than 8
"preferred" data types, it will pad the 32 bytes with zeros .

Data types are always 4 bytes long, and consist either of a period followed
by a 3 byte file
extension, or a 4 byte "special" type. Extensions are the same as the file
name extensions used
for normal files or scrap files; for example, ".TXT" would be an ASCII text

file with lines
terminated by cr/lf sequences. "Special" types are other kind of data. For
examp le, the data type
"ARGS" denotes a command line with arguments seaparated by spaces. The
desktop s ends a
drag & drop message with type "ARGS" when you drag a group of files or
folders t o an
application window; the file and folder names, separated by spaces, form
the dat a for this
message. Note that if any of the file names in the command lines contains a
spac e, then it will be
surrounded by single quotes. Inside of single quotes, two consecutive
single quo tes stand for a
single quote. For example, if a file named Eric's File would be passed to
an app lication as 'Eric''s
File'. This obviously is of concern only for non-DOS file systems, but
applicati ons should be
aware of this.

The data type "PATH" is a request by the originator for the GEMDOS path or
file name
associated with the target window, and is handled specially. See below for
compl ete details.

After the originator has consulted the recipient's list of preferred data
types, it then constructs a
header consisting of: (the length of each field is given in parentheses
after it s description)

(1) The type of data (e.g. ".TXT" or ".IMG") as a 4 byte file extension.
Some sp ecial types are
reserved: "ARGS" means that the data is a command line with arguments
separated by spaces.
For example, if you drag a group of icons from the desktop to a window, the
rece iving
application will get a drag & drop message with type "ARGS" containing the
file names of all
files dragged and dropped. Application data types must begin with a "." and
shou ld form a valid
file extension (similar to the extensions used for data exchange on the
clipboar d). (4 bytes)

(2) The length of the data in bytes. (4 bytes)

(3) The data's name. This is arbitrary (and can be empty); typically this
would be a brief
description of the type of data and the application that created it (e.g.
"TOSWI N text"). Typically
this field will be used to label an icon. (variable length, terminated by 0)

(4) A file name associated with the data. This may be related to (3),
obviously, but need not be.

It should be just the root of the name, and should not include any path or drive letter. Example:
"TOSWIN.TXT". (variable length, terminated by 0).

There may be extra bytes in the header following the file name; for now applicat ions should
ignore any such following data, but in the future we could add new header fields .

The originator writes to the pipe 2 bytes representing the length of the header, and then writes
the header itself. It then reads a 1 byte reply. This reply can be any one of th e following:

DD_OK: go ahead, send the actual data to the pipe
DD_NAK: abort the drag & drop
DD_EXT: I don't understand the file type, try something else
DD_LEN: I don't want so much data all at once
DD_TRASH: the data was dropped on a trash can
DD_PRINTER: the data was dropped on a printer icon
DD_CLIPBOARD: the data was dropped on a clipboard icon

all other values: reserved for future use

If DD_TRASH, DD_PRINTER, or DD_CLIPBOARD is returned, the originating applicatio n should
terminate the drag and drop exchange by Fclosing the pipe, and should take whate ver action it
considers appropriate (e.g. printing the data).

If the reply is DD_EXT, the drag & drop originator either builds another header with a different
data type, or closes the pipe (causing the recipient to get EOF on the pipe) to abort. Either the
originator and recipient eventually agree on a data type, or else one or the oth er aborts the
transfer.

If and when DD_OK is received, the originator writes its data to the pipe. It mu st be sure to
write the number of bytes it specified. It then closes the pipe with Fclose(). E xception: if the
agreed upon data type is "PATH", then the originator *reads* the specified numbe r of bytes from
the pipe.

The "PATH" data type is a way for applications to request a file or path name fr om recipients. If
the recipient agrees to "accept" a PATH data type, then it will in fact write th e path name
(terminated by a \) or the full file name of the file associated with the target window. If no file
name or path name is logically associated with the window, then the

recipient mu st not accept
the PATH data type for that window.

Recipient's Side

When an application receives an AP_DRAGDROP message, it should immediately
open the pipe
U:\PIPE\DRAGDROP.xx, where 'xx' is the 2 character identifier in the last
word o f the message.
It then does the following:

(1) Write a 1 byte DD_OK message to the pipe.

(2) Write a 32 byte list of 8 preferred data types (see above). This list
can be used by the
originator as a guideline, but is not binding. The list should be padded
with 0 bytes; in the
extreme case (if the application has no preferences) it may be entirely
zeros.

(3) Read a 2 byte message header length (n) from the pipe.

(4) Read n bytes from the pipe. This header is described above, and
contains the data type, data
size, and a user defined name for the data (the name may be empty).

(5) Check the data type. If the data type is NOT one that the application
can un derstand, it
should write a 1 byte DD_EXT message to the pipe and wait for another
header, i. e. go back to
step (3).

(6) Check the data size. If the recipient can't handle so much data, it
should w rite a 1 byte
DD_LEN message to the pipe and go back to step (2).

(7) Write a 1 byte DD_OK message to the pipe to tell the originator to
start sen ding data.

(8) Read S bytes from the pipe, where S is the size of the data as
specified in the message
header. EXCEPTION: if the data type is "PATH" and the recipient wishes to
respon d, it should
actually *write* S (or fewer) bytes to the pipe. Those bytes should specify
the full GEMDOS path
name associated with the window (terminated by a backslash, \) or the full
GEMDO S path+file
name associated with the window.

(9) Fclose the pipe.

When both originator and recipient have closed the pipe, it will
automatically b e deleted by the
kernel (this is MiNT's normal action for pipes).

The recipient must always check each read for an error condition or end of file; if either of these
is detected, the originator of the drag and drop has aborted the transaction. If the recipient
wishes to abort the transaction, it should send DD_NAK as a reply in place of DD _OK.

Caveats

Applications involved in a drag and drop exchange should take care to avoid dead locks or fatal
signals. To this end, the following actions are recommended:

(1) The drag & drop pipe should be created with the "hidden" bit set. This cause s reads to return
end of file when the other end of the pipe is closed.

(2) The applications should ignore the SIGPIPE signal (number 13) during the exc hange.
SIGPIPE is generated when an application writes to a pipe with no readers, and t he default
action for this signal is to terminate the application.

(3) Neither application should do a wind_update() call during the exchange.

You need a generalised regular expression parser. Such a thing exists in the source for the GNU C library -- ftp the source from prep.ai.mit.edu. A regular expression is what you call the search criteria: thus * matches everything, *.* matches everything with a dot in it, fred* matches anything starting with the letters "fred" etc. etc.

Alternatively, read Robert Sedgewick's "Algorithms" book. It explains how to write regular expression parsers in Chapter 20 (under "pattern matching"). There are various versions of Sedgewick's book in Pascal, C and C++.

Checking my manual yesterday, I had seem that there is apin for the Mega2ST for composite. It was in the pinouts of the manual. I gotta create a cable to connect to an old RGB monitor... Got the pinouts for both the monitor and Atari. But the monitor doesn't support sound through that port, so I don'tv know what I am going to need to do to get that to work, probably send that pin to a separate Composite sound port, should work, but can't find either connector at Radio Snack.

So yes, the Mega2ST I got supports a composite signal, though which pin it is, I will need to confirm. I could post the pinouts tomorrow for the Port...

>Yes, I did indeed try this version. It says straight out in the readme.st
>file that the binary distributed version does not fully support UNIXMODE,
>and that mixed case filenames are not supported. [...]

But check down at the bottom of the readme:

| The version in this archive was compiled with gcc2.3.3 and the MiNTLIBs
|PL30 with -mbaserel and -mpcrel. It knows about long and case-sensitive
|filenames. [...]

You'll have to unpack to a Minix partition (does anyone out there
actually use full-blown UNIXMODE on a TOS FS?), but it does work. Trust
me, this is the version I use all the time.

From: rmccall@mcs.dundee.ac.uk
Message-ID: <3ivf3b$m1i@dux.dundee.ac.uk>
Source record: 27436

Would it not be possible to connect 32bit ram directly via the internal
expansion (CPU) bus? Hence avoiding the need to buy another CPU.

I'm not aware of anyone doing those particular programs. I doesn't mean they aren't though (I'm not, but thats just me).

Cards on the table - my current 'get it working' on MiNT-X is the Xmh mail tool. Running into memory usage problems (Xmh is only a small source tree, but is links in most of the X libraries (Xaw, Xt, Xext, Xmu), so the executable is massive. Currently it gets as far as openning a window and putting in a few buttons before crashing with an 'Error: cann't realloc.' message :(. I wish someone (ie. not me) would code VM into the MiNT kernal - couldn't the Linux VM code be poached & slotted in ? (question to any real kernal guru's out there)

>Also is the current X11R5 considered stable - or should I wait for the next
>release before downloading all the programming stuff?

I think it's very stable once it's set up right, and porting stuff is fairly easy. You do have to use fixstk on some executables to stop them crashing unpredictably, but apart from that, there are no real problems. The headers that come with the MiNT-X libs are incomplete so you will want to find a full X11R5 distribution to poach the /usr/include/X11 headers from.

But it's fun, so I recomend it......

Craig.

The cartridge port is mapped into memory at addresses $FFFA0000-FFFAFFFF and addresses $FFFB0000-$FFFBFFFF on the ST, and perhaps also (i.e. I can't remember) at $00FAxxxx/$00FBxxxx on the TT and Falcon which really do use all 32 address bits. There are 2 signals on the cart port - ROM3CS and ROM4CS which indicate that an access to the '$FA' or '$FB' page is in progress. There is NO A0 line on the cart. port as the 68000 doesn't have an A0 line, but the 68020 and above do. Instead the 68000 uses 2 lines - UDS Upper Data Strobe and LDS Lower Data Strobe to select one half of the bus during byte reads. _IF_ I remember correctly this works as follows:

UDS LDS ADDR Byte/Word Data-Lines used
0 0 xxx0 Word d0-d15
0 1 xxx0 Byte d8-d15
1 0 xxx1 Byte d0-d7
1 1 - - -

Because the cart port (and the 68000) have 16 data lines, it is not trivial to read data from byte wide devices, unless they are mapped to either all odd or all even addresses e.g. xxx1,xxx3,xxx5 or xxx0,xxx2,xxx4 etc. If you want an 8-bit device to use both odd and even addresses, you must connect it's data lines to both d0-d7 and d8-d15 via buffers so that the data lines are not permantly shorted together as this will probably kill the CPU (if I remember correctly, the cart port is directly connected to the CPU).

If you want to access 16 bit devices, just connect one to d0-d7 and the other to d8-d15 and use UDS and LDS to enable the appropriate device.

As a lot of people have said, you can't directly _write_ to the cart port. Infact any attempt to write to it causes a bus-error on the ST. The trick is to do a dummy read:

To send the word in reg d0 to the cart-port page $FAxxxx you would do the following:

```
lea $fa0000,a0
move.b 0(a0,d0.L),d0
```

This _reads_ the byte from $FA0000+d0 into reg d0 and in the process the original data from reg d0 appears on the cart port ADDRESS lines A1-A15 and UDS (as A0). Alternatively if you don't want to use UDS:

```
lea $fa0000,a0
add.l d0,d0
move.b 0(a0,d0.L),d0
```

or

```
lea $fffa0000,a0
move.b 0(a0,d0.l*2),d0 if you have a 68020 or above
```

will do the same thing, but the data will appear on A1-A15 with A1 being the LSB.

I hope that this is of use, I think it is correct, but I can't be sure!
Therefore use this info at your own risk, I take no responsibility for it. etc.....

P.S. If you have access to a VME equipped Atari - use that port instead, it is _much_ nicer and the connectors don't wobble!

Cheers,
Joe.

870. Replacementfloppy drive question

Greetings all,

I am looking for some advice as to a replacement disk drive for a friend
of mine's atari TT. It's a single density double sided thing, and I
presume I can replace it with a standard PC dsdd drive, but I just
want to be sure. Could someone please advise me on the exact type of
drive I should use? I am also interested in finding out if I can simply
plug in a dshd drive (I don't need to be able to read HD disks, but
dd drives are a bit difficult to come by. . .)

Please mail any replies to my account, as I do not frequent this group.
Thanks in advance for any help, Derrick

875. HELP! Drivers needed for Megafile 30.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-02-28 23:48:24 UTC
From: ac_green@postoffice.utas.edu.au
Message-ID: <ac_green-010395104626@mg4_84.its.utas.edu.au>
Source record: 27365

I'm making a request on behalf of someone that rung the local User's Group president. The person in question managed to crash his Atari Megafile 30 harddrive (no physical damage) and does not have the original utility disk that came with it (bought second hand I think). What he would like to know is what utilities can he use to reformat and boot from the drive? He tried the AHDI drivers and said they would work (I don't know whether he performed the installation properly as I wasn't there.) Will the ICD Pro utilities do the job as they are supposed to be adaptor independent in there best form? Are there any shareware or PD drivers he could use failing this?

Thanks guys please reply by e-mail as he local server only hold onto mail for two or so days and I might miss a posted response.

Don't know if you are on the MiNT mailing list - but this was a hot topic
a week or so ago. No really good answers though. Its a dificult problem
:-(

> > Also is the current X11R5 considered stable - or should I wait for

Well I seem to have it pretty stable now. Its easy enough to crash though
- but I'll soon learn what *not* to do! ;-)

> problems. The headers that come with the MiNT-X libs are incomplete
> so you will want to find a full X11R5 distribution to poach the

Hmn. Shouldn't be too much of a problem. I have X11R6 on my PC - and I
should be able to find the X11R5 around as well. Thinking about it I have
access to a DECstation which is apparently running X11R5 anyway...

> But it's fun, so I recomend it......

Thanks.

Well, I go bored waiting for someone to compile fvwm so I had a go myself.
I compiled fvwm, FvwmWindowList, FvwmClean and one other module and then
gave up on the rest (gcc kept getting upset on the next few I tried).

I have uploaded it to phlem.ph.kcl.ac.uk anyway and it will hopefully
persuade someone to upload a more complete version. Until then it is
probably good enough. You need the source code distribution for docs
and config files etc.

880. Falcon Audio Modifications

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-01 09:40:00 UTC
From: "Sven Bornemark"
Message-ID: <ftn_2.200.136.56$fidonet.org_2f544210_Sven.Bornemark@p56.dada.ct.se>
Source record: 27343

A while ago I described the modifications made to my Falcon.
Since it now sounds so good, I would like to share the complete
modification procedure, so that fellow falconeers can enjoy the
same *high quality sound* from their F030s.

Warning! This sort of work should definitely be carried out by
a qualified technician, since it includes replacing of teeny-
weeny components. Besides, it could affect the warranty as well.

FALCON HARDWARE MODIFICATIONS
as described on p. App 1-24 in the Cubase Audio Falcon manual

(Quote)

*To remove the bass boost on the output:
? Change C58 and C59 from 100PF to 1000PF.
? Change R123 anr R130 from 10K to 15K.
? Change R59 and R68 from 100K to 4.7K.
? Change C95 and C90 from 0.033yF to 1K Resistor.

*To reduce the speaker amplifier gain:
? Add a 100K resistor between pin 2 of U21 (@R119) and
AGND (@R111).

*To reduce the Input Gain by 6dB:
? Remove R56, R57, R90, R92, C21 and C81.
? Change R66 and R87 from 100K to 47K. (+) See note below!
? Add a 470pF NPO +/- 5% in parallel with R67.
? Add a 470pF NPO +/- 5% in parallel with R88.
? Add a 100pF NPO +/- 5% in parallel with R66.
? Add a 100pF NPO +/- 5% in parallel with R87.

(End of quote)

(+) [This is where Sven Bornemarks mod differs: this line
should read: *Change R66 and R87 from 100K to 1.8K.*
By doing so you end up with a sensivity of approx.
-10dB, same as most domestic HiFi gear]

I've also had the Clock Buffer Modification carried out on my
computer, but I'm unable to say for sure if this mod has had any
significant effect. All works fine, however.

Thanks to all Falcon owners out there who showed interest in
learning more about these sonic improvements on our beloved
Falcons!

Yours sincerely

I once found a drive that could not format 10 sector disk, this was caused
by some one adjusting the index timing, after reseting this all was OK, it even
formated 11 sectors...

Null Modem cross over cable, async only...

2 to 3
3 to 2
4 & 5 to 8
6 to 20
7 to 7
8 to 4 & 5
20 to 6

This should work....

Erm, I _had_ the upper/lower case problem with the version of zoo from the
MiNT distrubution kit and upgraded to the above program to find that it did
indead work correctly. Dunno about UNIXMODE or that but I does work! :)

I heard that GEM does not use the Blitter. Is this true?

If this is the case, then would it not be possible to write code
to speed up GEM using the Blitter?

>>>[..]

Ok, last night I got this version and tried it and you are right, it does indeeed work. :) What happened before was I got the bmintzoo.zoo file (which I assumed to be the same thing as bmintzoo.tos.gz, just in a different compression format -- silly me!) which doesn't have the extra comments at the bottom of the readme. I don't understand why anyone would even want the non-unixmode version because if you have a Minix filesystem, you want the case sensitivity, and if you don't have MinixFS, it still works anyway.

Well, enough of that, I now have working tar and zoo and I can say goodbye to the extraction problems for good. :) Thanks everyone!

889. Xerox 4045 Laser CP - Printer problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-01 19:11:21 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <3j2gsp$qdi@golem.wcc.govt.nz>
Source record: 27351

I just got myself a Xerox 4045 Laser Printer and Photocopier, for a measly ~$150US. It will copy okay, and accepts text from the Atari without any problems whatsoever, but.....

The electrostatic drum, on the left hand side, is coated with toner, and whenever I print anything, the left hand side of the page is a black blur. Is there some way I can fix this, or does the drum have to be replaced? (I forsee hideous expense!)

Also, I can't get it to print any Graphics from the ST, and the manual isn't terribly helpful as far as telling me what printers it is compatible with. It is obviously graphics capable judging that it will photocopy stuff, and the manual _says_ it can handle graphics, but is there anyway I can get this thing to handle graphics? (Printer driver etc.!?)

If I can get this thing working, then it's a pretty cheap printer, and photocopier :) (Heck, a Dot-matrix would have cost me more than this!)

Any ideas on drivers and/or fixing the toner-sticking-to-the-drum problem!?

890. How to get make working properly

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-01 19:42:53 UTC
From: bgilbert@natinst.com
Message-ID: <3j2int$k6f@falcon.natinst.com>
Source record: 27375

I have been getting a lot of nice packages for Mint-Net and
GNU stuff lately, and a common feature seems to be they all come
with a makefile which will install the programs on your system for
you if you just type "make install" in the directory you unpacked
it in. However, I can't seem to get this property to work on my
Falcon. For one thing, often the makefile needs a program called
"install" and I don't seem to have this anywhere on my system.

The other problem may be that I just don't have GCC set up right.
Can someone with GCC running on their TT/Falcon tell me what variables
I have to set or what libraries I need to get this working properly?
I would think that if I am just doing a "make install" I probably
don't really need to compile anything, but a lot of the packages I have
gotten do look like they are trying to compile something. I do have
the newest version of GCC on my machine as well as GNU make 3.63 and
the MiNT libraries/includes, can someone tell me what else I may be
missing? I seem to remember a couple years ago there was a very helpful
document on exactly how to set up GCC, perhaps this is still on the net
somewhere?

Thanks in advance,

>It does indeed, but there's only the one 50 way port on the
>board, there's no second port. So when I have the second 50 way
>ribbon, where do I shove it? :) You don't mean in the same one
>that is already used do you?

Yes he does. SCSI can have up to 8 devices on the same bus, so all you
need to do is add another connector on the same 50-way ribbon cable.
You'll also need to set the mechanisms to different ID numbers, this
is usually done by a set of 3 jumpers on the drive.

You are supposed to also remove the termination resistor networks
on all the drives on the bus except the one on the end of the cable.
This is not always necessary though. Try leaving them on at first,
and see if things are working anyway. (I didn't need to do this on
my setup of ICD AdSCSI + 2 drives.)

One last thing to check is that you're power supply can handle both drives
at once. I managed to fry 2 host adaptors in a row when my PSU flipped out,
after overtaxing it.

Disclaimer: This all works fine on my ICD adaptor. Your Mileage May Vary.

Bad ASCII art:

```
This drive should have terminating resistors --------------+
This drive should not have resistors -+ |
__________ | |
| | V V
| :-------------------::-----------------::
---------: host : :: ::
DMA bus : adaptor : 50-way SCSI :: 50-way ::
---------: : cable :: cable ::
| :-------------------::-----------------::
|__________| 1st 50-way 2nd 50-way
connector connector
```

Good luck!

It does use the blitter (unless you disable it - e.g. from the desktop options menu).

: If this is the case, then would it not be possible to write code
: to speed up GEM using the Blitter?

Although is uses the blitter, it is still possible to speed up VDI and hence GEM. You could write your own code, but it has already been done in NVDI and something else whose name I can't remember at the moment.

Well if GEM didn't use the blitter - then yes - but as GEM *does* use the blitter (at least from TOS 1.02 (and excluding TOS 3.0X)) then its already been done.

What did you think *did* use the Blitter if GEM didn't?

:-)

900. HDX and an SH204

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-02 05:21:53 UTC
From: P.A.Booth@bradford.ac.uk
Message-ID: <1995Mar2.052153.3857@bradford.ac.uk>
Source record: 27357

I've just been real stupid (again ;-).

I've got an SH204 which I've had lying around for a couple of months, and I thought I'd download a new version of AHDI and HDX for it (AHDI version 6.06 and whichever version of HDX is bundled with on it a.a.u.e.) and install it on my original (?) hdx disk.

I did this and wiped over the old versions (clever ;-) and then tried to boot with the new software.

It booted up and got to;

Unit 0
Unit 1 - not responding

with this it bombed (4 bombs) and continually looped.

I tried reformatting the drive using HDX and this just either freezes or bombs. Are these versions of HDX/AHDI compatible with an SH204?

I think ICD pro utils are, so if the worst comes to the worst I can use them, but they're at home at the moment so I'm sort of stuck with this drive until I can get them from home.

Does anyone know why they don't work with the SH204?

Can anything else be used with this drive that's on one of the archive or that someone can send me (PD of course... ;-)

Any help would be appreciated.

Paul.

I know that user interface is important, but surely this should have been
your first thought about this prog..... <grin>

|> So, anyways, can anyone direct me to PD or at least cheap DSP .MODS
|> playing source? Thanks.
|>
|> Hmm...
|>

Hmmm... Well, the BiMaster of BTM (or something like that...) code is part
of the assembler library FALCLIB ..... It has a couple of bugs though, and
relies on a pre-assembled kernel....

Or, if your feel like doing something special, you could check out the
(again assembler) fast_dtm code. This is Jaccard Emmanuels DTM player code.

Both of these are available over FTP from falcon/programming directories
on most ftp sites (cnam.fr has them IIRC)

Hope this helps.

Anthony

909. Upgrading MEGA ST 2

Newsgroup: comp.sys.atari.st.tech

>Hello!

I'm intending to upgrade my MEGA ST2 with:
-AT BUS TOS CARD + 420 MB hard disk
-accelerator HBS 640/28 (accelerates m86000 to 28 MHz)
-HD Floppy
-AutoSwitch Overscan.

Is it possible to put them together in my computer?
Is the power supply strong enough?
Do any of these things refuse to work together?

Please tell me your experiences.
Thanx.

Matej

>MiNT, still ignoring the HSMODEM docs.

Well I've spent the previous weekend and several evenings trying to find
out what goes wrong with hsmodem and MiNT 1.12, well 19K2 doesn't work
reliable (at least with RTS/CTS handshake) wherever you put hsmodem....

I still can't put the finger on the problem. It seems to me that the new
Mint version is severely broken for speeds >= 19k2 at least on a normal
ST, with tos 2.06. 9600 baud seemed to work well.

This isn't the first time I had troubles with Hsmodem and Mint. I had it
running stable once using Mint 1.10 (pure C 1.1 compiled) and running
hsmodem before mint.

I too examined the Mintlibs I'm using (pl44). It could be that programs
compiled with this code might (????? not quite sure yet) be broken.

Anyone suggestions.....

Hallo,
I bought my Falcon from a medical student who buys computers at
auctions and re-sells them. I didn't even get a Falcon 030 Manual, but
obviously the hardware isn't pirated!
The computer was owned by J&J Computers which was once the last
Atari dealer in Salt Lake but they went out of business and were forced
to sell everything at an auction. So unless our noble Atari dealer was
loading illegal software, I trust that my NVDI is not pirated!
However, It would be nice to have a manual and registration,
where can I order NVDI and beyond that, where can I get more RAM for my 4
meg Falcon?
Thanks,
Paul.Luscher@m.cc.utah.edu

919. SCSI question & TOS Update Question

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-02 20:44:21 UTC
From: pl4266@u.cc.utah.edu
Message-ID: <3j5an5$f6f@news.cc.utah.edu>
Source record: 27296

Hello Atari folks,
I have a Falcon030 and I use it to do digital direct to disk
recording. I really must know how to terminate a SCSI device in
conjunction with a FALCON. Right now my drive works ok, but I just need
to check my termination set-up to see if this could be causing an
occasional program crash, or wether it is infact the clock-buffer bug.
My set-up is like this :
(I assumed the Falcon is *NOT* internally terminated true ?)

FALCON PORT SYQUEST (also *NOT* internally terminated)
:======================:Terminator::SYQUEST'S ONE PORT
:Terminator::SYQUEST'S OTHER PORT
The top port is connected with a cable from the Falcon going
through a terminator then into the port of the drive.
The second port of the drive simply has a terminator attached.

So, This is my current set-up, is it correct? Should I make any
changes ? The Falcon manual is not exactly clear on what termination
means, and I am new to SCSI, Thanks for your help!

>(used gcc2.3.1 & it did this, I now use 2.5.8 & it still does this).

The gcc 2.6.1 port in atari.archive.umich.edu:/atari/Mint/Gcc/gcc261*
handles it properly, though you'll have to rebuild the binutils
yourself.

If you grab my recent GNU make 3.71 port (also on atari.archive and
mirrors), you should probably increase the stack size to 16k (AFAIK it's
still just 8k); if not, you might get some bus errors on makes with
really long command-lines (this happened to me porting CERN's WWW
library and text-mode WWW browser).

Hi Carl !

I'm really sorry 'bout that but you can't, unless you re-write
the system calls that use the Blitter !!! (NVDI do this for you).

I said I'm sorry 'cause I'm writing a Virtual memory manager
for the Falcon (like Outside) an I have to do this. So if you decide
to do it, I'm interrested.

best regards.

928. X-Mint - virtual memory?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-03 12:48:12 UTC
From: jacquesa@cs.man.ac.uk
Message-ID: <3j736c$9sa@m1.cs.man.ac.uk>
Source record: 27380

I have seen a lot of stuff here about X-windows under mint, but AFAIK there is currently no support for virtual memory (as Outside doesn't work with this combo.)

Is anyone working on this? To me, it seems pointless to have X running without virtual memory on an Atari due to the huge mounts of ram that X requires.

Surely it would not be to hard, as Linux has (i believe) virtual memory and the source is freely available....

When VM is implemented, I may start tinkering.... but not until then.

Anthony

%
% Yes, this has been the cause of nearly all of my problems setting up X
% so far. I have looked all over the place and for the life of me I cannot
% find a version of zoo which supports mixed case filenames. Every version I
% get says that it is not supported. Yet, people are zoo'ing things with
% mixed case filenames and expecting other people to unzoo them and have it
% work which is not very likely. Does anyone know where I can get a version
% of zoo which does support UNIXMODE? It is very frustrating being able to
% see the mixed-case filenames in the zoo archive but having to rename all the
% files appropriately after they have been extracted. I suppose it's better
% than not seeing the correct case-sensitive filenames at all. :-)

Well, all the .zoo files have been replaced with .tar.gz (.tgz) files
on phlem... And to answer:

> I think it's very stable once it's set up right, and porting stuff is
>fairly easy. You do have to use fixstk on some executables to stop them
>crashing unpredictably, but apart from that, there are no real problems.
>The headers that come with the MiNT-X libs are incomplete so you will want
>to find a full X11R5 distribution to poach the /usr/include/X11 headers from.

I *think* the includes and libs on phlem are all up to date, including
libXext for example...

>Falcon. For one thing, often the makefile needs a program called
>"install" and I don't seem to have this anywhere on my system.
The "install" is actually in the makefile which GCC uses. For
example if you have the following in the makefile:

clean:
rm *.o

Then giving the command
make clean
will execute the unix command rm to delete all *.o files.
So the makefile should have the install: in the file.
A good book which describes make is in the O'Rilley nutshell series.

>The other problem may be that I just don't have GCC set up right.
>Can someone with GCC running on their TT/Falcon tell me what variables

937. GEMDOS problems with Linux/68k swap partition!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-04 01:09:09 UTC
From: Jay T Millar <jmillar@delphi.com>
Message-ID: <p+zZdQ1.jmillar@delphi.com>
Source record: 27385

Hi everyone,

With the emergence of a working Falcon kernel for Linux/68k (HD access working, that is) I went a little haywire setting up the system and got a bit ahead of myself. In other words, I created a Linux/68k swap partition on one of my external SCSI drives, and now any time I try to boot up my system under TOS, the fact that the partition is a Linux swap partition crashes GEMDOS!

From what I know, the fix to this problem is to invalidate the partition to GEMDOS, marking it as an 'other' partition (other than BGM or GEM that is).......therefore, I have two questions:

1) What utilities are available to allow me to do this?

2) Is there any way possible to use such a utility without booting with the aforementioned SCSI drive running and fix the partition? (crashes otherwise)

Thanks in advance!

(Also thanks to all the Linux/68k coders out there making our computing lives that much more enjoyable!!!)

: line that controls gain, anyway, that would feed right back into your
: computer and likely into the RCA lines. Or perhaps its just a bias problem.

: In any case, the monitor =IS= the cause. Just cut the sound line from the
: cable to the monitor internals.

Ok, I checked out my monitor cable, and looked up the location of the pins
on the monitor to see which ones dealt with audio. Pins 1 and 5 are listed
as controlling audio in and out, respectively. Unfortunately, pin one on
my cable was not hooked to any wire. I cut the cable to pin 5, but that
didn't make any difference. I guess I ought to take this query to
the .tech newsgroup?

** I thought I'd shoot this over to this thread also, to see if you guys
know what is going on here. I observed later that cutting pin 5

cleared the buzz out slightly, but it's still interfering greatly.

No, some of the headers are still missing from that release (I don't remember which). Also, there is a replacement for the Xaw (Athena Widgets) library on ftp.fu-berlin.de (Xaw3d) which makes for prettier programs (3d buttons & sliders).

```

No! SCSI's aint SCSI's, if you know what i mean. You have to be able to disable parity if you are using the Link or the AdSCSI, BUT!!!! AFAIK, the LINK 2 will enable you to connect to ANY scsi drive. To disable parity is essentially an easy job, you should find a "jumper" connecting 2 pins labelled either PO or PE (on the circuit board), just remove it, and you have disabled parity. Funnilly enough, you will more than likely find quite a few PC & MAC tech's that won't know what you are talking about, mainly cos' it's something that they dont need to know about.

952. AES and GBELL

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-05 19:07:11 UTC
From: dhohenst@gpu2.srv.ualberta.ca
Message-ID: <3jd24v$124k@rover.ucs.ualberta.ca>
Source record: 27309

I just got a most entertaining program off of the net. It operates
much like Soundmaster on the Macintosh. It assigns digitized sounds to
GEM events. It uses the DMA sound engine so it doesn't slow the system
down. But I'm having a few problems with it. one of the ways of using
it is assigning sounds to AES calls, but I don't know what the calls
are. They are identified by number, and I only know the few numbers that
are listed in the docs (ie 10=init_appl 102=close window), and I don't
even know what most of them DO (like menu_text).
Can someone give me a list of AES numbers and descriptions of what they
actually do?
Especially opening a file directory window, and using the trashcan.
Thanks

Doug Hohenstein

Source record: 27329

I'm the not-so-proud-at-the-moment owner of a STACY that won't boot.

Apparently, there is a board that "hovers" above the motherboard inside and is connected by a many-pin connector. I've already had it looked at by an ATARI guy & a non-Atari guy who are at a loss.

I paid many $$ for a portable because I have a VERY specialized application tha is ATARI based ONLY, and I still have to lug my 520 + monitor around due to this problem.

Any suggestions? I live in Southern Californis, but of course, would be glad to ship it wherever it needs to go.

Thanks.

956. Help w/SF354 upgrading

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-05 20:22:59 UTC
From: DOMINGO@news.delphi.com
Message-ID: <3jd6j3$cal@news2.delphi.com>
Source record: 27328
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have an OLD SF354 that I want to upgrade. It doesn't have the nice and easy ribbon cable so that I can just plug in a new drive. It has this goofy cable/connector combo that won't work.

Any hints & tips would be greatly appreciated!

Dom

957. Re: NVDI ? TOS Updates ? Etc.

> : respect to the guys behind this wonderful utility and *buy* it.
>
> I bought my Falcon from a medical student who buys computers at
> auctions and re-sells them. I didn't even get a Falcon 030 Manual,
> but obviously the hardware isn't pirated!

That's easy to tell; NVDI always tells the truth during boot up.

> The computer was owned by J&J Computers which was once the last
> Atari dealer in Salt Lake but they went out of business and were
> forced to sell everything at an auction.

Let's hope not *all* Atari dealers go the same way...

> So unless our noble Atari dealer was loading illegal software,..

Never say never! I've seen it happen...

> ...I trust that my NVDI is not pirated!

If you say so I beleive you. I have *no right* not to beleive you! I just wanted to question the matter a little - it's all too common with great programs and games being *handed over* this way, and the whole Atari scene suffers!

> However, It would be nice to have a manual and registration, where
> can I order NVDI...

I got my NVDI from Falcon Pro Center in Gothenburg (Sweden), but perhaps that's a bit too far...

> ...and beyond that, where can I get more RAM for my 4 meg Falcon?

My Falcon Wings-card *just* about makes it within the original Falcon case ("speaker" had to be moved away three inches), and I beleive most memory expansions have a hard time dwelling in this tight environment. All works fine though.

What's the matter - isn't there *any* Atari dealer around where you live? I live just outside a city of 250.000 people (Malmo), and we have *two* Atari dealers to turn to!

Wishing you all the best in your further investigations

958. IKBD/ACIA programming

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-06 02:45:23 UTC
From: jyoung57@delphi.com
Message-ID: <Ju4Y1Zb.jyoung57@delphi.com>
Source record: 27308

Hi,
I am encountering problems with the following code involving requesting
a joystick packet from the ACIA chip during the vertical blank.
Please note that I have set the joystick into 'Request Mode (#$15)' and
have disabled all MFP interrupts except Timer B (Hblank). I get the
packet header (#$fd) but am unable to get the joytick information that
is supposed to be in the following byte I believe (or two bytes if
there is one for each joystick). Can anyone help out with the activity
of the ACIA when a joystick packet is requested?

```
KB_CNTRL equ $fffC00 ;IKBD control register
KB_DATA equ $fffC02 ;IKBD data register

(Vertical Blank)
chk_acia
btst.b #1,KB_CNTRL
beq.s chk_acia
move.b #$16,KB_DATA ;request packet
IKBD_receive
btst.b #0,KB_CNTRL
beq IKBD_receive ;wait until IKBD says it received the
request
interrupt_request
btst.b #7,KB_CNTRL
beq.s interrupt_request ;wait for ACIA to signal an IRQ
transmitter_empty
btst.b #1,KB_CNTRL
beq transmitter_empty ;wait unitl IKBD has transmitted
get_header
move.b KB_DATA,d0 ;this is the header - #$fd

(Now here is where I should read the next byte off the ACIA KB_DATA register
but all my attempts have met with failure. Can anyone enlighten me as to
the sequence that will extract the packet byte(s).)
.
.
rte

KB_CNTRL (when written) enable receive interrupts (Bit 7)
configure transmit interrupts(Bits 6-5)
configure port settings (Bits 4-2)
set clock divisor (Bits 1-0)
KB_CNTRL (when read) interrupt request (Bit 7)
parity error (Bit 6)
receiver overrun (Bit 5)
```

framing error (Bit 4)
clear to send (Bit 3)
data carrier detect (Bit 2)
transmitter empty (Bit 1)
receiver full (Bit 0)
(KB_CNTRL Information from 'The Atari Compendium' pg B.43-B.44)

Thanks,
Jeff

962. Falcon CODEC

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-06 11:47:56 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Mar6.114757.122@genrad.co.uk>
Source record: 27333

OK, I'm stumped! I've disassembled half of the XBIOS commands
that communicate with the DSP on the Falcon, I've disassembled and
commented the DSP's bootup code, and I understand most of it. But, however
hard I try, I cannot find how the CODEC is connected.
I've got a datasheet for it, and I know it is accessed via a 64 bit
serial word. The only sensible way to do this would be via one of the
DSPs serial ports, ie SSI or SCI. SSI I think is for digital data to/from
DMA and the DSP connector on the back, leaving the SCI. This is capable
of synchronous 8 bit byte transfer with no start/stop bits, so eight of
these end to end would be ideal to talk to the CODEC. Is this how it is
done? Or does it use the SSI afterall?
When I disassembled the Gain and Attenuation XBIOS calls, these
wrote to locations in the 68030's memory at $FFnnnn somewhere (I can't
remember the exact address because I'm at work at the moment). There
was a command copying this data to the address $182A though. Does anyone
know what is at $182A? Is this some method of telling the DSP to set
the gain and attenuation levels via a 64 bit serial word?
Although "The Atari Compendium" mentions many of these addresses,
it describes them as BYTE-wide, yet the disassembled code sets and clears
bits in the full 32 bit width. The book makes no mention of address $182A.

Any help (even a yes/no answer!) would be greatly appreciated.

Well, you're right. It's a pity that Mint doesn't provide
Virtual Memory by itself. It would be the best way to have some.
I would like something like the following line in my Mint.cnf:
SWAP=d:\tmp\virtual.mem 16384
to provide 16M of ram using a file called virtual.mem for example.
Does Eric Smith or anyone else is thinking on a new version of Mint
which will give us something like that ?

: No, of course not. The VDI blit routines will automatically use the
: blitter if it is installed - a major feature of TOS 1.2 if you remember.
: This is the only way you should use the blitter.

Well considering the Blitter is on when GEM is in use its bloody slow.
Although NVDI does speed things up, it still feels sluggish.

I was under the impression (from a posting last year) that the Blitter was
NOT used for GEM and was only used in games and non-GEM based applications.

And of course, as the falcon's ROMs contain no code to do software blits
there would be little point in switching it off without NVDI.

Just on this thread, it is useful to know that MOST PC's will use
COM2 rather than COM1, as the mouse is usually on COM1.
Set this, and all shall run fine!

Karl.

979. Flopfmt wont format double density discs in my high density drive

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-07 05:59:06 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3jgsnb$1ua@status.gen.nz>
Source record: 27338

I have an Atari TT with a built-in 720k drive and an external high density drive. Whilst I can format double density 720k discs in my internal drive, I am unable to format double density in my external drive.
The XBIOS system call Flopfmt with a sectors-per-track value of 9 or 10, when directed to the high-density drive returns a "bad sectors on format" error.
Formatting high density discs in that drive returns no error.
My TOS version is 3.05, and I have enabled the "high density" dip-switch (number 7) on the TT motherboard.
Is this the fault of Flopfmt() or my drive?

Well, if anyone is interested I have answered my own question. With
alot of experimentation, here is the code to request and read joystick
packets directly off the ACIA with MFP turned off and IKBD in #$15 mode.

```
chk_acia
btst.b #1,KB_CNTRL
beq.s chk_acia
move.b #$16,KB_DATA ;request packet
IKBD_receive
btst.b #0,KB_CNTRL
beq.s IKBD_receive ;wait until request is confirmed
get_header
move.b KB_DATA,d0 ;header byte = #$fd
wait_joytick0
btst.b #7,KB_CNTRL
beq.s wait_joystick0 ;wait for signal that data is ready
move.b KB_DATA,d1 ;joystick0 data byte
wait_joystick1
btst.b #7,KB_CNTRL
beq.s wait_joystick1 ;wait for signal that data is ready
move.b KB_DATA,d2 ;joystick1 data byte
```

that's it.

Bye
Jeff

Hi !

I don't know why Carl wants to switch the BLiTTER of but me,
I have to do it because as I said I'm writing a virtual memory manager.
So when Gemview for example try to display an MFDB that in virtual
memory is, the BLiTTER has trouble accessing it (remember : it does not
have a PMMU !). So what I obtain on my screen is "?#/:@!. So at this
time my program do not work without NVDI installed (hum, in fact, even
with NVDI it does not work perfectly well yet).

> Paul Hills

Hello Paul,

As far as I know, and I'm definitely not an expert, the CODEC is connected
directly to the connection matrix to which also the DMA and the DSP
(through the _SSI_) are connected. I guess the CODEC is controlled through some
of the $FFF... locations that also control the connection matrix. E.g. the
sample frequency is controlled by the connection-matrix registers, and I
believe there also is a register (listed in the Compendium) that contains
the bits indicating a CODEC overflow.

Hope this helps,

Jaap-Henk Hoepman

I tried yesterday to initialize a partition on my hard disk with MINIT.TTP in
order to have a Minix file system for Mint.
But it refuses to initialize it ! As the size of my partition is 170Megs, I
wonder if MinixFS can work beyond the 32Megs limit.
Any clue ?

Setup: MegaST4, PAK/3 68020-68882 16Mhz, TOS 2.06, ICD Advantage+, ICD drivers
ver. 6.5.5 and a free disk (for Mint) of 170Megs (Quantum LPS170S)
and for the soft: MiNT 1.08 - 68030, GEM AES 4.1

To make this a little clearer: There is a call something like Blitmode, which
enables you to switch blitte on and off. However, Falcon ROM does not contain
drawing code, so it simply ignores the Blitmode call.

NVDI, on the other hand, does contain drawing code, so it honors the blitmode
- even on the falcon.

In other words, if you want to turn off Blitter in your Falcon, buy NVDI.
You should buy it anyway.

: : Please it's not necessary to hide .

: so, what problem do you have ???

There is no problem concerning HP48 and Atari systems, so why should
we write something.

We are able to use the stock PC-cable, there is a Kermit for the
ST (well, it does only run on /dev/ttya, but that shouldn't be
a problem)
Most files for the HP48 are in ZIP-Format which STZip will handle.

Is it a MegaSTE? If so, this is a common problem with early units.

Yes it can
Try setting up a V2 file system, as I had a similar problem where a 128 Meg partition was set up to only 16 Meg without specifying this.
I also decides to tell it the drive parameters, just to be sure.

Any SCSI drive which allows you to disable the parity-check-enable (the Mega STE SCSI card does not generate parity). Max size of drive depends a bit on your driver software, but in principle you can for example run 1 Gb as 4 BGM partitions of 256 Mbyte (max partition size) with modern drivers. Parity is your biggest problem though. Most drives today omit this little configuration feature and won't work then...

Have fun.

Source record: 27194

Recently I've started to have problems with the 1.44mb drive on my Falcon. Symptoms include the drive saying the floppy is corrupted, or that it can't be formatted as it's write protected.

This morning when I booted up both the floppy A: and B: icons were missing. On rebooting they did reappear, but operation is still unreliable.

Has anyone experianced anything similar at all, or does anyone know a fix for this (without replacing the drive)?

The CP/M emulator on the Atari ST *does* work, but it's not
a really easy thing to get going...

There are CP/M terminal programs which will work under
the ST CP/M emulator, so I do know that the RS-232 port
is accessible. (I finally managed to get one working so
I could directly download CP/M programs instead of having
to go through the conversion process from ST disk format).

I should look to be sure I still have it available before
promising it, but years ago I wrote up a text file on how
to get the CP/M emulator working... If I can find it, and
you think it might be helpful to your friend, I could
e-mail you a copy.

Just to add some more confusion:

I am able to use HSMOD04 with MiNT 1.12 and Mintnet 0.70. I recompiled
tip (with SozobonX and Mintlibs pl44) so that it uses RTS/CTS and 19K2
by default. The connection is easily established and I get fast
ftp-connections (1.6 K/sec on average). By the way I load hsmod BEFORE
MiNT (as prescribed by the MintNet installation manual)
Oh by the way the slattach program will automatically put the tty
(/dev/ttya, I use Mintos) in RTS/CTS mode if you hadn't done so already.

Rod McCall (rmccall@mcs.dundee.ac.uk) wrote:
: I was under the impression (from a posting last year) that the Blitter was
: NOT used for GEM and was only used in games and non-GEM based applications.

I was doing some speed measurements on my GEM based life player (biglife3 available from umich). With blitter enabled, the LineA bitblt function is marginally faster than the VDI rectangle copy; I don't have the data to hand at the moment but I think it was 6 microseconds per call on my STe, and this is independent of the area being processed. With the blitter disabled, the VDI function still works, but slowly, and the time seems to increase proportional to the area being processed. Trying to use the LineA bitblt with the blitter disabled caused the program to crash.

This is probably one of the more stressful tests because it is converting a fairly large bitmap to the current screen resolution, exactly the job where the blitter makes a difference, especially in medium and low resolutions.

The FTP server is down at the moment at phlem (& phlim). The reason
is we've just upgraded the SGI machines that host the disk the FTP
archive is on, and SGI didn't include a version of NFS that allows
you to export disks... The machines can import disks fine. So neither
phlem nor phlim can read the disk, so you can't see anything when you
ftp in. Sorry - we're hoping to get it back online ASAP.

Basically we've just spent #60,000 on 2 X terminals. The phone call
after lunch is going to be interesting :-)

STOS FAQ v0.8a

Generated by: STOS Mailing List - stos@bath.ac.uk

Enquiries: Should be sent to Les Greenhalgh - Email address in Authors section.

Authors: MUG U.K(tm)/Mike Mee
c9251129@zeus.hu.ac.uk - a.k.a ()rm of Digitallis/Jon Lewis
Mark.Montreuil_DGNM@banyan.dgim.doc.ca - a.k.a Mark Montreuil !
ma2lgj@bath.ac.uk - a.k.a Les Greenhalgh
ae@minster.york.ac.uk - a.k.a Andrei Ellman

This FAQ will hopefully answer all the questions you have on the programming
language, STOS. If you wish to add any new sections to this FAQ, please
send an example outline to the above Email address.

Abbreviations used.
-------------------

STU - ST User (more commonly known as ST User)
STF - ST Format (more commonly known as ST Doormat)
STR - ST Review

BTW - By the way
sp? - Spelling confirmation required ! We maybe coders, but there is no
guarantee wee kan spel !

[ ] - Comments from a mailing list member - usually Andrei !

Contents
--------

Section: Areas covered:

1 What is STOS ?

2 Where do I get hold of it ?
```

3 What is it like to program ?

4 What extras are available to compliment it ?

5 Can I *really* write commercial quality games with it ?

6 Are there any books available ?

7 What are extensions, and where do I get them from

8 Recommended programs - commercial & shareware

9 Miscellaneous section

---

1. What is STOS ?

Written by Francois Lionet and Constantin Sotiroupolous (Spelling please?)

Published by Mandarin/Europress Software

STOS is the forerunner to the Amiga version, AMOS, AMOS Pro etc..
And its a great shame that STOS hasn't been supported by Mandarin since they released AMOS Pro because there are a lot of people who use their language and get frustrated because they can't call for help!

Mark Montreuil came up with this definition ......

STOS (for ST Operating System) is a programming language based on BASIC (Beginner's All-purpose Symbolic Instruction Code), that makes creating sound, graphics and movement on the Atari 16/32 bit line of computers as painless as possible. STOS has commands that handle input/output, animation, music, logic and program execution in an easy to understand way. A STOS programmer can spend more time on actual game design than on the "fiddly bits".

Many things that were not considered possible, such as changing screen resolutions in the middle of a program or writing Arcade-type games in a BASIC language, are a reality with STOS. Hundreds of quality games, demoes, utilities and educational packages have already been written in STOS.

STOS is a full-featured software development tool. Using STOS, art screens created in specialized paint packages, like Degas, Neo or Crack Art, can be easily used to create basic game graphics. STOS has built-in Sprite, Music, Map, Font and Sound effects generators. You can write some code, and, at a keypress, call up any of the added utilities (called accessories) to work on added features. You can even write your own accesssories, to use at any time.

Machine-code routines can be called from within STOS, and new commands (called extensions), can be written to enhance STOS's functionality. Some extensions that are currently available include 3D, the Missing Link and Misty (see Extensions for further information).

All in all, STOS is the perfect tool to bring your game ideas to reality without having to trudge through reams of machine code!

Cheers Mark for the few above lines on STOS. Anyone else fancy adding more to it ??

---

2. Where do I get hold of it ?

Has been given away with magazine cover disks, ST Format and ST User (I need a list of which ones!). The problem with the versions given away with the magazines is that they were no manuals.

Also most mail-order firms should stock a copy of STOS. Try to haggle and get some decent prices. Don't buy the Interpreter without buying the Compiler !

Apparently every ST sold in Britain comes free with a copy of STOS with the manual thrown in. Any more information on *exactly* you get would be appreciated. If you have the spare money and you want an extra development machine, then it maybe worth getting hold of one ?

()rm has suggested that you look at bargain buckets in computer shops or check out the odd car-boot sale. But that is ()rms sense of humour !!

---

3. What is it like to program ?

()rm says .....

STOS is BASIC, but a powerful version of BASIC. It has built in sprite handling routines, music commands, sound effects and numerous other routines, functions and commands which can be very useful.

At first glance STOS looks horrible, but after a few weeks of programming it, you will wonder how you ever lived life without it (OK, not the truth, but it IS good for something!)

As STOS is based on BASIC, it is very easy to program, in fact, I'd go so far as saying STOS is the easiest BASIC to write anything in. Everything can be set up very easily, for example, you want to play a sample yeah? Get the sample player extension, whack it in the STOS folder and then re-boot.

(Or for those lucky hard-drive owners, unlike ()rm, copy all the extensions into your STOS folder and leave them there !!)

Now play your sample with the command SAMPLAY.. No need to load routines into a memory bank, peek and poke a few numbers and call it. This is one of the nice things about STOS, its upgradeability..

Pity that the language hasn't been given a major rehaul with all these new functions BUILT IN.

Andrei has this to say on the matter ....

When STOS was designed, it was made to make writing games easy. The programmer would think mostly on the WHAT, rather than the HOW. In other words, it was supposed to make you able tp program games without having to think about how

tyour ST works. For example, sprites could easily be displayed, moved, and animated with ease. Unfortunately STOS sprites tended to be a bit slow, but The Missing Link extension replaces STOS sprites with Bobs. Bobs are a bit more tricky to implement (you have to move and animate and erase them yourself), but they are much faster than STOS sprites. There is a similar story for other aspects of the language.

STOS is a BASIC that uses line-numbers. This tends to be messy and often encourages programmers to write "Sphaghetti code" (There are gotos running all over the place). It would have been better if STOS had no line numbers, but would call procedures by their names, and have one command per line which was indented appropriately.

---

4. What extras are available to compliment it ?

STOS Compiler - Actually makes your programs faster (HAHAH!)

STOS Maestro - Sample playback routines for STOS (and sampling hardware depending on which version you buy).

STOS 3D - Add 3D commands to your games. Only drawback is that all the objects have to be loaded from disk each time they are required.

STOS Tracker - Playback tracker tunes, albiet a bit slowley..

Andrei has added this as well .....

I have heard about a program written in STOS which adds proper procedures to STOS and gets rid of line numbers. I believe that this compiles the new type of code into STOS. This was originally listed in a STOS club newsletter, and Goomans have a copy on disk. Does anyone have experience using it?

---

5. Can I *really* write commercial quality games with it ?

Commercial Games

Check out:

Bullet Train (revamped version was released in France a few years ago)
Bumpy
Cartoon Capers (also came with a dual-joystick extension)
Cool Croc Twins
Gilberts Day Out
Prehistorik
Skate Tribe
(We think there's a few more..)

Educational programs

All Fun School programs (also have full STOS source on disk)

Henrietta Series by Lander (also with full STOS source on disk)

Loads of other educational programs by other firms. Some names would be appreciated.

Commercial quality shareware/public domain games

There are also a few examples of top quality shareware games written with STOS. So grab a hold of your favourite PD library and ask for the following:

Grandad & The Quest For The Holey Vest by Ian Scott.
The Glass Buttock of Tharg by Ian Scott.
Grandad II - The Search for Sandwiches by Ian Scott.

Ozone by Nick xxxx (can't remember his surname!) - was turned down by Ocean at the last minute because they found out it was written in STOS.

Pyscho Pig, Sim Pig, Colour Clash, Fatemaster by AnimalSoft.

Plop by ()rm - apparently the freebie you get when you register is better!

Bio Hazard by Les Greenhalgh.Dungeon Master in space type thing.

Most of the stuff by Andrei (some feature STE 8 player options) of which he himself recommends the following: Linecrash, Mazewar ST, Video Games v0.5 Pacmen, Alienation (currently undergoing a re-write) ?

---

6. Are there any books available ?

As far as I know there is the one by Stephen Hill, which was published by Sigma Press. Its title is Games Makers Manual. It teaches you a seperate game style within a chapter, and for the more advanced, gives you the lowdown on writing extensions.

There is a STOS guide published by a PD library, but whether its any good is another matter all together. It is 30 quid and contains some 400 pages of STOS related stuff. Takes you from the complete beginning and shows you how to write arcade, strategy and educational programs. Anyone out there know how good it is ?

Disk Magazines/Newsletters

Not exactly books, but disk magazines are in abundance. Some contain partial STOS sections, whilst there are (or in some cases, were) others which are STOS related and nothing else is mentioned.

Check out:

STOS Bits 1 (now dead - forerunner to HP Source)

HP Source 1,2 (now dead)

STOSSER Disk Magazine (still going - now on issue 19 ?)

ST Programmer (I've only seen one issue!)

Ledgers (had an occasional STOS section)

Maggie (in amongst the swear words was the occasional STOS column)

Anyone know of any other magazines ? Please send in details of whether
the magazine is going or not.

Also required is a compilation of what was printed in ST Abuser, ST Doormat
and ST Review regards STOS, along with a similar listing of useful routines
and articles from STOS Newsletter. Unless, there is already one available.

According to Andrei, New Atari User (still alive?) had a STOS column in
the 16-bit suppliment ? Also there is the Atari Magazine, a French mag which
also has a STOS column or mentions it occasionally !

There is an online-help program for use with The Missing Link. This handy
reference guide will give you the keyword and appropriate parameters for
each Missing Link command. Just like Windows Help files on a PC !!

---

7. What are extensions, and where do I get them from ?

Extensions are a way of further expanding STOS. All the following are
extensions, Compiler, Maestro, 3D and Tracker (Released in the P.D.)

There are numerous extensions in the public domain. The favourites being
MISTY and MISSING LINK, both been written by a group called Top Notch.
They add commands which SHOULD have been in STOS from the start.
Andrei has sent me the following exhaustive list of extensions available for
STOS. It was in two parts, one by Andrei and the other by Les Greenhalgh.
I will use Les' version as it lists the FTP sites where most of them can
be found. Take it away Les ....

The consise guide to Stos extensions.
By L.J.Greenhalgh

Terminology

a.a = atari archive umich edu in either language or progamming folders
k.l = can be found in ftp.ftp.uni-kl.de in the directory
pub/atari/programming/STOS/extensions
s.w = Shareware
cr = Shareware version is crippled
pd = Public Domain and freely available
GI = Goodman International PD Library
STF = was on an ST Format cover disc

Misty extension by Top Notch Software (sw STF)
Can be found: a.a in both Stosers.zip and Misty.lzh files
Miscellaneous graphics commands including an improved screencopy which can
use any of the STs bitplanes, instead of 4 at a time in STOS.

Excellent stuff.

Missing Link extension Top notch Software (sw cr STF)
Can be found: a.a in Link1.lzh - Link3.lzh
about 50 new gfx commands including replacement sprite commands and
commands for dealing with maps and multiple palettes on screen.
A must have.

Extra extension by Martin Cubbit (pd)
Can be found: a.a k.l extra.zip also in cyber.zip
loads of miscellaneous commands including cookie reading commands, mirror
and blur sections of screen , paste strings in opaque mode, format text,
detect tos version etc.
Brilliant

Stars extension by Lee Upcroft (pd STF)
Can be found: a.a stossers.zip
Commands for drawing 3D and 2D starfields, very quick.
Excellent.

Blitter extension by Asa Burrows (sw STF)
Can be found: a.a in their uploads folder in blitter.zip
Commands for using the blitter in MegaSTEs, MEGASTs, STEs, Falcons?
Seems a bit slow.

MIDI extension by Asa Burrows (pd STF)
Can be found STF , GI
Commands for using the STs MIDI port.
Never used it.

Stos Vidi extension (c)
Commands for interfacing with the Rombo VIDI digitiser.
Never used it.

Stos Maestro (c)
Commands for playing samples through Stos, excellent although better
performance can be obtained from the Missing Link's Digiplay command.
[AE - I think that TML does not emulate STOS Maestro's reverse playing
abilities]

Stos Pac/Squasher ? (c)
Commands for packing/unpacking all types of memory bank not just pictures.
Never used it. Depacking ability surpassed by Missing Link. TML supports
packers that can pack tighter than STOS Squasher (eg. Pack Ice).
Unbelievably buggy - read docs with Mega Depacker for more information.

STOS Sticks (c) [AE 26-4] Is that Twinstix?
Commands for reading both joy stick ports. Unnecessary, use TML equivalent.

Control Extension by Les Greenhalgh (pd sw)
Can be found: a.a k.l in control3.zip
Includes a replacement sprite engine which allows you to flip images and paste
them in either opaque of transparent mode. Allows you to use these images on

low rez screens of any size, ideal for scrolling large screens on the STE.
Commands for 16 colour fonts, spreading palettes ,commands for reading a
parallel port joystick adaptor, a switch construct for STOS,border removal
commands, a super fast add command and other miscellaneous stuff.

Quick Extension by ? (sw?)
Can be found: Stossers disczine
Commands for super fast horizontal scrolling, rasters, stars.
Seems good.

STOS TOME by Aaron Fothergill (c)
Can be found: GI
Commands for drawing maps, irrelevent now the Missing Link exists.

STOS 3D by Voodoo Software (c)
Commands for manipulating 3D objects, unusable unless you have a hard-drive
and 1 meg. Too limited, no commands for rotating around current heading and
no commands for representing horizons, ground, etc. Very large files. Objects
cannot be stored in banks, but have to be loaded with purpose made extension
commands.

Cyber exntesion by Martin Cubbit,Andy Cato and Les Greenhalgh p.d a.a k.l
Allows you to play .seq files from STOS. Very good.

Comming soon...

STOS ninja tracker extension for STE/TT/Falcon
Finally a decent tracker for STOS. Allows you to play protracker mods
from a bank in the background at up to 21khz. Commands for vu meters,
track frequency,pattern positions and much more.

At least 2 Falcon extensions are under development which will allow you
to use the Falcons higher colour modes including truecolour and the
DSP for playing mods!

Eagle extension.
A mamouth 80 command extension.

Other forms of extensions that you know about would be appreciated in this
list. As ()rm recently suggested, all those who are in the process of
writing an extension, put your heads together and come up with one mother
of an extension !!

There are other ways of improving STOS without having to use extensions. These
take the form of machine code routines which you pass some variables and
call them. A few of them have been taken from the same list as compiled by
Les and Andrei.

Some Machine language routines used with STOS

BITCOPY
This is what I believe to be a routine that is similar to Misty's SKOPY
command. Top Notch used this in their demos before they wrote MISTY which

now makes BITCOPY obsolete.

BORDER
Top and Bottom border overscan in STOS. STOS runs just as normal, except when you use the mouse/joystick/keyboard, the overscan dies. The top of the screen starts as 'physic', and continues as normal as if the screen was greater than 32K in size. Works on STFMs and STEs.
Found on a disk of the Cunning Demo.

OVERSTOS
Full screen overscan. Can only display a static picture. I think this has problems on STEs. Found on a disk of the Cunning Demo.

RASTER By Neil STewart of Flair
Routine that changes the value of only one colour on the screen. This was later implemented in Son of TML's RASTER command. Can be found on one of the disks from the Cunning Demos by ACO & Flair.

STOS-SPEAK by ?
A patched version of the original SPEAK.PRG - allows you to use speech inside your programs by sending a string of characters to the program.

SPECTRUM (I am not sure of the exact name)
Displays spectrum 512 colour pictures. Very limited as you can only exit from display by pressing space. Shareware (was once on a STF coverdisk. If you register for 15 pounds (A rip-off), you get a version that can display the pictures in a window. I have not got the registered version. This was advertised in ST Format in 1992)

STOS_512 By ?
Routine that splits the screen into several palettes of 512 colours.
This was later implememnted in TML's PALSPLIT command.

TRACKER
An improved mod player. Found on a disk of the Cunning Demo. ()rm is hopefully going to working on an interface to allow the use of the Ninja Replayer routine from within STOS. More news when he has finished failing his degree !

If anyone fancies adding to the above list, then please do. You know where to send any additional information. Apparently larger lists exist of extensions for STOS, but these can be found in STOSSER magazine. If someone can upload or Email a copy of the latest list, I can add them to the above list.

---

8. Recommended programs - commercial & shareware

A *DECENT* art package. Recommended commerical ones are:

Crackart (recommended by ()rm)
Dpaint ST (recommended by: MUG U.K(tm))
NeoChrome Master v2.28 (recommended by: MUG U.K(tm))

A *DECENT* tracker editor. Try not to rip off someone elses work !

Sample-based ones ......

ProTracker 2 by Wizzcat/Deltaforce
Octalyser by ?? (STE only, but has option for 8 channels of music)

Soundchip-based ones

Megatizer by Sector One.
SID Editor by Animal Mine (improved version of Tri-Sound, with SID Emulation)
XLR8 Editor by Sentry

(all the above have the ability to assign 1 channel to play samples)

Without plugging my own stuff too much, if you can find copies of my 'Makin Sweet Music Disks Vols 1-3', they all contained ripped music from games and demos. Each folder on the disk contained the 68000, GFA and STOS replay routines ! If I can get a tune playing in 68000 or GFA, then I don't see why I can't knock up a STOS front-end.

()rms music player program has all the necessary information on screen for setting up and calling the myriads of music available in the ST music-scene.

How to get STOS up and running on the Newer TOS'
TT & Mega STE

Currently it is STOS FIX v3.0 by ?? and it is only available from Goodman Enterprises ! Charging for a program which fixes your STOS code and leaves a bloody advert for Goodman on the front of your code ....

Falcon
You need STOS Fix 3.00 (given away on a recent ST Format)
by Robert Quez???? This will patch STOS for the
later TOS'. Bear in mind that this will only patch STOS to work on your particular TOS. The author is rumoured to be working on a version which will patch STOS for multiple new TOS'.

---

9. Miscellaneous Section

"What versions of STOS have come out?"
"What is the History of STOS?"

Both questions answered by Andrei.

STOS 1 was only released in France in early 1988 (published by Jawx).

STOS 2.3 Was released in the UK By Mandarin in November/October 1988

STOS 2.4 Is a patch to remove some bugs in STOS 2.3 and make it work with the compiler (1989)

STOS 2.5 Is a patch to make STOS run on the STE (1989)

STOS 2.6 is a patch to make STOS run on STEs with TOS 1.62 (1990)
If your version of STOS is below 2.6, You must update it immediately,
especially the compiler. You will then be able to make programs that
run on TOS 1.62

STOS 2.7 (compiler only). Makes programs that use the STOS tracker extension
compile. I am not sure whether or not it is nescesary or not if you are not
using the tracker extension.

Also, FALCOS was being developed (STOS for the Falcon). Apparently, this
project was stopped due to a disagreement between Atari and the developers.

"How to make it not look like STOS!" - Andrei answers a few more questions.

- Try and avoid the 'appear' command (unless the appear you are using is fast).

This tends to give the game away. STOS 'appear' does not let you press a key to
speed things up.

- Get rid of the F-key window first.

There is nothing more "Written in STOS" than seeing the F-Key window when you
have just loaded a game. Alter this within the compiler settings.

- Change the font.

The Lo-Rez font also gives it away. I personally use the font of the Atari
8-Bit computers.

- Change the mouse pointer - almost as ugly as the AMOS Professional one !

- Different type of cursor - everyone recognises that thick ugly cursor !

- Avoid using the SHOOT and BOOM and BELL commands unless nescesary. Replace
them with sound effects from a piece of hacked music ! Try the following:

Count Zero - Killing Game Show (20 SFX)
Mad Max - Numerous pieces have Sound FX embedded
David Whittaker - His fast music may be awful, but most have SFX

- Replace the STOS keyboard click or get rid of it completely. There is a poke
to use the standard ST keyboard click from STOS, but I don't remember it.
[Details would be nice !!]

- Different windows and File selectors (not sure about the new Windows
extension).

You may want to mention that it was written in STOS directly on the title
screen, or say this in the documentation. The idea is that as well as letting
people know it was written in STOS, it can give the WOW effect if it is good.

Shrinking the size of your compiled code by MUG U.K

Well, this section is fairly easy to do. Follow these simple rules.

If you have ANY other packer not listed here, BIN IT! It is either
incompatible with the Falcon, or has a pack ratio similar to that of the
original versions of the Jek Packer - ie. rubbish !

Packers - The Definitive List

Speed Packer v3.0 - definitely the best. AUTO Depack program as well
as Self-extracting archives !

Atomic v3.5/v3.6 - second best. Apparently does not work on the Falcon
but I will release some source code that might allow
you to make your own program headers for data file
packed versions of Atomik files.

ICE v2.40 - Stalwart and much used packer. Still used after all
these years. Compatible with the Falcon but it
cannot match the above two for output size.

Anyone recommend any others ?

Depacker Programs

I can heartily recommend the following programs for converting your old packer
formats back into STOS code so you can patch them and repack them to work on
newer machines. Try....

Multi Depack v1.5 (or the leaked preview versions of 2.0/3.0) - I wrote this!
Mega Depacker v2.12 (by Mike Watson)
Naughty Depacker
New Depack (new name for Mega Depacker)

If the program will not depack with any of the above, then there must be
a reason why it won't let you unpack it !!

Well this is the end of the STOS FAQ, designed and written by members of the
STOS Mailing List (stos@bath.ac.uk).

Anyone is welcome and indeed, encouraged to send in alterations and additions
to this FAQ.

We hope you found it useful. Any Public Domain library is allowed to
distribute this FAQ, but please do not distribute any versions lower than
v1.0 as they are pre-release and probably quite embarrassingly small in size.
Also do not forget to credit that this FAQ was generated by members of the
STOS Mailing List.

1007. Re: Blitter

ogal@cix.compulink.co.uk ("Ofir Gal") writes:

>The problem is that you have to disable it if you want to use virtual RAM.

Yes, disabling it (i. e. using NVDI) is the best. But you mustn't
necessarily disable it to get virtual RAM. OUTSIDE hooks itself into the VDI
if no NVDI is present on the Falcon and tries to compensate for the problems
that arouse when the blitter is used. This works quite well as long as
nobody tries to transfer data from a source in virtual RAM to a destination
ALSO IN VIRTUAL RAM. As long as source OR destination are not both in
virtual RAM you don't need NVDI.
To be honest, I suggest using NVDI nevertheless because to do this trick
OUTSIDE needs quite some amount of memory for buffering data and of course
NVDI speeds the Falcon up a lot with and without virtual memory.

1012. power supply for 1040st needed

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-08 19:20:34 UTC
From: dalewis@cs.buffalo.edu
Message-ID: <D54z2B.4J8@acsu.buffalo.edu>
Source record: 27193

Hello,
It appears that the power supply on my 1040ST has died. If anyone knows
where I can get a replacement for it, i'd appreciate it if you would let me
know.
Also, can someone tell me what each of the pins (6 of them i believe) are
for? (specs in case i have to build a replacement ..)

thanks,
dough

1013. Printerdrivers for Atari. WHERE?

Does anyone have Linux running on a NON suped up Falcon?

If so what is it like?

Fast, stable etc?
What config do you have?

Rod

Owen Rees (rtor@ansa.co.uk) wrote:
: Rod McCall (rmccall@mcs.dundee.ac.uk) wrote:
: : I was under the impression (from a posting last year) that the Blitter was
: : NOT used for GEM and was only used in games and non-GEM based applications.

: I was doing some speed measurements on my GEM based life player
: (biglife3 available from umich). With blitter enabled, the LineA
: bitblt function is marginally faster than the VDI rectangle copy; I
: don't have the data to hand at the moment but I think it was 6
: microseconds per call on my STe, and this is independent of the area
: being processed. With the blitter disabled, the VDI function still
: works, but slowly, and the time seems to increase proportional to the
: area being processed. Trying to use the LineA bitblt with the blitter
: disabled caused the program to crash.

: This is probably one of the more stressful tests because it is
: converting a fairly large bitmap to the current screen resolution,
: exactly the job where the blitter makes a difference, especially in
: medium and low resolutions.

Its rather worrying that the system I have reports 29% on some aspects
of graphics, even WITH NVDI installed.

Is their any way of speeding up the GEM code, ie making it leaner,
meaner and faster, by replacing certain segments of it?

1017. REQUEST: ATARI VT52/ANSI/VT100 CODES

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-08 21:15:11 UTC
From: matti.koskimies@amda.or.at
Message-ID: <1664457.ensmtp@amda.or.at>
Source record: 27191

I already posted this request some times to the comp.sys.atari.st newsgroup but didn't get any response so I thought I'd post it here. So, would anyone here possess the codes (preferably with some explanations :)) to Atari's VT52 and/or Standard ANSI and/or Standard VT100 emulations? If you do, would you please send them to the address listed below... I would be REALLY grateful!!!

1018. Linux patch level 5

Has anyone got this new version working on a Falcon ?
I tryed it the other night with the ataboot0.5.gz or whatever it is called
and it doesn't seem to work. I have tryed using the command line
root=/dev/hda3 which worked with a previous version but all I get when I
try this now is booting linux and then the computer hangs up on me.
If I try just loading to ramdisk image file with the command line
-r filesys.img I get a corrupt screen with lots of colour on it and then it
just hangs again.
Anyone with any ideas for me about what I may or may not be doing wrong
please e'mail me at cju920@heaton.unn.ac.uk or just post the answer here.
Thanks in advance
Flinny.

In article 5t6@dux.dundee.ac.uk, rmccall@mcs.dundee.ac.uk (Rod McCall) writes:

> I am interested in installing Linux on my Falcon. Is it quite easy to
> install?
>
> Rod
>

It's not too hard, but there seems to me to be a great lack in general
documentaion. I've got it running on my TT, but I had to poke and prod
a fair bit first, and I was mostly just guessing--I was following the
Amiga installation docs.

Some questions I still have:
I don't seem to have the serial ports active--/dev/cua0 isn't
connected to anything. Is there some trick to this, or do I have to recompile
the kernel?
When I try to run X-windows, it can't find the screen ('fdcurrent'
or something like that). All the /dev/fd... stuff is there, but how do I
connect it?

-thanks

I played around with it for a bit in 1986 before I had any *real* software
for my ST. It seems to work just fine - though several of the standard CPM
utilites like 'pip'(?) are missing.

> Specifically, is it possible to use the RS232 port under CPM emulation?

I'm pretty sure it did - can't remeber if I tried it though.

:-)

>your biggest problem though. Most drives today omit this little configuration
>feature and won't work then...

I recently bought a Quantum 540 mb SCSI 2 drive (at least it's suppsed to
be SCSI II) that has two pins you jumper if you want parity. It'd seem
funny to not that the option to turn parity on and off. SCSI is
supposed to be a very general HD standard...not like the PC bound
IDE....

Be VERY dure your RTS/CTS is turned OFF in your control panel. The
ST won't talk to the PC if this is on. I just set this up myself,
works extremely well, at 19,200 on COM2. :-)

Hope it helps!

>

OK, I tried not loading HSMOD drivers at all and then TTser2 did not support
38400 under Mint1.12/MintNet 0.70/pppd - with the drivers it does. This tells
me that the drivers are having some effect but the 57600 mode is still not
supported. Either way I now think it doesn't matter since the pppd and
ppp0 interface use VJ compression so even for text I don't think anything
is going to come out of my modem > 38400 since the data is all compressed
anyway. It probably averages 1600cps like when downloading any zip/lzh/arc
or other compressed data.

It would still be nice to figure out why Mint doesn't allow the higher
baud rates supported by HSMOD.

>Is it possible to get the AES 4.92 part out of the Falcon patch so that
>other people can use it, or does it have some Falcon specific stuff in it?

It is almost impossible to do such things, so you can't use TOS.IMG.
But if you have the GEM.SYS (or GEM.PRG) file, which contains only the new AES
(v 4.10 or 4.11), you can use it on any ST-computer with TOS 1.04 (and newer).

I use it on an old TOS 1.02 ST, with a little patch without any problem (apart from
the loss of memory).

1028. MiNT files

No problem with any TOS >= 1.04. Just select gemini.app in the file
window and klick on "register app" (or whatever it's called in the
english version of gem). There is a button in the dialog which says
"auto" or something. Selecting this will insert a line in your
desktop.inf file which makes gemini be loaded at boot-time directly
after the accs.
If your TOS is an even older thing, you can try using a seperate
program that provides the same. As there are quite a lot of these and
I don't need to use to, I can't tell a name, sorry. Can anyone??

|> Rod

The blitter IS used, whatever previous posts have said. You have a Falcon dont
you Rod? Try running Backwards. Slow the blitter down to 8 Mhz, and you will
definately notice a difference... And dont say its backward's other patches,
because you can try it with the BLiTTER at 16 Mhz as well....

If you were to hack the OS (as some others arround here seem to enjoy :-) then
I am sure that you would find the BLiTTER is used...

Also, note that the Atari documentation for the BLiTTER (that I got off the
net)
says that "Revised TOS ROMs will work in concert with the BLiTTER, enhancing
the
performance of many VDI and "LINE A" operations".

System Solutions in the UK will be selling this board shortly.

Are there any users of it out there?

If you are one would you mind answering a few questions?

What memory configuation does it take?
What speed increase do you get?
Does any software refuse to run?
Do you regard it as a worthwhile investment?

Cheers

Rod

You don't need bg, just put an & at the end if you're using a decent shell.
As for where to get the others from, I could give you a copy (BTW the
latest version of gcc is in archives of over a meg on aaue. I'm sure there
must be an easier way but the only way I could think of to transfer the
files on 720k floppies was to uuencode them!)

I just tried to run it (on a TT with 4M ST, 4M TT RAM) and it just hangs
right after the "Booting Linux..." message, both from RAM and from disk.
It seems to be the kernel rather than the bootstrap, since the pl4 and pl5
bootstraps both work with the pl4 kernel, but neither with the pl5 kernel.

Hi,

I have an Atari Mega 2 STe (with 4 MB). When using a Hayes Ultra 9600 modem, if a user calls my bbs with a 2400 modem it will connect at 9600 and they will get a partially garbled screen.

I have downloaded several HSModem fix files, but cannot seem to get any of them implemented. Can you offer me some assistance?

Thanks.

[...]
: Can someone give me a list of AES numbers and descriptions of what they
: actually do?
: Especially opening a file directory window, and using the trashcan.

If I remember right, the docs had most of the aes calls listed.

Using the trashcan does not invoke an aes call, unfortunately. And unless your gbell is a later version than mine, you can't assign samples to gemdos calls (such as fdelete()) unfortunately. As for opening a file directory window, you would simply use the wind_open() call, although this would be called for other than directory windows also. If you want a different sound for each directory, use WINAME. I can't remember the exact syntax fro gbel, but you can find out what it is in the docs. But, for example, if you wanted to play sound.avr when a window to d:\app\ was opened, you would make a line WINAME and say the sample as sound.avr and the string as "d:\app*.*" or you might have to use " d:\app*.* " (note spaces.)

Hope that helps,
Mario Becroft (mbecroft@iconz.co.nz)

The CODEC is connected to the DSP, DMA channels and external digital input
via a "Matrix". This is essentially a little telephone exchangesque
thing sat inside your Falcon, it enables you to do things like MicInput(via CODEC)->DMA
Record->DSP->Headphones(via CODEC).

The DSP has, unfortunately, nothing do with setting gain and attenuation of the Falcon
sound subsystem. I assume this is all handled by a couple of industry
standard chips, like the ones you'd find in a TV or something probably.

If you want the DSP to control volume and stuff then you need to write a
small program to do it. And of course you'd have to set up the matrix to
pipe the sound through the DSP to start with.

My best advice would be to get hold of the Atari Developer Docs. That was
how I got on top of all this stuff about a year ago.

I can try and give you more detailed info if you think it'll help...

From: jat@unix.york.ac.uk
Message-ID: <794833696.4@cs.york.ac.uk>
Source record: 27203

Is it at all possible to share a single hard disk between two Atari STs?
I've heard from people who use the same SCSI disk for computer and sampler,
so I wonder if it's possible with Ataris. Obviously disk accesses would have
to be non-simultaneous, but apart from that....?

(I'm using one ST as a sampler, another for sequencing. I would like to be
able to save both sequences and samples onto the same disk.)

Thanks,

john..

Have you tried using Splitter by Stuart Coates & Mark Matts? The source
code (in C) compiles on almost any machine: UNIX/ST/PC and can split files
and rejoin them on different machines very easily . The source and a GEM
based shell for the program is available on src.doc somewhere!

XHDI is the eXtended HardDisk Interface Standard which was defined in 1992.
Hard disk drivers that support XHDI offer a lot of useful functions for
getting information about the hard disks connected to your Atari and have
several calls which enable high level programs to communicate with hard
disks in a convenient way.
You find the complete XHDI documentation on ftp.uni-muenster.de in
pub/atari/Docs. The documentation is available in English and German.
Drivers supporting XHDI are HuSHI, hdpSTACK and HDDRIVER.

1048. Mega ST4 with SLM804 as PS printer

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-10 12:54:56 UTC
From: ruplit@iti.tu-graz.ac.at
Message-ID: <3jpi70$40h@fstgds15.tu-graz.ac.at>
Source record: 27211

I would like to use an ST4 with a laserprinter as a Postscript printer for a PC running FreeBSD. The idea is to run ghostscript on the Atari, connect it to the PC (serial or parallel) and pipe everything which comes in over the link into ghostscript.

Has anybody done this before? Is it possible to do this without hacking ghostscript to read the link directly?

The exact configuration is: an Atari Mega ST4 with an Atari Megafile 60 and an Atari laser printer SLM804.

Thanks,
Michael

1049. Mystery VME Ethernet card

Source record: 27227

I have just got a VME bus ethernet card from a dead x terminal, and was wondering if I could get it working in my (smartly, newly recased ;-) MSTE. Is there a standard way to access network cards (ie has someone already programmed something that I can get) or do I have to try and write my own driver. FYI it is a 1990 Network Computing Devices with transceiver and BNC.

If there isn't software already available, can someone point me in the right direction for info on programming VMEbus devices.

thanx

the hatter

You have neglected to remember that assembling the actual resource "image" for a popup or submenu requires a lot of code or a RCS! You see, it's just another tree amongst others. I'm sure you realize that constantly adjusting bits in objects within a program wastes code when all you need to do is set them in an RCS that supports the function.

I have found a pretty good program called "ORCS" which seems to do the job quite nicely.

Thank you for your assistance.

Rich

1054. HD Probs - HELP !!!!!!!!!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-10 17:43:50 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <03101995.174350@empyr.dircon.co.uk>
Source record: 27222

Hi,

I am putting together a HD system for a friend of mine, and I have just bought a used ICD Host Adaptor, and I cannot get it to work with my SCSI drive.

If you are still reading, thanks :-) I really need some advice on this, and would be very grateful for any suggestions anyone might have.

Setup

My system:
520STFM (2.5Mb), SM124 Mono Monitor, TOS 1.4
ICD AdSCSI+ host adaptor (which works fine)
Rodime RO3000T 105Mb embedded SCSI drive (also works fine)
The drive has been formatted with ICD driver v6.5.5, with partitions C: to I: (C: is 5Mb, the rest 16.7Mb)

The host adaptor I've just bought looks very similar to my AdSCSI+, complete with battery, but it is marked
'ICD.INC. ST HARD DRIVE ADAPTER BD' and 'p/n 90107, rev 2' and 's/n 9159'
The battery in it is dead, but when I put a fresh battery in it, it makes no difference to the symptoms.

It came with v3.41 of the ICD driver software.

Description of Problem

If I connect everything up, start the HD, start the ST with v3.41 driver in the floppy, the HD access light flickers once, the screen shows the driver version, then 'Clock Not Present - Aborted', but now the drive access light is permanently ON. (No sounds of head movement from the drive now)

I get a desktop up and run ICDFMT.PRG which eventually shows a screen that has '??????' in each of the HD data fields, 'NONE' in the 'Hard Drive' field, and the HD type selector has all its entries 'greyed out'.

Switching the HD off and on to kill the permanently on access light, make no difference to the screen.

Booting with v5.4.2 of the ICD software you get this :

The access light flickers once, as before. The light then comes on and stays ON. I get 'MSense :$FF' in the top right corner of the screen.

From the desktop, I run ICDFMT.PRG (the newer version), it says 'Scanning for SCSI devices' then 'No SCSI devices found'. The access light remains permanently ON. Now, if I turn the HD off and on again to reset the access light, then tell ICDFMT.PRG to Rescan, it finds the drive OK. Pressing 'Continue', it says 'Checking for previous format' and then displays the number of heads and cylinders. In the process, the access light comes on again and stays ON. Clicking on 'Partition' from here gives the message 'Unable to determine drive size'.

The only way I can get anything from the setup is to boot the HD with MY AdSCSI+ adaptor, then swap the host adaptors over, and then it will read the HD OK. I have tried connecting a small jumper on the drive, in case it was a parity selector, but it makes no difference.

Can anyone tell me what is going on ? Is the new host adaptor faulty ?

I had thought of backing up all my data and reformatting the drive with the new host adaptor, but that doesn't really appeal to me :-) In any case, I cannot get any of the software to correctly recognise the HD with the new adaptor. I *can* get as far as the FORMAT command, even if it cannot recognise the HD properly, but naturally I don't fancy clicking on 'OK' ! It's like a door really, if I reformat my drive, I might find the answer to the problem, BUT I may also have backed up / restored over 80Mb of data for nothing !!!

All answers very greatfully received !

Sorry for the length of this post, but I need it resolved fairly quickly and thought it would be better to give you every possible detail first.

MANY MANY thanks in advance,

Kevan@empyr.dircon.co.uk

1062. SC1224 pinouts and/or connector?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-11 02:23:47 UTC
From: Jeremy Haines <haines@zoo.cs.yale.edu>
Message-ID: <794888627@newsbase.cs.yale.edu>
Source record: 27234

Hi, I just picked up a used Atari SC1224, hoping that I could make an
add-on for it on my Jaguar A/V cable. I have all of the pinouts covered on the
Jaguar end, but I need the pinouts (and possibly a female SC1224 connector) in
order to make it happen. Can anyone give me a hand here? I heard that they
list the pinouts in the ST manual...thanks.
Oh, in case there are different standards (I know next to nothing about
ST's), the connector pins look like this:

. . . .
. . . .
. . . .
.

Oh, please reply in email, since I don't read this group regularly.

Thanks again.

If its doing speed tests - then make sure you are using a freshly formatted
disk. This way you will get optimal read/write performance.

When it comes down to comparing the Supra and USR Sportster modems, the Supra winds hands down on case and front panel display. Its only the lack of BABT approval that stopped me buying a 28.8 Supra. The 28.8 Sportster is apparently none to good anyway.

All IMHO of couse.

Yes - but not at the same time.

You might be able to hook up some sort of manual switch box - but I just switch the leads around (not while the machines are on of course).

If you want to be able to have both machines on at the same time and share it like that - then I don't think its possible. Most Atari SCSI host adaptors can't cope with having another computer on the SCSI bus AFAIK.

You could try networking the computers - but there isn't a really good solution to this yet.

Roland.

I know this subject is getting beaten to death, but I've got a question
that I can't seem to answer myself... Can someone tell me what settings
have given them the most success when using DRIVEIN and SCC .PRGs? I
keep getting ZModem re-positioning errors when doing uploads to various
local BBSs. I've confirmed that other callers have successfully ZModem-ed
files to these boards, so I can only presume I have my settings wrong.

Thanx!

1068. Fixing an SC1224 monitor

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-11 10:00:24 UTC
From: Peter_Epp@learnnet.nt.CA
Message-ID: <290506.ensmtp@learnnet.nt.ca>
Source record: 27235

A looooong time ago in a galaxy very near here, I posted a message asking for help on how to fix my Atari SC1224 monitor. The problem was that I hd busted the potentiometer that adjusts the V-Size setting in the back of the monitor. Someone replied, telling me that I needed a pot with a resistence of 470 Ohms. Well, I went to Radio Shack the next day, but as far as their lame tech support guy was concerned, there is no such thing as a 470 Ohm pot. The nearest he could find was 500 Ohms. I bought one but it doesn't work. When I turn on the screen with that pot installed, I get a everything condensed into one thick, bright line in the middle of the screen. If I flick my eyes up and down really fast while looking at it I get flashing glimpses of the whole picture. If anyone can help me find a 470 Ohm pot, I would really appreciate it. If not, I might be able to buy a new monitor. If I can't get one from someone around here, I'd be interested in hearing any offers anyone has. Buying a new one just seems so much simpler.

Thanks in Advance,

Pete

Hey folks i have a question, no idea if it is possible, but someo
let me know...

I own an atari st. (a 520 upped to 1 meg of memory) I also have
the atari st monitor, i forget the name. The color one with the round
plug. Anyways, since i am gifted to live in orlando, the lightning
capitol of the world, the monitor got zapped into oblivion. I opend it
it, poked around a bit, gave up and trashed it.

Anyways, i own 2 CGA monitors, an apple GS RGB moniotr, and a
commodore monitor. (the kind with color composite and RGB built it) can
any of these monitors be converted to be used for my atari ST? do they
sell adapters for that round plug sicket on my ST to be used with a 9 pin
RGB monitor? can it be done myself?

PLEASE, someo e-mail me with some answeres. i would owe you my
firstborn child...

thanks..

Ed Heffernan.

No just the type number, I have replaced 6 of these, and no problems with the
New Chips....

The new layout of the STE did not like the old DMA chips C025913-38
this must be replaced with a C398739-001A..

The BIG problem is that thier no more stock of these new DMA chips,
this I have not confirmed but was told to me...

I also here that Amiga users are having the same problem, stocks
are running out of problem IC's...

1079. Hardware problem.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-12 13:07:00 UTC
From: Radoikovich.Nenos@adlib.centron.com
Message-ID: <e68_9503180747@centron.com>
Source record: 27102

Hello Mr. All :-)

Dear somebody i realy need help !!!

I have a hardware problem that goes like this :

I have an AT-Once Plus PC emulator card for about 2-3 years and
everything
was just fine until i decided to by a TOS 2.06 card with a hardware
switcher and the most important an AT-Bus socket that exepts common
PC's AT-Bus hard disk drive, so i went out and bought a 260MB 3.1/2 inc.
hard disk, and here is were the problem arise... the hard disk works just

fine and so does the AT-Once but the AT-Once does not recognaise the
hard disk.

Some tech stuff... the TOS card as well as AT-Once fits on the CPU
this is acomplished as the TOS card has a thru socket made just for
such cases as AT-Once and other emulators and accelerators.

I think that the hard disk works in a similar way (if not exactly the
same)
as on the MEGA STE, i have a STFM (1MB).

Is there something that can be done ?

(P.S. this is a mail from Greece :-) only English answers please)

Friendly Nenos.

From: hallvart@oslonett.no
Message-ID: <3jvv0m$r4h@hasle.oslonett.no>
Source record: 27103

I'm a bit confused about the pinout of the WD1772 disk controller chip in my STE. I'm in the midst of figuring out how to make a high density detect circuit, and for that I need to know which pin is the clock input.

I read in an article in "ST Format" that it was pin no.8, but from an (unclear) copy it seems like it's pin no.18 instead. Fill me in someone- which pin is it? And while I'm at it, does anyone know if pin 22 of the ribbon controller is standardized as containing the density detect signal?

I'm using a Sony MPF 520-1 disk drive now which is a high density type, but for the moment I'm only running it in 720K mode since I haven't yet made the detect circuit. has anyone been using this drive before? I need some tips concerning pinouts and stuff.
Thanks.

1085. Euro STE with USA TV?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-12 23:13:01 UTC
From: hallvart@oslonett.no
Message-ID: <3jvv5t$rc4@hasle.oslonett.no>
Source record: 27104

is it possible to use a European STE in the United States with an
NTSC television?
I'm just wondering, since I might move over to the US, and bring my STE
with me which of course has PAL output?
I'm open for any suggestion, like using the monitor output/external RF
modulator or something.

Hallvard

1086. SC1224 pinouts?

Source record: 27105

I need the pinouts for the SC1224 cable on fairly short order,
and I hear that they are listed in the ST manual. I don't have an ST, so
could someone PLEASE mail me the pinouts? It would make me very happy.
Thank you...

Okay.

>The new layout of the STE did not like the old DMA chips C025913-38
>this must be replaced with a C398739-001A..

Okay, that makes sense. The chip in the machine is a C025913-38. The confusing thing is though, that I have another chip with the same number here that I understand came from an STE that ran a hard-drive without any problem! Would it be safe to assume that I could put his one in and everything would be okay??

>The BIG problem is that thier no more stock of these new DMA chips,
>this I have not confirmed but was told to me...

Hmm okay. Anyone out there know of any good sources for the newer DMA chips??

Actually the most awkward problem I probably have, is that the DMA chip is not in a socket but surface mounted on the board. Removing it and replacing with a socket is rather fiddly and my own soldering skills are not really up to the job. :-((

Another question for any Gurus out there. It strikes me that the DMA problem must be related to the chip heating up, or there would be errors immeadiately you booted, not just after an hour or so. A friend suggested therefore that maybe a mini cooling fan (like those for processor chips) on top of the chip my be a kludgy but effective fix!! Any comments??

I recently installed VI.PRG (screen enhancer) to give my Falcon a larger visible screen. Hoever the screen now flickers quite badly.

Is their any way to fix it?

System: f030 with Colour SVGA (interlace).

I beleive there is some kind of hardware upgrade to aviod this problem?

Rod

The OZZY firm Sibnet Elect had some a year or so back Phone (02) 417 7600 or Fax (02) 417 1280 about $32a from memory....

If they don't have any then kiss your Atari good bye...

>Actually the most awkward problem I probably have, is that the DMA chip
>is not in a socket but surface mounted on the board. Removing it and
>replacing with a socket is rather fiddly and my own soldering skills are
>not really up to the job. :-((

They are all like that, its not Surface mounted, if it was you would never ever replace it...

I have allways fitted a AMP brand socket on all the ones that I have replaced..

So you coulds allways send it to me...:-)

>Another question for any Gurus out there. It strikes me that the DMA

>Any comments??

All Silicon is affected by heat, the input threasholded gets changed
so it can now see the noise...

Well that is my theory and I am sticking to it...

Some people here seem to think that fitting a very old C025913-38
will work but I have never tried it.....

You will have to write you own driver. And you shouldn't be too sure that
the card runs with the STE at all.

>If there isn't software already available, can someone point me in the right
>direction for info on programming VMEbus devices.

Take a look at the TUWIEN TCP/IP package on fortec.tuwien.ac.at. The package
contains sources and binaries for ethernet pocket adapters and the Riebel
VME ethernet card.

|> It's not a very loud crackle, just noticable enough to be annoying.

Aha !! You must have a MegaSTE. Do high-colour graphic modes like Spectrum 512 and Photochrome 'wobble' and display horrible horizontal streaks across the screen ? Apparently the cause is the GST shifter. The dodgy one is C301712-001, which I have confirmed as fitted in mine by taking a peek inside, and the good one is C300588-001. I have mailed System Solutions about a replacement, and they
say they are checking stocks.

I know what you mean, it's bloody annoying. If you can run the thing at 16MHz that
seems to fix the sound problem a bit, but some demos don't like it.

There was one other guy who had this problem a while back, and I thought I was the
only one in the world... now I know there are at least three !

I am deseperatly looking for informations on the Ethernet RiebelCard.
This card was made in Germany (I think) and can be plugged into a MegaST
computer (a different version exists for the VME but I only have a MegaST)

What I am looking for : the names of the chips used (Ethernet controller,
Ram used, etc...), the different addresses of the card, the way the Ethernet
number is stored, is there a private memory (is so, how much) or is there a
DMA access made.

If anyone can help me, he will be welcomed.

Thank you.

From: buxmjp@zippy.dct.ac.uk
Message-ID: <1995Mar13.123833.12906@zippy.dct.ac.uk>
Source record: 27114

Do any of the jumper pins on a Mega STE circuit board connect to the reset switch ? I have my machine in a pc case, but I have to power cycle the machine for any program that disables control-alt-delete. If nothing else, this doesn't do much for the hard disk. If not, then I figure I may as well desolder the old switch, but this makes removing the circuit board a pain.

I am also thnking of starting up a recasing FAQ if anyone has anything to add

thanx

the hatter

From: bericd@bri.hp.com
Message-ID: <D5Dwxw.JvC@bri.hp.com>
Source record: 27120

Hi All,

Does anyone see any reason why a VME bus could not be added to an Atari ST (With PAK/3 board) ?

I am NOT talking about an out of the box module - but quite an extensive hack :)

If anyone has any details of the VME implementation on the MSTE could you let me know what it is used for and is it worth it or not. Having seen details in a book about it I guess it would not be TOO difficult for a technically competant with a bit of test gear to undertake.

Any views would be appreciated.

Beric..

Come again? Have you recently bought and tested on of the newer models? Didn't think so. The Barracuda series is fast. Way faster than anything our Atari could make use of.

>are), but my Maxtor 213s will not. It must be SCSI-1 and not Fast SCSI-2, and

NOT. SCSI-II is downwards compatible to SCSI-I, and therefore those drives work well on the ST. SCSI-II is mainly a matter of software, using the special features of it.

Both my LPS 270S and the new SyQuest SQ3270S are SCSI-II. And the SQ gives me a higher X-ferrate than the Quantum ;-)

>parity must be disabled (which means most Quantum drives won't work, because
>they require parity to be disabled in software - with a host adapter that

Some drives, i. e. the LPS-series, do have the ProductOptions-jumper, but some firmware versions had a bug and didn't recognise the status of that jumper at all.

1107. HD+TopLink+M-ST1 Problem

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-13 18:49:54 UTC
From: Antoine Martin <am14@doc.ic.ac.uk>
Message-ID: <3k244i$ep9@frigate.doc.ic.ac.uk>
Source record: 27136

I can't format my QUANTUM ELS127S from my Mega-ST1 using the TopLink adaptor.
Here is what works:
_ The drive (I've been using it on PCs/MACs/FALCONs, it has been formated/partitionned many times without any problem). It doesn't have any bad sector.
_ The Mega-ST1 seems to work, at least with floppies.
Here is the problem:
I can't run programs from the hard-drive (formated with my falcon), programs crash, files written are corrupted (they appear in the directory but their contents is usually corrupted: cross linked files wrong file size, the FAT is usually a mess after a few write attempts)
So i decided to reformat the Hard drive with HDX 5.xx (last version) but it says "Cannot format... Check connections" (Of course connections are OK, I have tried with and without terminator).
Then i took scsitool and tried to format it again: the format process works but when it gets to the partitionning the program gives an error (something like sector -1...).
Then i tried to read the previous partitions i had (i thought this wouldn't work as the drive was supposed to be formatted) and it worked... The files and directories were still there. Tough.
It looks like the drive refuses to format !
My question is: Where does this come from ?
Could it be the toplink adaptor ?
"It's only mistery and i like it...", I Don't.
I need to use this machine for my work !
Any help appreciated.

1108. Supra Express series modem question

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-13 19:03:20 UTC
From: ai066@FreeNet.Carleton.CA
Message-ID: <D5E7LL.H1K@freenet.carleton.ca>
Source record: 27127

Supra has a new, low-cost 14.4k fax/data modem, called the express series. Supra manages to save some cash by eliminating th external Power supply. Instead, the moem connects in series with the mac, or IBM keyboard connector.

Could some hack be done to allow the Mste internal power supply to drive the modem? What voltage is an IBm keyboard (+5?). Is the mega Ste keyboard running at the same voltage, and could an approipriate adapter be constructed to power the modem? (they are retailing at $138 CA, which is $30 cheaper than the next best deal I could find on an external 14.4k fax/data modem). Also, if this were done, could the Power supply on the Mste handle the extra load?

Thanks!

I don`t know about Zoom, but the statement about USR is not correct.
USR makes great modems and I can highly recommend their Courier-
line.

1110. XtraRAM Upgrade

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-13 22:14:01 UTC
From: nickf@cadence.com
Message-ID: <NICKF.95Mar13141401@fleet.cadence.com>
Source record: 27119

I'm looking for a little info. about the Marpet XtraRAM kit for an STFM...

I have one of the above installed and its populated to 2Mb. It's the board with the fixed DRAM devices, not the one which uses SIMMS. From memory (I haven't opened my ST recently) I seem to recall that the PCB has slots for additional devices. Could someone tell me, is it simply a case of adding these to upgrade the board to 4Mb. or is some extra work required.

If I can simply upgrade this board has anyone any suggestions as to where I can obtain the appropriate DRAM devices (preferably in the U.K.)?

Any advice about this would be really appreciated.

Thanks in advance.

Nick.

HDDRIVER & HuSHI are (not sure about hdpSTACK).
You can use Atari's AHDI with Minixfs (I have a 115 meg partition), which
should be available in umich.

AHDI is not a good as the above drivers though, they allow features like
bigger (>128 Meg on TOS 1.04) They are still supported & updated, which is
a big plus.

Does anyone have an idea if is it possible to connect F030 to Internet via LAN port and how to do that? In my mind it is possible. I just have to find system connected to Internet with the LAN port and with apriopriate software (comm protocols for LAN). Then I have to look for the same software for my F030 and I' at home (I meen in Internet :). Can anyone tell me something about this problem?

regards,

Simon.

If it works and will allow IDE access maybe you could upload it somewhere for all those of unable to compile a kernel or use one of the existing ones. I myself cannot get any kernel which like my IDE drive.

From: pd@mole.bio.cam.ac.uk
Message-ID: <3k3pqm$b9j@lyra.csx.cam.ac.uk>
Source record: 27131

I have a STFM with TOS 1.4 and a Mega ST with TOS 1.2. I know TOS comes
on either 2 or 6 chips, but I haven't looked at what these two have yet.

Is it possible to just swap the chips over?
Do they have to have the same number of chips?
Anything else I should know before I try it? :)

Thanks for any help,
Phil

: modulator or something.

: Hallvard

Probably not. NTSC uses 60 fields per second interlaced, each field with 212.5 lines, for a total of 525 scan lines. PAL, uses 50 fields per second interlaced, each field with 300 scan lines, for a total of 600 scan lines. Also, PAL uses a higher colorburst frequency. So, you MAY get your video on the TV, provided it has a high tolerance for verticle frequencies. However, you will NEVER get color on it. My suggestion to you is to purchase a color monitor. It will work. OR! Bring a PAL TV set with you to use as a monitor. You can pick up a 120 to 220 volt adapter at most stores, including Radio Shack (same as Tandy Electronics).

If you choose to use a US TV, then get a utility to change the verticle frequency of your computer to 60Hz. That will make the PAL signal easier to cope with on a NTSC television, but still only in black and white.

Good luck!

Rich

Now, by the sound of it, I am using a similar setup to John with separate sampler ST and sequencer and was intending on getting MIDINET from System Solutions - using parallel ports as the connections.
Are you saying that this will not provide a satisfactory 'network' for accessing one drive between 2 computers or hadn't you heard of MIDINET??

> Roland.
>
> @ciX

Midinet is supposed to connect via serial parallel or MIDI and connect several ataris for around 50 If anyone can shed more light on midinet I would be very grateful as it MAY solve many problems.

Hi Hallvard

I have the same interface and a IDE HD but its running off a STFM.
Ive tryed to get it to work on my STE but the STE only will except SSCI.
Ill be very careful as you have to muck around with the MMU and the TOS
which could stuff you STE up for good.
The best bet would be yo go for a SSCI with the HOST apt.
I would not go for IDE as you cant run a CD ROM off it and tape drive.
I hope this helps you,best of luck.

No idea. TOS 2.06 doesn't need HD-detect. It tries with 8 mhz and if this
fails, switches to 16 mhz.

So AHDI supports the XHDI specification? If I recall correctly the XHDI spec
indicate that there should be a 'XHDI' cookie, which I do not get using AHDI.

>they require parity to be disabled in software - with a host adapter that
>supports parity).

I guess that rules out large capacity drives.. they're typically
SCSI2. I think my Maxtor 345 is a SCSI1.. it's pretty old.
Unfortunately, I can't take as many drives home to play with and
evaluate on my system as I'd like to. And it's mighty tempting to
check out a Baracuda. They're quite fast!

I've been hoping someone would develop a replacement internal host
adapter for the Mega STe with a couple meg of caching and support for
SCSI2 or WideSCSI. At LEAST it should support multiple drives.. which
I understand is not possible with the internal adapter.

When I moved here from the UK, I brought along my old 520ST - although I no
longer use it (replaced by a Mega & an STe), it will almost work...

Limitations are: No sound output via the TV you are using.
: Picture rolls (unless said TV has a vertical hold and)
: (not the modern auto-tuning.)
: No color - output is black and white (shades).

As you can see, its a pain, but it does work and once you are here you can
pick up a used SC1224 or SM124 for around $50 via this network! :)

There may be a way to solve these problems, but the monitor is by far the
best solution, and the picture is *SO* much better.

Cheers, Andy

1128. Monitor & Jag (III)

Source record: 27162
Cross-posted to: rec.games.video.atari,comp.sys.atari.st,comp.sys.atari.st.tech

Thanks for all of the responses to my last message...I now have a
cable between the SC1224 and the Jaguar that MOSTLY works. I was hoping
that I could get some advice about fixing these two problems:

o The monitor needs Hsync and Vsync inputs, but the Jaguar only
seems to have Hsync and composite sync outputs. With the
Hsyncs attached to each other, and the Jaguar's Csync
attached to the monitor's Vsync, I get a decent picture, but
I have to stabilize the Vhold every time I turn the Jaguar
off and on again. Any way to handle this?

o The audio in the monitor works fine, until I attach the video
portion...then the sound stops. Can't figure this one
out...I have the audio and audio ground lines attached
appropriately...the Jaguar doesn't cut off audio output when
a monitor is attached, does it?

Also, the current picture is pretty dark, though I hear that the
older SC1224's have dark pictures in general...any way to fix that?

Thanks in advance...and please respond to me in email.

With big partitions under Minix you might need an XHDI compatible hard disk
driver like HuSHI or HDDRIVER. There is some information about this in the
MiNT documentation. Didn't you read this yet?

I once hooked up an Amiga monitor with the RGB/Composite ports to
a 1040STF. Going by the RGB pinouts, everything worked out fine.
Everyonce in a while, the vert-sync would get out of sync though.

Some ST computers have the capability to send the audio/video
to a composite monitor. Might not look to clear, but a whole
lot easier to connect.

1132. [Q} Which CD-ROM allows reading Audio-CD's over SCSI?

Newsgroup: comp.sys.atari.st.tech

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I recently read somewhere that some CD-ROM players allow reading audio-CD data digitally through the SCSI interface. I couldn't find an answer in the FAQ, so maybe someone out here knows
- which CD-ROM players allow this (and also allow Photo-CD reading, and is dual -- maybe even quadruple -- speed).
- the drive should be external (and SCSI off course): or is there an easy way to install an internal, or even IDE, CD-ROM to a Falcon (can you convert IDE to SCSI?)
- which driver I need for this on my Falcon 4/65
- how much I should expect to pay for the drive...
I realize, quite a lot of questions. If you have answers to some of them, it would help me lot.

Thanks in advance,

JaHe

Actually, I was confirming the use of AHDI with Minixfs, I did not mean to
imply that AHDI supports XHDI. I believe AHDI came out well before XHDI.

As there are probably no more official releases of AHDI on the way from
Atari Corp, it would make sense to use a newer hard disk driver to get
more features
and the XHDI drivers sure provide these.

On my spare 1040STf, I have hard drive write problems. I tried moving the DMA chips from a good ST to the bad in an effort to troubleshoot.

With the "good" chips installed onto the "bad" motherboard, I still had write problems. The "bad" ST would work fine for around fifteen minutes then the write errors would kick in. I would have to powerdown the "bad" ST for around 30 minutes for it to write.

Don't know if the information is any help at all, but it sounded related. The write problems started at the same time I installed a "tweety" sound board many years back. Since the machine became unreliable, it and the sound board have been packed up in a closet ever since. The sound board piggybacked onto the Yamaha YM2149F chip. Even though the sound functions worked fine on the closeted ST, you might want to check that chip and any related circuitry?

I've done it. I soldered in a socket and I think that's the best way. I had to get 2 chips before I could make it work and, boy, was I glade to have a socket!

In my case the problem was there even if the computer was started the first time for the day (cool) so I don't think a fan will help. But then again, that's how it was for me.

1139. 1772/AJAX

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-15 13:03:21 UTC
From: stl@sn2.ee.umist.ac.uk
Message-ID: <3k6oip$pe0@yama.mcc.ac.uk>
Source record: 27155

Hi,

I have to replace a 1772 disk controller on a machine (not ST), but these
aren't available.

I've heard about the Atari AJAX device, and so I've thought about
replacing the 1772 with one of these, so I have a couple of questions.

Is the Ajax a direct replacement for the 1772?
Are there any compatability problems (ie will AJAX only do certain formats
whereas the 1772 is more controllable?)
What price am I likely to pay for one?
Where can I get data sheets?
Who's likely to be a good supplier for a one-off?

Many thanks,

Stuart.

There is an easy way to use internal devices with the Falcon, although you cannot have them inside the Falcon. I use a separate mini-tower case to hold my SCSI devices--you can pack in whatever you wish: HD, CD-ROM, tape backup, etc.. You only have 1 cable running to the tower case (SCSI cable), and of course the tower case has an internal power supply for all devices.

There is now an internal Screenblaster (from Compo) which is cheaper than the external version BUT it involves soldering. The only other hardware upgrade I know of involves adding an accelerator board, I can't remember the name, but it's sold in Germany and it involves at least 2 hours of work to install, even if you know what you're doing.

1150. STE :Printer Port Problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-16 04:55:26 UTC
From: dac@pta.pyramid.com.au
Message-ID: <3k8gbu$4q3@pta.pyramid.com.au>
Source record: 27176

Hi Folks,
I've been trying to get a printer going on my STE but with
little success. The printer is an Apple Imagewriter and I know the connections
are fine as my breakout box tell me so :) The question I guess then is
Has any one ever used and Imagewriter on an Atari? Do they work together?

I am under the impression that the Atari is 7 bit on the printer output whilst
the Imagewriter wants 8. Could someone confirm this for me!!! Perhaps post
a spec on the port.

Cheers,
David, All I wanna do is print a little some, Clark

HT>standardized as containing the density detect signal?

FDC:
GND - 14
VCC - 15
CLK - 18

You should not need other signals from the FDC, only (maybe) the drive select
lines from the PSG.

If you mean the ribbon cable (not controller), then pin 2 is usually used for
the HD-Signal. Beware that there are some drives which will drive the HD line
no matter if they are seected via DS or not.

cu

Best Electronics in California, or (possibly) Toad Computers in Maryland. Be
prepared to pay around $90 if you get the Best power supply.

DA> Also, can someone tell me what each of the pins (6 of them i believe)
DA> are for? (specs in case i have to build a replacement ..)

Hang on a moment... Well, no. Not at the moment. You do need a PS with +5v
and +12v, and that's all. There are 2 leads for +5v, I think, 3 for ground,
and 1 for +12v. The black leads are definitely ground. <G> I think the red
ones are +5 and the blue one is +12, but you'd better be SURE before you hook
anything up.

1160. ANSI/VT100 Codes

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-16 21:46:38 UTC
From: Rich.Tietjens@f6969.n106.z1.fidonet.org
Message-ID: <d04_9503170931@sherwd.fidonet.org>
Source record: 27044

APPENDIX H - ANSI-BBS ESCAPE CODES

Due to the structural differences between the screen of a PC and that of an ST, the Ansi driver in QuickBBS ST has some 'differences'...

A PC with CGA monitor can display 8 colours for foreground and 8 colours for background, whereas the ST can only display 4 each on a colour monitor. See the 'change attributes' escape sequence to see how Quick handles colours.

A PC can underline, highlight, blink and reverse text. An ST using BIOS/GEMDOS for output can only use reverse. See the 'change attributes' escape sequence.

I have not found any way of changing the scroll region X, Y, and Width for TOS output.

All escape sequences that QuickBBS ST doesn't know will be ignored. They will be sent to the user on-line.

The implementation in QuickBBS ST also has some escape sequences not found in ANSI.SYS (the Ansi driver on a PC), but which are part of X3.64, or frequently used by Unix machines.

QuickBBS ST recognises and reacts to the following escape sequences. All characters in <brackets> should be replaced, and spaces should be removed...

Name : CUU - Cursor Up
Escape : <ESC> [<n> A
Example : <ESC> [5 A

This sequence moves the cursor up <n> lines. If parameter <n> is omitted, the cursor moves up one line. The cursor will not move off the screen, nor will the screen scroll down. The cursor remains on the same column.

Name : CUD - Cursor Down
Escape : <ESC> [<n> B
Example : <ESC> [3 B

CUD is the same as CUU (cursor up), but the cursor is moved down instead.

Name : CUF - Cursor Forward (right)
Escape : <ESC> [<n> C
Example : <ESC> [8 C

This moves the cursor <n> columns to the right. If the cursor
reaches column 80, it will stay there. The cursor remains on the
same line. If <n> is omitted, the cursor moves one column.

Name : CUB - Cursor Backward (left)
Escape : <ESC> [<n> D
Example : <ESC> [7 D

Is identical to CUF (cursor forward), except that the cursor is
moved to the left, as far as the left hand side of the screen.

Name : CUP - Cursor Position
Escape : <ESC> [<y> ; <x> H
Example : <ESC> [10 ; 20 H

This escape moves the cursor to location (x,y), where X is between
1 and 80, and Y between 1 and 24. If <y> and <x> are omitted, the
cursor is moved to the top left-hand corner (1,1). The sequences

<ESC> [<y> ; <x> H
<ESC> [<y> ; <x> f
<ESC> [<y> ; <x> j

are identical, but the first is recommended.

Name : SCP - Save Cursor Position
Escape : <ESC> [s

SCP tells the Ansi driver to note down the current cursor position
for future use. If an RCP is received the cursor will be returned
to this position. The SCP and RCP escapes are not nestable.

Name : RCP - Restore Cursor Position
Escape : <ESC> [u

RCP places the cursor at the location noted down by SCP.

Name : ED - Erase Display
Escape : <ESC> [<n> J
Example : <ESC> [2 J

ED erases all or part of the screen depending on the parameter <n>.
If this parameter is omitted, it is assumed to be '0'...

<n> = 0 : The screen is erased between the current cursor
location and the lower right corner of the screen,
inclusive. The cursor doesn't move.
<n> = 1 : The screen is erased between the upper left corner
of the screen and the current cursor location,
inclusive. The cursor doesn't move.
<n> = 2 : The whole screen is erased and the cursor is moved
to the upper left corner.

The screen is cleared using the current background colour.

Name : EL - Erase Line
Escape : <ESC> [<n> K
Example : <ESC> [0 K

All or part of the current line is erased, depending on parameter <n>. The cursor is never moved by this escape. If <n> is omitted, it is assumed to be '0'...

<n> = 0 : All characters to the right of the cursor are erased.
<n> = 1 : All characters to the left of the cursor are erased.
<n> = 2 : All characters on the current line are erased.

The line is cleared using the current background colour.

Name : IL - Insert Lines
Escape : <ESC> [<n> L
Example : <ESC> [3 L

IL inserts <n> lines at the current cursor location. The current line and all lines below it are moved down. Lines at the bottom of the screen will be lost. If <n> is omitted, one line is inserted. The cursor doesn't move. The new line will be displayed in the current background colour.

Name : DL - Delete Lines
Escape : <ESC> [<n> M
Example : <ESC> [9 M

DL deletes <n> lines, starting with the current cursor line. All lines underneath the line(s) to be deleted will be moved up. New lines, in the current background colour, will appear at the bottom of the screen. The cursor doesn't move.

Name : DECSC - DEC Private, Save Cursor Parameters
Escape : <ESC> 7

This is supposed to be a DEC Private escape, but is used on other systems as well. It saves the current cursor position (like SCP), but also stores the current text attributes and colours. With DECRC these parameters can be restored. This is not implemented in ANSI.SYS!!!

Name : DECRC - DEC Private, Restore Cursor Parameters
Escape : <ESC> 8

DECRC is the opposite of DECSC, and restores the saved cursor parameters. This is not implemented in ANSI.SYS!!!

Name : RIS - Reset to Initial State
Escape : <ESC> c

This 'resets' the Ansi driver: the colours are set to default values, all text attributes are switched off and the screen is cleared. It is the same as doing an SGR 0 followed by ED 2. This is not implemented in ANSI.SYS!!!

Name : NEL - Next Line
Escape : <ESC> E

This moves the cursor to the first position on the next line,
scrolling the screen up if necessary. It is effectively the same as
Carriage Return followed by Line Feed, and is not implemented in
ANSI.SYS!!!

Name : SGR - Set Graphics Rendition
Escape : <ESC> [<n> ; <n> ; ... ; <n> m
Example : <ESC> [1 ; 37 m

Now this is the good stuff... With this escape you can control
three things:

The text foreground colour,
The text background colour,
The text attributes.

There can be any number of parameters, separated by ';' characters.
The effect is cumulative. If no parameters are passed, '0' is
assumed. The following parameters are available:

0 Reset colours and attributes
1 Bold (*)
4 Underlined (*)
5 Blink (*)
7 Reverse Video

30 Foreground Black
31 Foreground Red
32 Foreground Green
33 Foreground Yellow
34 Foreground Blue
35 Foreground Magenta
36 Foreground Cyan
37 Foreground White

40 to 47 Background Colours

Attributes marked by (*) are ignored by Quick. When running on a
monochrome monitor the colours are also ignored. On a colour
monitor colour 30 is black (register 0), colour 37 is white
(register 3), and all colours inbetween are alternated Blue
(register 1) and Red (register 2). Of course this depends on your
screen settings, but the above are the QuickBBS defaults. If
foreground and background turn out to be the same, Quick will
adjust the background colour.

Some examples...

Bold, White on Blue : <ESC>[0;1;37;44m
Blink, Red on Yellow : <ESC>[0;5;31;43m
Normal, White on Black : <ESC>[m or <ESC>[0m
Bold, Underlined, Green : <ESC>[0;1;4;32m

Note that setting - say - Bold does not effect any of the other attributes, nor the colours. To make sure you've got the right mode, you could add a '0' at the beginning, but that depends on how intelligent your Ansi editor is.

You can create your Ansi screens in a number of different ways. The hardest way is to do it all in a text editor like Tempus or the capture buffer in Flash. This is lots of hard work, and you can't get many fancy effects this way.

The most expensive method is to buy a PC and use an editor like TheDraw. These editors have lots of nice options to do stuff like animation.

The simplest is to create your screens in a VT-52 editor and convert them to Ansi using the QANSI program, available from our Support BBS. You just specify the input VT-52 file, and your Ansi file is ready to use! The only limitation is: QANSI can't handle more than one screen at a time.

Perhaps someone has time to write a good VT-52 and Ansi editor for the ST? It's about time we had something we can work with!

Hi, I have some info on the riebel card at my work. I'll dig it up tomorrow.
You should contact TU-Wien, their tuw122 package uses this card and / or a
DE600 with a little piece of hardware on the ROM port. As far as I recall
there is a standard AMD LANCE chip on th card and 64K dual ported RAM.
I cannot post to Usenet from my work. I'll Email you. Please remind me if you
have not heard from me in a week, Stephane.

I have a Seagate ST5660N 540Meg drive fitted to MSTE it's not the fastest but
at 1360 k/s transfer rate it's not what you could call slow...

: >parity must be disabled (which means most Quantum drives won't work,because
: >they require parity to be disabled in software - with a host adapter that
: >supports parity).

As for Quantum drives, I am lead to believe that if you have access to a
ICD+ host adaptor, TT or a Falcon, the parity can be disabled (via software
supplied by ICD) and then it will work on the MSTE.. I have not tried this
but oters have and now use large Quantum drives in there MSTE

<snip, snip>

: I've been hoping someone would develop a replacement internal host
: adapter for the Mega STe with a couple meg of caching and support for
: SCSI2 or WideSCSI. At LEAST it should support multiple drives.. which
: I understand is not possible with the internal adapter.

I'm also hoping, although due to the limited amount of MSTE's on the market, I
don't think it will happen

Hello everyone,

I am a hardware builder, i like to build things for my system, and
i was wondering if anyone out there has made a 32 pin simm converter,
that allows you to daisy-chain simms together, I.E. 4 256k simms into
the only simm slot in your system. anyways, i was wondering if there is
anything in proof on how to do that,

Also...

I was wondering how the pinout conversion goes for 72 pin, to 32pinn
simm conversion..

Thank you.

Please e-mail any responces back.

1169. Swap partition for Linux: How??

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-17 10:00:48 UTC
From: psherwoo@jpmorgan.com
Message-ID: <3kbmkg$90n@archive.ny.jpmorgan.com>
Source record: 27182

Hello Linux/68k'ers...

I have spent the last few days getting Linux up and running on
my Falcon. Although it is a bit fiddly I finally got everything
installed and running nicely - very impressive.

Things started to go horribly wrong when I tried to compile a
new kernel - I ran out of memory (I only have 4 megs).

"Aha", I thought, "no problem - Linux has virtual memory!"

I created a swap partition using 'mkswap', did a 'swapon -a',
and hey presto - heaps of memory and plenty of space to compile.
My happiness was short lived: next time I rebooted I got a pretty
little row of bombs when the disk driver started.

Browsing through the documentation revealed my error: a swap
partition must be of a type not recognised by GEMDOS, such as
LNX or SWP or something. Now I come to the embarrassing part:
I have no idea how to do this.

I have HDDRIVER 3.06 and the HDX which came with my Falcon but
neither seems to have an option for setting the partition types.

Help! I would really like to get Linux swapping happily so could
some kind soul please put me out of my misery.

Thanks in advance,

Piers

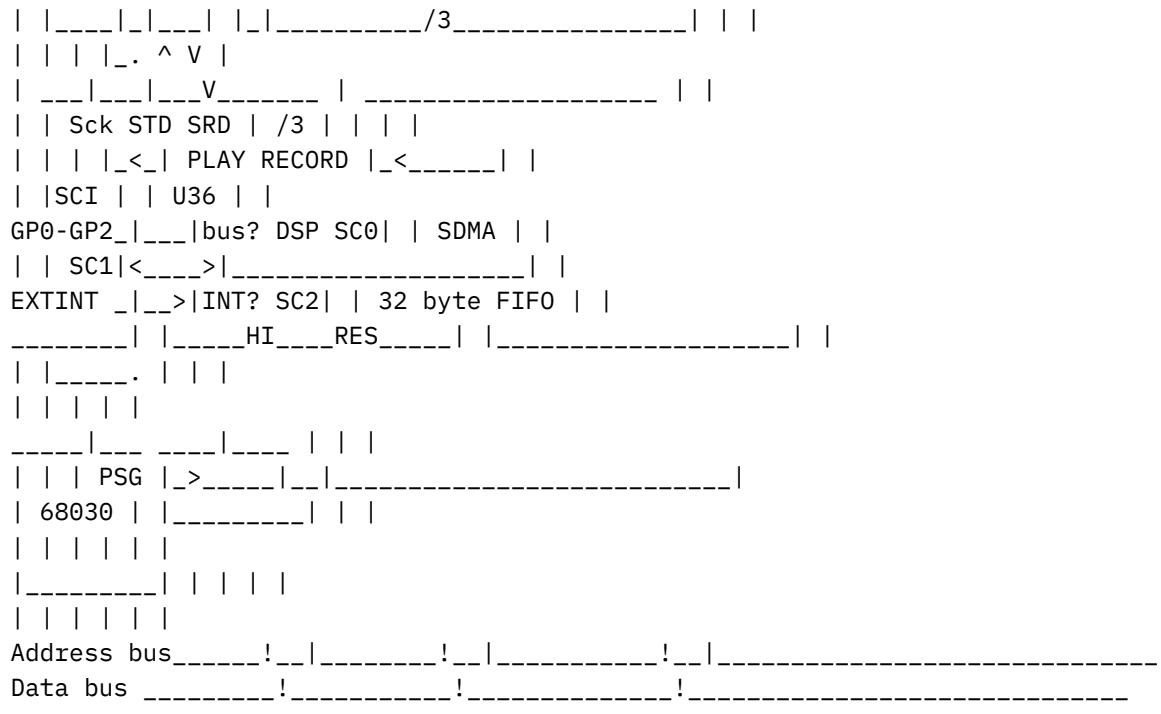
1171. Falcon audio subsystem

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-17 14:02:35 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Mar17.140236.177@genrad.co.uk>
Source record: 27041



I've spent the last few weeks trying to get a clear idea of how the Falcon's sound system is all hooked up. With only scraps of documentation from various sources, the best I have managed is shown in the (terrible ASCII) diagram below. It is more understandable when printed out, and gone over with a pencil!

I hope this is of some use to others. However, it is only my assum-ptions, and so could be wrong. If anyone has any information to contradict any part of the diagram, or parts to add, please edit the file, add your bit and repost it. This way everyone can have the most up to data diagram possible. After a few weeks or months, maybe this could be converted into a Falcon FAQ, with all the memory addresses that control the hardware added. I can add some of these addresses, but for now, I'm just posting the diagram.

Thanks for all of your help.

Hallo Ihr,
ich benutzte einen ICD-Host Adapter und eine Seagate SG157N Platte bisher ohne Probleme. Nun habe ich zusaetzlich eine Seagate SG1096N eingebaut. Die Jumper sind so gezetzt, dass die SG157N id0 hat, und die SG1096N id1 haben sollte.
Die Widerstandsbloecke habe ich an der SG1096N entfernt, und durch vielfaeltiges Testen einen Fehler am Anschlusskabel fast ausgeschlossen. Nun benutze ich das Programm ICDCHECK mit dem SCSI Geraete gesucht werden. Dieses Programm findet allerdings nur die SG157N.
Wer kann mir weiterhelfen ?
email an kaleschke@awi-bremerhaven.de

1173. TT Monitor Output Frequencies

Unless you have actually changed the mechanism, be aware that that Atari SF354 disk drives were SINGLE sided (360K) units. The double-sided (720K) job was the SF314. Maybe that's what you meant.

IMHO, $100 for an SF314 is a bit on the high side; but for an SF354 it's waaaay too expensive. But then again, you might get lucky. :)

Well I just got a compiled version of patch level 5 from ftp.cnam.fr and
it has worked perfectly for me up to now it even works with falcon scsi
and ide !
I am running it on a non souped up falcon really apart form the
co-pro and an external gig Hdd the rest of the machine is exactly the same

I've been trying to install linux, but without any success. I've tried with both vmlinux0.9pl4#? and vmlinux0.9pl5#3.

I start the bootstrap progrma with -d -k vmlinux -r m:\file-sys.new and everytime linux hangs right after the partioncheck. When I use version 0.9pl5 it also says:
HD-controller reset
Kernel panic: Trying to write bad sector
In swapper task - not syncing

and then it hangs.

I have a Falcon 030 4mb ram and an AREAL 170 ide drive. Could it be that this ide drive isn't supported? Any help would be very appreciated.

>
Wayne,

Your absolutely right. I stand corrected. My experiences with USR cover the course of three months. I purchased a USR Sportster 28.8. it continualy hung up after a minute or two no matter where I called or at what speed. I asked around and was told by at least three sources that this was a real problem and that the cause for this problem was due to a faulty PROM chip (it was or course faulty programming ON the chip.) I called USR, they knew nothing about it, but refered me to another number to call. I called that one...and on and on until after a full page of notes and several phone numbers, I found a department that knew what I was dealing with. They offered to replace the PROM for no charge. I requested one be sent to me and it was...THREE MONTHS LATER. That is just the beginning! When I got the chip, I put it in the modem (really easy) and then attempted to use it. At first it seemed to work but in the end it was only marginaly better. I then called USR again. They informed me that the chip I got was "almost" fixed but it still had a bug. They offered to send me another one...No thanks. During the three months that I waited for this chip I had returned my modem to the shop I bought it at and replaced it with another one...three times. In each case I allowed a "new shipment" of these modems to come in so I wouldn't be dealing with the same "bad batch". I had the third one in my possession when the chip came in...and it didn't work. So, I took the damn thing back to the shop, chip installed and all, and bought a Supra FAX Modem 28.8 and havn't had a single problem with it!

So it comes down to this:

Bad service.
Poor employee training.
Ridiculously slow shipping.
Sub-standard programming.

And to top it off, USR unashamedly advertised their lousy modem in every computer magazine at the stand as the "leader" and the "first to offer V.34". I'm sorry, but they can't possibly be a leader with service like that. And if their modem doesn't work, they can't possibly be considered the first at anything!...Except maybe gross negligence.

Johan,

That kernel is corrupt :(There is a working one at ftp.cnam.fr
/pub/atari/Linux

That should solve your problems.

You should initally boot with -r filesys.img as the command line to the
bootstrap program and then start doing the setup on the hard disk :)

Hope this helps :)

Cheers,
Dave

I have also experienced this error with HSMODA4,5 &6 on my TT on modem
port 2. I simply do not use it anymore and I have no problems at all. I
use Stalker 3.04 with a serial buffer of 20k and a 14.4k modem with a
DTE speed of 38400. I also found with HSMODA that at 38400 I would not
alwasy get a connect. Perhaps someone else has similar experiences they
might like to share. I get exactly the same speeds from my TT with or
without this program plus only on uploads I get NO positioning errors.
Not a techno buff but I feel that it is something to do with buffer
overflows...perhaps someone else can help. Of course it could also be a
combination of using Stalker.

I look forward to further info on this as well.

Regards from OZ
Mark

Message-ID: <03191995.161729@empyr.dircon.co.uk>
Source record: 27056

Hi,

I bought a SCSI device of some sort at a garage sale, intending to strip it and use the guts as the basis for a hard drive. When I opened it up, I saw a 'Warning - Laser' sticker on it. I plugged it into my SCSI chain to find out what it was and it reported that it was a 'MAXTOR RXT-800S'.

The case says it is a 'Storage Dimensions PC 800S'.

Erm...what is it ? It looks like it's some sort of optical drive.

Can anyone tell me what it is, what sort of media do I need to put in it, and if it is worth anything ?

Many thanks in advance,

Kevan Winch

1189. Hard drive for STe -- please help

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-19 18:26:20 UTC
From: martinm@sps1.phys.vt.edu
Message-ID: <3kht0c$don@solaris.cc.vt.edu>
Source record: 27058

A friend of mine has a 1040 STe which he uses for word processing and game playing. I've lent him my external floppy drive, so now he has two drives to work with, but he'd like to get a small hard drive. However, it has to be CHEAP (certainly no more than $100). Back when I still used my 520 STfm, the magazine ads listed hard drives for something like $600 and up. But these days hard drives are very cheap (especially for the old MFM drives). I've seen bare drives selling for as low as $20 (for a 20 or 40 MB drive). The problem is that you still need a case, power supply, and host adapter. I remember that E. A. Brown used to sell an ICD adapter for about $120. How much do these things cost now, and can I buy one somewhere? What about a SCSI drive? I think the STe has a SCSI port on the back, so is an extra adapter needed in this case? I just saw mention of an IDE adapter. Is there more information on these? Actually, if someone has an old 10-40 MB hard drive (complete with case and adapter) that they'd like to sell (again, less than $100), I might be interested in buying it. I would appreciate any help as I have been out of the Atari "loop" for some time.

-Michael

P.S. -- I am also interested in a double-sided (internal) floppy drive for a 520STfm.

That's the conclusion I came to, as well. Did the upgrade patches on
STalker so that I'm now using v3.04 and took HSMOD06 drivers out of my
AUTO folder. My ZModem uploads at 38,400 via 14.4 modem work like a
champ now.

I found out that the problem was indeed HS-Modem...but it was my
fault...I had incorrect settings....

I have a modified serial port (not RSVE), and when it came to setting
up HS-Modem, I selected RSVE on...once I switched this off, everything
was fine. :-)

You're confusing this with the Megafile 44. The Megafile 30 does not have
such an "enabler" DIP switch, and it doesn't need one.

>> Erm...what is it ? It looks like it's some sort of optical drive.

>> Can anyone tell me what it is, what sort of media do I need to put in it,
>> and if it is worth anything ?

I don't know that particular model number but if it has a 5 1/4 inch slot
in the front then it takes 650 Mb optical disks, if it is 3 1/2 inch then
it takes 128 Mb optical disks (Maxtor is the manufacturer of this
particular drive and has been simply rebadged by Storage Dimensions).

You'll probably need special drivers to make the drive useable since they
report as themselves as changeable media which most drivers don't
understand (unless there is a dip switch to change the report to fixed
media in which case you'll probably need to buy 512 byte block disks
rather than 1024). Also note that the lens' in optical drives often go out
of alignment / get dirty so it might need servicing too.

1199. Re: NEC CDR-83J CDROM

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-20 15:12:37 UTC
From: bm827@FreeNet.Carleton.CA
Message-ID: <D5qvL1.ECu@freenet.carleton.ca>
Source record: 27066

I have a NEC 83 CD-ROM and it does not work for some reason. Since it has the same specs as the NEC 73, I imagine that the "73" may not work either.

I don't know why this is so. The "83" works perfectly on an IBM with a CorelSCSI card.

Another point: the ExtenDOS manual does NOT enumerate the "73/83" line among the CD-ROM readers it works with. Roger Burrows doesn't

explain why, but he's very helpful and would probably tell you if you phoned him or dropped him a line.

The best thing would be to ask the seller to let you try it and give you the option of returning it if it doesn't work on your system.

I hope this helps. Randy Kwak

Try to disassemble it and take every chip from it's socket and plug it in
again. Take the PLCC chips out of their sockets and carefully bend the socket
pins inwards a bit. Check the power supply for stable +5V output.

In cases of contact/supply problems, test software will maybe tell you what
is not working, but it won't tell you wat part of the system causes this.

(eg. bad MMU contact: every disk showed '0 bytes in 0 files').

HM> The newer ones, i.e. 5201, 3501, and 3601 should do that as well. The latter
HM> being _very_ fast, some 600plus kb/sec transferrate.

Most Cd drives are capable of reading/playing audio disc. The worse problem
is the software driver often isn't supporting the drive, unless it's an SCSI
2 drive. I got two cd-rom drives here, and both a capable of playing audio
cd's, but i got no driver who supports it 8-((

So to be sure your cd-rom drive will play audio, you either have to get
an scsi-II drive, or you may be lucky to get the audio scsi commands for
your none-scsi II drive, and then get the author to support it.

1207. 56001 DSP

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-21 05:15:39 UTC
From: ekl@sdf.saomai.org
Message-ID: <D5ryM6.Gu8@sdf.saomai.org>
Source record: 27084
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.next

Is it true that the 56001 DSP can execute 3 threads of execution simultaneously? I heard that the DSP has an average instruction execution time of 1 cycle - does this take into consideration the 3 execution threads, or can I actually get 3 instructions per cycle by using 3 different execution threads?

Does anyone have a neural net simulator? Preferably in 56001 Assembler, or maybe C. There is an application I want to experiment with and I'm wondering if the Atari Falcon will be fast enough for it.

Any information would be appreciated.

The STe has a midithru combined with its midiout, allthough not using the
same pins. It's possible that you have some sort of shortcircuit. Else it
must be the software you are using (check ACC's and AUTO.PRG's).

1210. Re: Hard disk driver question

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-21 11:01:13 UTC
From: borst@cs.utwente.nl
Message-ID: <3kmblp$4v4@utrhcs.cs.utwente.nl>
Source record: 27076

Pim Borst (borst@cs.utwente.nl) wrote:
: Hello,

: This weekend I installed a second hard disk in my Megafile 30.
: The problem is that the AHDI driver only recognizes the first
: drive. Are there drivers around that do look for the second
: unit?

: Thanks,
: Pim Borst.

I found out what the problem was. Although I still need new driver software to use all of the capacity of the new drive, the original problem had to do with the hardware extension. I found it out myself when I double-checked the changes I made to the controller, but still I want to thank all the people that replied to me in this group or by e-mail. It is great that
people like you take the time to read and answer the questions posted on the net.

There are two connectors on the controler board inside the Megafile 30 that go to the first hard drive, one with 34 pins (for data), one with 20 pins (to control the drive). Next to the connector with 20 pins there is place for an extra connector (also 20 pins), you only have to solder one in.
To connect a second drive, connect the 34 pin connector to both drives and the new 20 pin connector only to the new one. Furthermore configure the new drive as second unit with its jumpers/dip-switches and give it some power.
Now the problem with my controller board was that it connected pin 17 of the 2nd 20-pin connector to 0 volts. This was why I could not read any data of the second unit. What I had to
do was to cut one of the copper connections connecting this pin on the circuit board. One is
on the top side of the board and goes to a 100 ohm resistor. The one that had to be cut was on
the bottom side.

The way I formatted the drive was by disconnecting the original drive and replacing it with the new one (don't forget to set the jumpers to 'first unit'). Leave the connector for the second unit unconnected. Now format the drive with the AHDI-utilities and reconnect it to be
the second drive again. Put the original drive in place again and the NOAHDI driver (from a.a.u.e)
will be able to detect and use it.

The only problem left is that NOAHDI is quite old so it can can only manage drives <= 64Mb properly.
To be able to use bigger drives you need modern driver/formatting software like ICD/HDDRIVER/CBHD.

Then you are also able to (re)format the second drive without having to the above format trick.

Pim.

1211. Re: Swap partition for Linux: How??

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-21 13:04:13 UTC
From: tichel@hawaii.uni-paderborn.de
Message-ID: <3kmisd$j6l@news.uni-paderborn.de>
Source record: 27080

Hello.

If you want to use a Linux-Swap-Partition you have to set up another
Type than BGM or GEM. You can di this e.g. with Zorg (Shareware).
You have to read the first sector of your harddisk and there you can
find the types. You can use SWP instead of BGM for your SWAP-Partition.

Bye, Tichel.

If I recall correctly the ST Profibuch mentions something about some
MIDI cables activating a hardware MIDI thru function because of some
weird pin layout on the ST; I'll look it up. You might want to try
using a different cable.

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX

13) close [CR] to close the FTP site you're currently on, so that another site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX .....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

1215. Supra 14.4 Express modem and Ataris?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-21 19:09:42 UTC
From: ai066@FreeNet.Carleton.CA
Message-ID: <D5t187.CIn@freenet.carleton.ca>
Source record: 27085

I just looked at the Supra 14.4 express series modem (external IBM version). It was listed at Compucentre at $139 CA (A great price). In order to save money, Supra does not include an AC adapter. Instead, the modem gets its power directly from the DB 25 pin RS-232 port.

Q. Is the RS 232 port on the Atari putting out the same line voltage, on the same pin, as the IBM 25 pin RS 232 port? Will the Power supply on the Mega STE handle the extra load? And, when you convert a DB 25 to the smaller mac style RS 232 port (like on the Mega STE) with an adapter plug is the line voltage still available?

This modem looks like it could be a super deal, if it doesn't bloww Atari's RS 232 ports!

My STFM uses two unused pins on the MIDI out to provide
MIDI through, a nonstandard arrangement. I had problems
with midi cables that had these pins wired. The other
MIDI devices I connected to would get hung up. Could
this nonstandard Atari MIDI through arrangement be
involved in your problem?

This won't help because the second hard disk in this case is not an
independant physical device but an additional logical unit. You need a hard
disk driver supporting more than one logical unit per controller to get it
work. Drivers which support this are CBHD and HDDRIVER.

1220. Re: Problem with STe & MIDI

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-22 09:19:53 UTC
From: cgra@se.bel.alcbel.be
Message-ID: <3koq3p$384@btmpjg.god.bel.alcatel.be>
Source record: 27089

MIDI uses 5-pin DIN connectors such as are also used for consumer audio, but only defines a use for three of the pins: IIRC 3 (the middle one) is connected to the shield and pins 1 and 3 (the outside ones) carry the current-loop signal).

The two other pins are a temptation which Atari couldn't resist: they put a Thru signal on them, which you can "bring out" using a special Y-cable. Which employee won a weekend in Tampa, Florida for this cost-saving invention is not recorded. ;)

Unfortunately some cables short the two "unused" pins to their neighbours, heaven knows why. Combine one of these cables with the Atari trick port, and voila! you have the constant-MIDI-Thru syndrome.

1221. Atari SLIP programs?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-22 09:52:03 UTC
From: Peter_Epp@learnnet.nt.CA
Message-ID: <311013.ensmtp@learnnet.nt.ca>
Source record: 27090
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Does anyone know of SLIP software that is available for Atari? Also, is there FirstClass software, or a reasonably good clone of FirstClass, available for the Atari? If anyone knows, please E-mail me. I don't care if you post the answer here as well, just as long as you E-mail me.

Also, please excuse the weird cross-posting. I just wanted to reach as many people as possible who might know.

Thanks in advance,

Pete

|> replacing with a socket is rather fiddly and my own soldering skills are
|> not really up to the job. :-((
A good way that I have found of soldering surface mount chips is the following:
Buy a roll of Solder Braid
Now, having removed the old chip, place the new chip on the board and solder the four legs/corners of the chip. Next flood all the legs with solder, so that all the legs are almost shorted together. Then use the solder braid to remove the excess solder. Finally check with a magifying glass fow and shorts and remove them with the solder iron etc...
You should now have a chip soldered neatly on the surface of the board.

Hope this helps!

1224. STE SIMMS and Overclocking

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-22 10:38:40 UTC
From: ling@dogmatix.inmos.co.uk
Message-ID: <3koung$hio@lion.inmos.co.uk>
Source record: 26993

Hi!

I have a 1040Ste and I am thinking of upgrading it to 4Mb of Memory and also speeding up the the Processor.

I know that on a PC you can change the clock crystal to improve the processor speed, but can you do the same on a 68000 CPU? I have located an 8Mhz crystal in the STe motherboard, is this the correct crystal? Has anyone tried to overclock their STe??

If I speed up the CPU will I need faster memory? At the moment my STe has 100nanosecond SIMMs. Will I need to buy faster ones, such as 90 or even 80ns SIMMs?

Also does the SIMMs for the STe need Parity checking or not? Will ordinary 30pin PC type SIMMs do the job?

Any help and advice would be most grateful.
Thanks for reading!

CAUTION: Do _not_ change the 'B+'-potentiometer!

Here are instructions ... sorry for the large posting ...

Here's the text file with instructions on how to enlarge your SM124
Monochrome Moitor screen. I found this file on an old PD disk. I did
the modifications on my own monitor without any trouble. Hope it helps!

****

HOW TO ENLARGE YOUR
SM124
MONOCHROME MONITOR'S
SCREEN SIZE

by
Jack P. Durre'

If you've used the Atari ST computers with the SM124
monochrome monitor, chances are quite good that you have come to
accept the wide (black or white) border surrounding the usable
area of the screen. You may have asked "why?", but probably only
grumbled about it, and went back to work. If you've got the time
(about 15 minutes, on average), the tools (3 or 4, and available
from most Radio Shack stores), and the nerve (very little
required!), this article will explain how you can actually have a
LARGER, _usable_ screen (as compared to the Mac)!

First, credit where credit is due...The original information
for this modification came from the April, 1986 issue of "ST
APPLICATIONS" magazine, in an article written by Albert Lew. I am
merely explaining my own methods, following the original steps as
outlined in Mr. Lew's article.

That said, let's get the caveats out of the way: While I may personally consider the following modifications to be simple and straightforward, _I_ can't write a "Hello World" program in BASIC!!! In other words, what may be "simple" for me, may be quite difficult for you. If you feel that you are NOT qualified to make these modifications, DON'T! Find an able (and willing!) friend or service technician to do it for you, or forget the whole idea, and live with what you've got! If your monitor is in warranty, opening the case will, obviously, void that, and the possibility also exists that even if you wind up paying for repairs, the technician MAY refuse to work on your machine! (Chances are, however, that he's more likely to want to know more about making the mods himself!) Further, the electrical current coming from the wall plug is enough to knock you silly, or worse, and inside of the monitor case, it gets even stronger, so be aware that touching the wrong thing may well put you into an "endless loop" of your own! In other words, YOU CAN GET KILLED! Now, if you've decided that you'd "kill to have a larger screen", then follow me!

Tools: These are really few in number, and quite simple to come by. Mr. Lew suggested some non-TV type of tools, but I'm going to stick to my guns here, and insist that you use the right tools for the job! You'll need a Phillips screwdriver, preferably a #1 size. (If you don't know the difference between a Phillips, and a slotted-head screwdriver, let me stop you right here, and suggest that you return to your programming!) You'll also need two TV "tuning tools"; a hex-tool, 3/32" ("across the flats", as they say) and a flat-bladed tool, 1/8" or so in blade width. Both of these tools should be made of non-conductive (plastic) material, and longer is better! A make-up mirror is also quite handy, particularly a free-standing one. I might also suggest a thick towel or other material to protect the face of your monitor and the top of your desk, during the time that you are moving it around. Finally, the toughest item of all...some CLEAR SPACE! You'll need to move the monitor around a little, and of course, it will need to be connected to your CPU (and I DON'T recommend trying to balance it in your lap!), so plan accordingly.

Next, let's try to orient ourselves, so that you aren't amputating the screen, while _I_ am talking about the power cord! The "front" of the monitor is the viewing screen, the "rear" is where the power cord, and CPU/Monitor connector cable exit the case. Since we're going to turn the entire thing around, so that the screen is facing AWAY from us, "right" will now be the side where the speaker is located, and "left" obviously (it IS, isn't it?) will be opposite that, where the control knobs are. "Top" will still be in its usual location, and if you haven't already figured out where the bottom is, it's time for another cup of coffee!!!

Ready? Here we go!

Boot your system, using either the desktop, with one or more windows opened, or call up a text file. The ideal situation is to have text reaching all four corners of the screen, so that you will be able to compare from one area to another.

Now, unplug the monitor's power cord from the socket in the cabinet, and turn the monitor around, so that the rear of the case is facing you. Place the towel or padding on the desktop in front of the monitor, and tip the entire unit up onto the glass face (carefully!). Now, using the Phillips screwdriver, remove the 5 screws holding the cabinet together. (Two on the bottom, one on each side, about 3/4s of the way up, and one just above the power cable socket.) Once these have been removed, put them somewhere safely out of the way, and don't worry about mixing them up, they're all the same size. Now, gently lift straight upwards on the rear sides of the case, and it should begin to lift away...CAREFUL! You have yet to disconnect the speaker wires, and there's not too much extra wire here. See it? Carefully reach down to the connector where it joins with the mother board, and pull it straight away from the board, disconnecting it. Don't be too concerned about the orientation of the plug, as it _will_ work in either direction. Once you've done this, continue to lift the rear section of the cabinet away, feeding the CPU/Monitor cable through the opening as necessary.

Set the cabinet out of the way (And don't STEP ON IT!), and proceed with the REAL modifications! Tip the monitor back down to its bottom, and arrange the mirror so that you can see the screen while working at the rear of the unit. Re-connect the power cord, and turn on the monitor, being careful to NOT stick your fingers inside the wrong areas!

Grab your plastic flat-blade tool, and start looking along the right side of the mother board (remember now, we're looking from the rear of the set!). Near the front of the board, neatly tucked between the picture tube, or CRT, and a vertical metal heatsink/power board, is a row of 3 white adjustable controls, or potentiometers, about 1/2" in diameter, labelled "VLINE", "VSIZE", and "VHOLD". We're interested in "VSIZE", which is the middle control "pot". (NOW you know why I suggested a _long_ tuning tool!) Gently slip the tool into the slotted head of the pot, and while watching the screen in the mirror (you DID boot up the system, didn't you?), begin to turn the tool slightly (try not to apply much pressure to the pot, as that CAN effect the setting). The top and bottom of the screen will begin to move, together or apart! Expand the screen to within approximately 1/2" - 3/4" of the top and bottom of the "bezel", or plastic frame on the front of the monitor. (Too close to the bezel, and you'll find that you have to be EXACTLY in front of the screen, or miss some of the information!)

See? Feeling more confident already, aren't we?

Moving right along, we will now swap our tuning tools, opting for the hex-shaped one. Looking near the left rear corner of the mother board, close to the point where the power cord socket is located, you will find a plastic shaft with a slot in it, sticking straight up from the board, and just slightly ahead of that, a strange-looking device, composed of a small-diameter tube, with what appears to be a couple of "bobbins" of wire on it. Inside of that small tube, there is a small, somewhat-fragile core of graphite, which WILL break, if mistreated, so act accordingly! Gently lower your hex-tool into this tube, and you will feel it slide home into the core. (Again, don't press down on the core.) By turning this core in a clockwise direction, and watching the mirror, you will see the screen shrink slightly first, and then grow WIDER!!! (Now we're really starting to cook!) Remember to leave about 1/2" - 3/4" border, to avoid having the edges hidden by the bezel.

What's that you say? Your picture got larger, but it looks off-center? Well, cheer up, bunkie, 'cause we're gonna fix THAT right now!

See that big chunk of glass up front? Well, it has a "neck" on it, and the back end is pointing directly at us, with some strange looking electronic stuff along the way. At the very back of the tube are some electrical connections, but we're not worried about them...what we're after are the two magnets that look sorta like "Q"s around the neck, about 1-2 inches forward of the connections. See 'em? They're dark grey or black, probably, and have a little "ear" sticking up away from the tube, so that you can _gently_ push them around until you get the picture centered on the face of the CRT. Don't worry about touching THEM...just try to keep from resting your hands on any "hot" contacts! This may take a little time to screw up your courage, but once you get the hang of it, you'll find it quite easy! Once you've got the picture fairly well centered, you may need to go back and re-adjust the VSIZE or Horizontal size, as all of these things are interrelated.

Next, we're gonna make the picture sharp again, in case you're worried that you've just lost that beautiful screen that you love so much!

Remember the slotted plastic shaft at the left rear of the mother board? Well, THAT's the "FOCUS" control, and if you'll again resort to the flat-bladed tuning tool, you can use that control to find the best compromise for YOUR taste! Atari chose to go for a tack-sharp center screen, and let the corners be a little softer in focus. You can do the same, or go for sharp corners and let the center go a little soft, or shoot for some compromise. (Hey! Life's a compromise!) Once you've done this step, you can actually turn the set around, and admire your handiwork!

If you see some other minor fine-tuning that you want to go back and do, feel free. This is now a CUSTOM-TUNED monitor of the first rank, and you will have even more pride in your ST than before!

To reassemble the cabinet, turn off the power, slide the CPU/Monitor cable through the rear cabinet section, and with your third hand...yep, gotta remember to reconnect the speaker leads! There IS a sort of indicator as to which way the plug was originally connected...One side has two slots, and the other side has only one, but the speaker WILL work even if this connector is reversed. Incidentally, if you want to go one step further, Mr. Lew suggests the addition of an Audio-OUT connector from this lead. Your choice.

Finally, having reassembled the cabinet, re-connect the monitor to the CPU, boot the system up, and check out the BIG PICTURE!!! If you have any problems, check first, to see that power is reaching the set, and that the green LED indicator is on. If not, you may not have reconnected the power cord securely, or possibly a fuse has blown or been broken (fuses are located on the vertical power board at the side, near the VSIZE pot, and easily replaced from Radio Shack).

Enjoy your "new" monitor, and if you have any questions on this modification, you can reach me here, on CompuServe, at PPN 75046,476.

Seeya! [Jack]

Is there anybody in here who knows when the CD-rom with Linux and the installation tool comes out ???

Does there exist a working version which runs on a Falcon ???
Does it support graphiccards and screenenhancers for the Falcon ???

Any answer will be greatly appreciated :-)

Keep Cool and Flying...

Can LINUX on the Falcon run with 4 MB ?
If so can it use virtual mem (68030 PMMU) ??

Where can I find the rest of LINUX, so that it can be completely installed with X-windows ??

>SCSI2. I think my Maxtor 345 is a SCSI1.. it's pretty old.

Don't tell my LPS270S and my SyQuest 3270S, they might go on strike, then ;-)

Usually the problem is parity or bus-arbitration. Parity can be switched off
via command on a system that supports parity.

Arbitrating drives won't run on ACSI-hostadaptors at all. Real SCSI as in
Falcon or TT is required for those babies.

>SCSI2 or WideSCSI. At LEAST it should support multiple drives.. which

I wouldn't take a chance with this one. Spend just a 'little' bit more
and opt for the SupraFAXModem 144LC. It comes in a metal case (not all
plastic like the Express unit), supports V.32bis, caller ID, etc, and
uses an external power supply.

Give us some facts to back your opinion, if you would.

I might agree to a certain extend, that the *Sportster* line of modems is not
the best there is.

I would back-up Daniel's assumption re. the *Couriers*, however.

But a new player is coming to town, soon: The new ZyXELs. A great combination
of a _full_ V.34 implementation and ISDN.

And just to make you guys a little envious, the German Telco sponsors the
purchase of certain ISDN-equipment with up to 700,-- DM. Guess what I'll be
getting real soon now ;-)=)

Ciao

DRB>Can somebody tell me the TRAP call (or whatever), that
DRB>I need to be able to set the parameters of the serial
DRB>port (i.e baud, parity, etc).

What you need to do is call RSCONF, which is call number 15 in xbios.

eg 100 trap 14,15,speed,flow,ucr,rsr,tsr,scr

where speed=0 for 19200, 1 for 9600, 2 for 4800, 3 for 3600, 4 for 2400
flow 0= no flow control
1= Xon/xoff
2= RTS/CTS
3= xon/xoff and RTS/CTS
scr=synchronous character register
tsr=transmitter status register
rsr=receiver status reg
usr=USART control reg

You need to put a parameter for each of the values. Pass a value of -1
to leave the parameter unchanged. A book of the GEMDOS calls should
help explain this better, but as an example..,

100 trap 14,15,4,-1,-1,-1,-1,-1

This line calls RSCONF (call number 15) in the Xbios (trap #14 from
STOS). The 4 sets the speed to 2400 baud, and the string of -1's leave
all the other parameters unchanged. Hope this helps !!

I'm looking for people who have experience with the Gemulator. I'm thinking of getting one - no I'm not gonna buy an 80x86 - I just want to have a decent operating system at work :-) How fast is it compared to my 16Mhz STe when run on a 486/33 ? How well does it utilize modems and hard disks? Can serial communicatios keep up at 19200 (or 38400?). Can existing DOS/FAT partitions be used?

I'm thinking of running it in an OS/2 full-screen session. OS/2 is OK, but it thrashes the disks too much, and seems a bit slow, and the apps that come in the bobus pack really suck, and I can crash OS/2 pretty easily just by doing alot of multitasking.

Any comments appreciated.

In article <AA644EE0mrn@albemuth.equinox.gen.nz>, (John Collis) writes:

] Another question for any Gurus out there. It strikes me that the DMA
] problem must be related to the chip heating up, or there would be errors
] immeadiately you booted, not just after an hour or so. A friend
] suggested therefore that maybe a mini cooling fan (like those for
] processor chips) on top of the chip my be a kludgy but effective fix!!
] Any comments??

A much easier solution would be to fix a small IC heatsink on top of
it. This can be gunged on using heatsink compound (if you're not going to be
moving your ST around too much) or better still, glued on using heat
conductive glue (available from RS Components in UK and probably many other
electronics stores).
IC heatsinks are easy to get and cheap. Look in an electronics shop
or catalogue. Use the biggest that will fit in the case. Forced air cooling
probably isn't necessary.

> 3 execution threads, or can I actually get 3 instructions per cycle
> by using 3 different execution threads?

The 56001 can under certain circumstances execute 3 instructions
simultainously and that is when you want to:

<multiply>, <add the result to previous result>, <load the next data>

It will add 2 clocks to your execution time (and its running at 32mhz)

Most (All?) DSP's can do this. It's the stuff digital signal processing
algorithms are made of.

There is even hardware control for loops (so you wont have to increment some
silly counter and test its value, the chip will do this for you.)

> Errrr...Wrong! USR is garbage.

Huh? Then I guess my USR DS V.everything that sits on my desk should go out the same way as "normal" garbage. Pity, it has given me great 28k8-connections and performed flawlessly in FAX-mode ever since I bought it. I guess I`d better go buy myself one of those modems with the super-high-tech and very important display-thingy. They are, as everyone now knows, essential to the usefulness of a modem. ;-)

> They USED to make great modems...Not any more.

Could you please tell me what more you demand from a modem but flawless operation? Colour, shape and useless displays?

> Save yourself the hassles and worry.

That`s exactly what I did 6 months ago when I decided to take a deep dive in the wallet and buy a USR!

> Go with Supra or Practical Peripherals.

I don`t know about PP, but Supra makes great modems. I won`t argue with you about your choice of modem, but please try to be objective. Putting down USR-modems just because you feel your modem is superior (which I strongly doubt it is BTW) just shows your ignorance! My guess is that both modems (USRs and Supras) have their strengths and weaknesses.

Please move this thread into .advocacy if you decide to respond.

In article <3koual$hio@lion.inmos.co.uk>, ling@dogmatix.inmos.co.uk (ling li) writes:

]|> Removing it and
]|> replacing with a socket is rather fiddly and my own soldering skills are
]|> not really up to the job. :-((
]A good way that I have found of soldering surface mount chips is the following:
]Buy a roll of Solder Braid
]Now, having removed the old chip, place the new chip on the board and solder the
]four legs/corners of the chip. Next flood all the legs with solder, so that all
]the legs are almost shorted together. Then use the solder braid to remove the
]excess solder. Finally check with a magifying glass fow and shorts and remove
]them with the solder iron etc...
]You should now have a chip soldered neatly on the surface of the board.

The removal process has been rather simplified here! It's not quite
as easy as just using solder braid. After getting as much solder off using
braid (which will require a 50Watt iron at least), there are two alternatives:
1. Either lift each leg carefully with a scalpel or sharp knife. If it does
not lift easily, apply heat with the iron while lifting.
2. If you have *very* pointed nose cutters (worth investing in SMT cutters)
cut every leg off the chip until the chip falls off, then remove the legs
still stuck to the board with the iron and/or braid and/or tweezers.
Note that this is not an easy process, and it may be worth practising on
a junk board with SMT chips before attacking your ST. It is very easy to
lift/damage tracks.

The resoldering process decribed above should work but may be prone
to microscopic solder bridges - worth testing with a multimeter on buzz mode
(don't use resistance measurement mode - it may apply too high voltages to
the IC). A better way is to use a *very* fine tip (buy one) and SMT solder
(which is very fine), do each corner leg as described by Ling above, then
carefully do each other leg. Braid can be used when you cock it up!

If you're not confident, don't do it.

Paul Hills (experience of doing this several thousand times!)

1246. Re: Connecting Falcy and radio

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-24 13:32:35 UTC
From: cgra@se.bel.alcbel.be
Message-ID: <3kuhlj$js4@btmpjg.god.bel.alcatel.be>
Source record: 27021

Most *radios* I've met don't have any way to connect an external source. A "hi-fi" amplifier, or "receiver", or almost anything with a tape recorder built in, normally does. Look for an input labelled "ext[ernal]" or "aux".

The Falc's output is a walkman-style stereo jack plug; it should be easy to find a cable with either a jack plug at each end, or a jack at one end and a pair of cinch ("RCA") connectors at the other if that's what your amp requires. Even in Slovenia.

What *won't* work is connecting the socket on your Falcon with the little picture of some headphones to the socket on your radio with the same mark-ing. That way you'd have two parties talking and no one listening.

You don't have to change the ID if you update HDDRIVER.
Versions >= 3.3 will recognise when the bootsector is
destructed by mkswap, dd etc.

> Help! I would really like to get Linux swapping happily so could
> some kind soul please put me out of my misery.

If you have no more than 4 partitions on the drive, you can
quite easily change the partition IDs in the rootsector with
any simple freeware sector editor, like CHKDISK3 from Atari.

Atari Hard Drive Utilities do not support more than one drive.

To use two drives, you would have to use software that supports more than 1 Logical Unit Number. I have been using Supra Hard Disk Utilities to do this on a converted Megafile, and I know that ICD Hard Disk Utilities will do the job if you have an ICD host adapter in there somewhere.

I imagine that ICD Pro would also be all right - it apparently does not require the host adapter to work.

Once you get the appropriate software, you have to format each drive separately and make sure you get the jumpers on each drive right. You may also have to fiddle with cable length (depending on host adapter) because one drive may want to be "closer" to the host adapter than the other.

1252. Atari term mode in GNUPLOT 3.5?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-25 01:09:56 UTC
From: cordes@ac.dal.ca
Message-ID: <1995Mar24.210956.36292@ac.dal.ca>
Source record: 27018

I just got gnuplot v3.5 and was surprised to find that it's missing the 'atari' terminal setting. The only way I can get any on-screen plots at all is to use the 'dumb' terminal setting - not great. This is surprising since the docs certainly still refer to the atari terminal setting. I got my copy from the Clausthal ftp site in Germany and it's set up to use the 'mtos' terminal setting; to get (on screen) plotting with it you apparently have to be running MultiTos, which I don't have. v3.0 had the atari terminal setting, but 3.5 seems to have some worthwhile features (such as nonlinear fitting), so I'd like to use it. Does anyone have any ideas for getting around this problem?

Thanks for any suggestions, John.

1253. 520 upgrade blues

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-25 02:37:51 UTC
From: bbrown@ozspace.brisnet.org.au

Source record: 27019

HELP!!!! I have just finished upgrading a 520 STFM to 1 meg, and now I get polka dots on my desktop. On top of that nothing seems to run properly, not even programs that behaved with 520k. However when I do a quick cold reset the dots disappear, and the system registers a whopping 1024k. Programs seem to work normaly with the cold reset method, but I still have a hunch that all is not well. The upgrade consists of 16 DIP IC's (which I socketed), 16 filtering capacitors, and 3 68 ohm resistors for the memory lines. I have checked for cold soldering joints, bent legs on the IC's, and have jumped the resistors on the memory lines. Nothing, I even pulled out a magnifying glass and looked for stray bits of solder. My only clue seems to be the MMU which is a surface mounted C101601-38, which I have never seen before. I hope someone has tripped over this rock before as I am at a dead end.

>speeding up the the Processor.

Yes just buy a ICD ADspeed, you can't change the speed of your STE unless you
are a Computer Eng, or some thing like that, there is more to it than you
know..

9 bit SIMMS should have the 9 bit inputs shorted out, if not you end up drawing
hight current, the STE does not have these pins connected...

ICD ADspeeds were about $125us at there sale price....

1256. Some major problem with MiNT

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-25 08:50:08 UTC
From: Timothy Miller <millert@csee.usf.edu>
Message-ID: <Pine.SUN.3.91.950325033715.14334A-100000@grad>
Source record: 27028
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.programmer

I'm having some trouble with MiNT and I was wondering if any of you kind people could help me.

Here's basically what I'm doing:

```
fd1 = Fcreate("U:\\PIPE\\TIM", 0);

...

fd2 = Fopen("U:\\PIPE\\TIM", 2);
Fforce(-1, fd2);
```

Now, this should redirect BIOS, which in turn redirects GEMDOS, right?

Well, if I do the above, BIOS gets redirected but not GEMDOS.

If I do this:

```
Fforce(1, fd2);
```

Then GEMDOS (stdout) gets redirected, but BIOS doesn't.

here's my actual code (pardon the debugging stuff):

```
void spawn(void)
{
int fd;
char name[30];

sprintf(name, "U:\\PIPE\\TIM.%hd", numapp);

printf("spawning... ");

app[numapp] = Fcreate(name, 0);
printf("(%hd)", app[numapp]);

if (Pfork() == 0) {
fd = Fopen(name, 2);
printf("[%d]", fd);
printf("{%d}", (int)Fforce(-1, fd));

Bconout(2, 65);
printf("This is a test!");

/* Pexec(100, "child.ttp", empty, NULL);*/
exit(0);
}

printf("spawned\n");
```

```
numapp++;
}
```

Note the Bconout(2...) and the printf("This..."). If Fforce is set to -1, the 65 ('A') gets passed through the pipe and the string prints directly to the screen. If Fforce uses 1, the string goes through the pipe and the 'A' gets printed directly to the screen.

All documentation I have (including the MiNT docs themselves) says that -1 should redirect the console for both BIOS and GEMDOS, so why isn't it?????

And on a related note, if I DO get this to work, will what I'm doing there work with the Pexec? Since Pfork actually suspends the parent process, I can't use Pfork and then Pexec(0, ...), so the only thing I could think of was to Pfork so that I could isolate the console from the parent process, and call the child program in the background, and then terminate the parent program's child process. Is there a better way?

Thanks.

Use GCC 2.5.8 instead!

>By the way is there any mailing list for Atari Linux?
Atari only? No! (well, there is an atarix list for X windows on the atari...)
But why not use the Linux/68k lists: if Linux runs Amiga and Atari are the same!

Message-ID: <AFSFPEL.95Mar26064249@castor.cid.aes.doe.ca>
Source record: 27031

I'm considering some memory upgrade options on my TT, and I wouldn't mind if some of my fellow TT owners let me know what they think...

There are eight socketted 256K ST RAM chips on my TT's motherboard. Would it be possible to just lift those out and replace them with 1Mb chips? I'm vaguely aware of TTs floating around with 10 megs of ST ram, so I imagine it's feasible. Are there any drawbacks? Any particular kind of DRAM (I assume it's DRAM...) I should specifically look for?

From what I can see, DRAM chips are more affordable than SIMMs of similar capacity and speed. I know the ST RAM buss is slower, but maybe just this once I can offset quality with quantity... :-)

] I have an atari 520 ST which has a virus. This virus damages the disk when
] you write to it (makes it unreadable). Does anybody know where I can get a
] virus checker/remover?

Probably isn't a virus but a stuffed write-head on the disk drive. You may
have to remove the drive and clean it with some meths and cotton wool.

Just in case though:

atari.archive.umich.edu - atari/Utilities/Virus/vkiller.??? will probably
be of some use.

Try booting with a clean machine (no disk in the drive, and hard-drive (if
any) turned off). Then wait for the machine to boot. Try formatting
a blank disk, and copying some files onto it. If it works okay, then it
might be a virus.

Right on the first part, wrong on the second (or rather, incomplete on the second; it does re-direct GEMDOS handle -1, the thing that you get when opening "CON:", but it doesn't redirect stdin (handle 0) or stdout (handle 1). Those you have to redirect explicitly as well. So you need three Fforce calls:

```
Fforce(-1, fd2);
Fforce(0, fd2);
Fforce(1, fd2);
```

to redirect BIOS, GEMDOS stdin, and GEMDOS stdout. (Redirecting GEMDOS handle 2 as well is probably a good idea, since some compilers use this for stderr).

```
> if (Pfork() == 0) {
> fd = Fopen(name, 2);
> printf("[%d]", fd);
> printf("{%d}", (int)Fforce(-1, fd));

```

>And on a related note, if I DO get this to work, will what I'm doing
>there work with the Pexec?

It looks like you really want Pexec mode 200 (replace the current process) rather than mode 100. (Pexec(200,...) is the same as the Unix exec() function.) After the Pexec mode 200 the parent will be able to wake up from Pfork(), since the child's address space will have been replaced with a new one.

If the PC Linux is anything to go by then a 4Mb falcon is just about practical - though X in 4Mb is painfully slow - as it keeps swapping to hard disk.

Also I've heard that Linux/68 has a lot of troubles with Falcon IDE drives. The figure of about 40Mb is reasonable though if you have X installed.

Only having a TT I can't verify the drive problems though.

I have had a fujitsu M2249SA hard drive for some time in the hope that I could one day hook it up to my STe, however, after many vain attempts of trying to get it working with a BMS-100 drive I gave up for a while.. a few weeks ago I managed to get another drive, but this had sn ICD host adaptor built into it... what sort I'm not sure (it has a clock, DMA in/out and is stamped on the back P/N 90107 Rev 2). After hours of more playing about, the drive will still not work... I have had it working on a friends host adaptor, which was an ICD AdSCSI+, which I thought I had, now I'm not so sure...

I've tried every combination of address/SCSI termination known to man, and I know think I've bought another dud combination. Does anyone know of any reasons (failing a bust hard drive) that could be causing this?

The fujitsu is a 340 meg full height drive if that's any help.

Any help would _really_ be appreciated..

TIA.

Paul.

*** NEW 540MB SCSI HARD DRIVE SUB-SYSTEM FOR SALE ***

I currently have one 540MB SCSI HD System for sale. This is for the Atari ST/STe/TT computers. This is a NEW hard drive in NEW hard drive case. I will warrant this system for full year. After that the manufacturers' warranties on the hard drive, case, and host adapter apply. If there is enough interest, I may be able to get more of these systems.

Why buy used drives when you can get a NEW one today for only $450.00 shipping included? (COD $5.00 extra) ^^^^^^^

Here are the specifications:

o ICD FA-ST Hard Drive Case
o under-monitor designed case w/adjustable legs & fan
o DMA input and output ports
o external ID-switch
o external SCSI connector for further expandability
o internal expansion for second 3.5" SCSI HD

o ICD AdSCSI Plus ST Host Adapter
o full SCSI command set
o parity bit generation
o dual mode DMA daisy chaining
o battery backed real-time clock

o ICD Hard Drive Utilities

o Quantum 540MB SCSI hard drive
o low profile 1" x 3.5" form factor
o 12ms average seek time
o 4MB/s max. transfer rate
o 256K cache buffer

If you are interested please leave me e-mail here or at the following addresses:

From: d92jk@efd.lth.se
Message-ID: <3l6f4f$rjc@nic.lth.se>
Source record: 26941

I still haven't got Linux to work with my falcon. I have tried with patched versions of both 0.9pl4 and 0.9pl5 but it always hangs at the partion check.

This is what it says:

```
Linux/68k version 0.9.5 (root@Falcon)#1 03/11/95
Probing harddisk(s):
hd0: AREAL A170
cyl 672, sector 50, head 10
hd1:
cyl 13008, sector 13008, head 13008
Partioncheck:
HD-controller reset
Kernelpanic: Trying to write bad sector
In swapper task - not syncing
```

The hd1 is very strange since I have only got one ide drive and it hasn't got 13008 heads.

My setup is: Falcon030, 4mb ram, 170mb ide harddrive, 68882.

Any help would be much appreciated.

Johan

Hi,
this is not quite right: the Falcon has no problems at all with IDE drives -
the Falcon has Problems with SCSI drives. So the above mentioned config
should run with no problems. But in my experience X on a unaccelerated
Falcon is very slow. And with only 4 MByte RAM and constantly swapping it's
a nice demo, but not for working. On a TT with 32 MHz and enough TT-RAM
maybe it's a different thing.

I have a Falcon also, but with 32MHz CPU and 16MByte TT-Ram. Unfortunately,
there is a kernel bug in the current distributions that prevents Falcon users
from using their TT-RAM :-(((. But I hope there will be a fix soon :-)

Greetings,
Thomas

1274. ICD Host Adapter questions

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-27 14:00:17 UTC
From: jahronch@koptss03.delcoelect.com
Message-ID: <3l6gdh$i3c@kocrsv08.delcoelect.com>

I have been using an ICD host adapter that I bought from a previous owner, probably manufactured in 1989 or earlier. I have also downloaded the latest versions of the ICD utilities (ICDBOOT version 6.5.? I think).

When I boot the 1040ST, ICDBOOT starts up from my original hard drive at SCSI id=0 and reporst an 'unknown SCSI device id=3' (that's the Quantum LP80S drive that I am attempting to add. The other drive still works fine. None of the other utility programs will even report that there is a device at ID=3, so I can't format it.

Can anyone offer a solution to the problem? Is the Quantum drive incompatible with the ICD host adapter? Is there a software answer to this problem?

If this happened to me, I would simply buy a standard PSU, as made for a
PC, and stick an adaptor on that. If you were thinking of updating to a
tower case, many of these come with suitable PSU's inside!

It should not be too difficult. Usually the black is ground, the red is 5V
and whatever is left is 12V.

1277. Floppy drive problem (still!)

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-27 19:46:02 UTC
From: dhbutler@magnus.acs.ohio-state.edu
Message-ID: <3l74lq$6g9@charm.magnus.acs.ohio-state.edu>
Source record: 26945
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

OK, here's the problem I'm still having. I've got one good floppy drive, but it's external, and therefore drive 'b' on my mega 4. That's fine for most of the things I do on my machine anymore, but the problem is that the dang thing is now completely ignoring the fact that drive A exists at all, and, when it things there is no drive a at all, it for some reason assumes there is no drive B either! In other words, 99% of the time when I boot my drive A light never even flashes, and, when this happens (when there is no drive activity whatsoever), then I also can not access drive B (it tells me to insert disk B into drive A) either. I've already tried programs such as drivert (which does absolutely nothing at all on my system, go figure).

So, I was hoping so hardware-knowledgable person out there might tell me exactly which wires to ground or put to 5volt (or to 12 volt in the case of the power cable of course) in order to simply suggest ever so nicely to my ST that drive A is in fact connected but that there is no disk in it. That is, if I just remove the friggin' drive and run some jumpers to tell the st "Here is Drive A, it exsts, but there is no disk in it" (that way it won't try to access drive A on bootup until hell freezes over, which is what it does now).

The instruction will have to be in very plain english. I can solder or simply jump from one pin to another in the cable, but you'll have to tell me exactly which pin number to jump to which pin number and how to tell which pin number is which (unless it is clearly marked of course, but I have not checked that...)

Thanks a million!

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm please to announce that Speed of Light 3.7 is now available.

Since I can't seem to get into atari.archive.umich.edu (or msdos), I am thinking about posting it uuencoded to comp.sys.atari.st. Any objections?

If you have a favorite ftp site, please let me know and I will try to upload it there as well.

Cheers to all,

Stuart

Here is a list of changes in version 3.7 from version 3.5:

Changes in version 3.7 from 3.5
==========

-=> "New" now works when using Selectric Fileselector or wildcards. The first file replaces the current one, and all the others are added to the end of the image list. If you are using Selectric, you can also select multiple files to load at one time.

-=> Slideshow feature was added to automatically flip through the images in memory. Control direction, wrapping, start image, end image, and display time. Hidden drawing supported. And for more power...

-=> Speed of Light now supports a powerful scripting language for customized slideshows. You can write your own Speed of Light Scripts (.SLS) from scratch, or simply let SOL write them for you by recording your actions. When using slideshow scripts, you can even load and uncompress images in the background while viewing the last image!

-=> Speed of Light can now be run from resolutions with less than 16 colors (monochrome too!). The color editor and filtering may not be used, however. You can now use SOL from Medium resolution, and still display in Low resolution (on STs). Monochrome users can now also use SOL (with dithering, of course.)

-=> Lines (for clipping and zooming) now look right in monochrome and 4 color modes.

-=> GIF uncompressing time now takes 85%-90% of the time SOL 3.5 took.

-=> You can now have the screen be blank when drawing the images so they appear instantly. Great for slideshows.

-=> Dithering was changed slightly to provide an easier user interface and support for future updates.

-=> Some user interface improvements like tabbed dialog boxes.

-=> Fixed some bugs in DSP JPEG code from v3.6.

-=> SOL now loads GIFs with local color maps without complaining.

-=> Other miscellaneous bugs fixed (you'll be amazed)!

Changes in version 3.6 from 3.5
==========

-=> Added some DSP support code in the JPEG routine for the Falcon to make decoding faster. Greyscale and fixed colormap take 3 times more memory than without it, though. Still can use CPU decoding if out of memory or no DSP.

-=> Bug fixed that made STs and STEs bomb when switching to greyscale.

-=> Picture information box was added to the bottom of the screen while loading to give information about picture size, type, and number of colors.

The PC power supply is a rather larger than an ST one, and the
hole that would need to be cut in the lid of the ST to accomodate it could
be a little unsightly, IMHO :)
When many PSUs expire, it is often the main pass transistor only that
has died. Look for blackening around any large three (or more) legged
components, or cracking of the plastic package. If you can find the dead
component, try replacing it (or getting someone with soldering ability
to do so). If it doesn't work, you haven't lost out, if it does, Bob's
your uncle :)

>components, or cracking of the plastic package.

Or that big capacitor. Problem is, by the time you've replaced all the possible components it would have been cheaper to have bought a new PSU. :[

Moving into a tower is a good idea if you were also thinking of getting a [bigger] hard disk soon -- bare SCSI drives are a lot cheaper than ones in a case with own PSU -- otherwise I think replacement PSUs are not hard to come by, from the usual mail order suspects. (original poster was in Sherwood Forest, I think? Have a browse through the ads in STF or what-ever).

: be used?

I tried such a configuration a few years ago, and it worked fine. I even
know of one manufacturer who sold MFM drives along with an RLL controller
and obviously got by with it 8-)

The only people who really have solid data on such a configuration are
the controller and drive manufacturers, of course. I haven't seen
a direct comparison on data reliability, though. When in doubt, I'd
rather move off long-term data of the souped-up MFM drive or increase the
backup frequency.

1292. Problems with Host Adapter

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-28 14:36:50 UTC
From: David L Watson <dw4g+@andrew.cmu.edu>
Message-ID: <YjS1w2a00YUp03NYUu@andrew.cmu.edu>
Source record: 26956

I am having problems with getting access to a hard drive and was hoping that somebody has seen this problem before. The basic system is a Mega ST, SLM804, 50M HD with an Advantage ST host adapter (I assume the drive is SCSI, but I might be wrong about this), and a megafile 20. I've pretty much isolated this problem to the 50M HD. If I try to boot the system with only the 50M plugged in, it doesn't read the hard drive and loads up with the standard desktop without any disk drive icons (This is TOS 1.2, so I can't install any if it doesn't give me any to begin with). If I try to boot without the drive plugged in, I get the drive A and B icons so I can try to run the ICD boot software, but as soon as I plug in the HD again, the computer can no longer access the floppy drive. If I just try to boot off of the megafile, things seem to work fine.
The only thing I can think of that would cause this problem would be a problem with the host adapter. This entire setup has been working fine for several years, so it shouldn't be a bad connection. Both computers have been somewhat flakey over time, so it could be something wrong with both computers, but that seems unlikely.

Thanks,
David Watson

: If you have a favorite ftp site, please let me know and I will try to
: upload it there as well.

: Cheers to all,

: Stuart

: --
: Here is a list of changes in version 3.7 from version 3.5:

: Changes in version 3.7 from 3.5
: ================================

: -=> "New" now works when using Selectric Fileselector or wildcards. The
: first file replaces the current one, and all the others are added to the end
: of the image list. If you are using Selectric, you can also select multiple
: files to load at one time.

: -=> Slideshow feature was added to automatically flip through the images in
: memory. Control direction, wrapping, start image, end image, and display
: time. Hidden drawing supported. And for more power...

: -=> Speed of Light now supports a powerful scripting language for customized
: slideshows. You can write your own Speed of Light Scripts (.SLS) from
: scratch, or simply let SOL write them for you by recording your actions.
: When using slideshow scripts, you can even load and uncompress images in the
: background while viewing the last image!

: -=> Speed of Light can now be run from resolutions with less than 16 colors
: (monochrome too!). The color editor and filtering may not be used, however.
: You can now use SOL from Medium resolution, and still display in Low
: resolution (on STs). Monochrome users can now also use SOL (with dithering, of
: course.)

: -=> Lines (for clipping and zooming) now look right in monochrome and 4 color
: modes.

: -=> GIF uncompressing time now takes 85%-90% of the time SOL 3.5 took.

: -=> You can now have the screen be blank when drawing the images so
: they appear instantly. Great for slideshows.

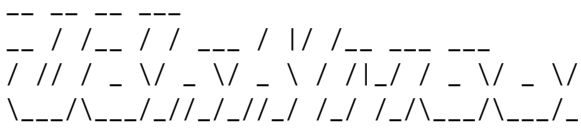
: -=> Dithering was changed slightly to provide an easier user interface and
: support for future updates.

: -=> Some user interface improvements like tabbed dialog boxes.

: -=> Fixed some bugs in DSP JPEG code from v3.6.

: -=> SOL now loads GIFs with local color maps without complaining.

: -=> Other miscellaneous bugs fixed (you'll be amazed)!



: Changes in version 3.6 from 3.5
: ================================

: -=> Added some DSP support code in the JPEG routine for the Falcon to make
: decoding faster. Greyscale and fixed colormap take 3 times more memory than
: without it, though. Still can use CPU decoding if out of memory or no DSP.

: -=> Bug fixed that made STs and STEs bomb when switching to greyscale.

: -=> Picture information box was added to the bottom of the screen while
: loading to give information about picture size, type, and number of colors.

>Any help would _really_ be appreciated..

Make _sure_ you have turned parity _off_ on the drive !!!
I would assume you have an early ICD adaptor that doesn't support parity
your friends adscii+ obviously does as the drive works on it.
termination should be used only on the last drive in the scsi chain.

Further which driver software are you using I think ICD version 6.0.6
was the last free update available.

On my Fujitsu parity is disabled by pins 9-10 being open circuit
NOTE MY DRIVE COULD BE DIFFERENT TO YOURS however I'll put a bet on it
being some part of the jumpers in connector CNH1 .

Source record: 26974

You could probably take the memory out of one and put it in the other but it is not advisable - you would have to unsolder the memory and resolder it in the other computer. Unless you were EXTREMELY careful, you could count on the removed memory getting overheated and/or zapped by static electricity somewhere along the way.

An easier route for memory chips would be to buy or acquire an old XT motherboard with socketed memory (640K). You can get these things for next to nothing (or even free) where I live and the memory chips can be used in your ST.

Files on how to do the upgrade can be found on the GEMini CD-ROM and, most likely, on BBS's around the globe.

P.S. This hardest thing about this type of upgrade is making sure you don't zap the memory. Be VERY careful when handling the chips and the motherboard.

Source record: 26975

You can try this because it worked for me:

Clean and reseat your Video Shifter chip and your GLUE chip (taking special precautions against static electricity discharge). If this doesn't help, you could try "piggy-backing" a good 68000 chip over the existing one to see whether the situation improves.

Nine times out of ten, though, it's the GLUE chip and oxidation of connecting pins.

You could also try reseating the other square Atari chips.

Hope this helps.

Randy Kwak

I don't have the same hhd as you have, but I think, the disfunction cause will be NOT the SCSI-adresses, but either the parity-check (must be switched OFF for ICD-Adaptor) or the SCSI-resistor-arrays. So try to find out, what's the jumper to disable parity-checking or/and plug in resistor-arrays. I had some problems with a quantum 540MB hhd in a Atari TT, even the floppy-drive didn't work anymore, when I had built in the quantum. Then I had the idea after some hours to plug in the R-arrays and now the TT is working.

I hope I could help you with these hints.

Longer time ago, I had a similar problem: the reason of such problems
may the floppy-driver built inside the Mega-ST: it may be too weak to
be used with 2 floppydrives. So you have to buffer your signal and then
it should work!

>really want to solder all 25 up because of the hassles of getting 25-core
>cabling, et al...

I think you'll probably have problems with that Paul. Standard
non-differential serial ports on computers aren't much good beyond a couple of
metres in my experience. What you need is a couple of drivers. These convert
the single ended signals to differential, and will drive a hundred metres or
so.
There's no harm in trying a 10 metre lead first though. I'm not
sure how many wires you will need to hook up. It probably depends on the
type of modem you're using, in which case you should look in the manual,
and if necessary, contact the manufacturer.
If you do need a driver, and can't get hold of one from anywhere
else, I can supply you with circuit diagrams if you are capable of making
your own. Good luck.

> Anyway Regards

OK, I am using 4MB Falcon with 65MB IDE drive and 68882 FPU. I have not
used bootargs since I first tried pl3 about a year ago. I stopped worrying
about boot res with pl4, which didn't seem to mind. Both versions gave
HD controller reset errors which looped - to infinity?
Aside: I have observed that when I type in -r filesys.new in the dialogue
box, linus reports a command line of "". To make it load I have to type
r filesys.new ie omit the leading -.
Anyway, I was quite optimistic when pl5 was released as it was claimed that
the IDE problem was solved at last. On trying this, I was faced with a
corrupted coloured screen, whatever resolution I tried. I read a posting
to that effect in this group, I think.
Two more patches were then advertised as working, supposedly stripped of
amiga code. Again I was lured, only to find that both restored the HD
controller reset. Again both are happy to deliver me to this condition
regardless of resolution.
I remain linuxless. Hope you can help, TIA,
Ian.

: RAM card. Do you know anything about the Speed Res or a possible source for a
: RAM card?

Hi Dan,

I have a Mighty Sonic. It was not cheap, but it's very good! With this Card,
my Falcon is even sligtly faster than a TT! (If you don't look at the FPU.
But since the FPU is totally asynchrone, I have one clocked with 40MHz inside
my Falcon. :-))

Back to the Mighty: the problem is, it is not produced any more. :-(((So, if
you can get hold on one, get it!!! The advantage of a Mighty Sonic is, that
there is a "real" 68030 on it with all its adress and data pins. So you can
adress more than 16MBytes RAM, and the Data bus can be 32 Bit wide. That's
the reason why the Mighty really accellerates the Falcon. Only clocking the
CPU higher doesn't bring much performance.

AFAIK, there are one or two firms here in germany planning to produce a
RAM card. But they are not on the market so far. These RAM cards are
intended for the Falcon Graphic cards now available (there are at least 2
different (?) solutions). It seems that the NOVA Graphic Card for Falcon runs
nicely together with the Mighty Sonic. About other combinations of Hardware
I don't know. If you need some information about special combinations, I could
ask in the german Maus-Netz, there are many people with many different
hardware configurations.

Greetings,
Thomas

With Pfork it won't! The parent process will be suspended until the child is
completed. With Pexec you can start a child process that will run parallell
with the parent. The blocking Pfork call of MiNT is a problem...

Well, last time I looked at the MiNT source the parent process was
really suspended. This is one of the places MiNT differs from UNIX.
And as such a place to work at with ports...

Gerco.

In article <D5ryM6.Gu8@sdf.saomai.org>, (Evan Langlois) writes:

] Is it true that the 56001 DSP can execute 3 threads of execution
] simultaneously? I heard that the DSP has an average instruction
] execution time of 1 cycle - does this take into consideration the
] 3 execution threads, or can I actually get 3 instructions per cycle
] by using 3 different execution threads?

It is true that the 56001 can execute three instructions at one
time, but there are many restrictions to this, and I would certainly not
say it can execute three 'threads' at once.
The 56001 has three memory areas - Program space, X memory, and
Y memory. Data can be moved in each of these three spaces, or from register
to register in one cycle. This is where the three instructions per cycle
thing comes from. However, it is quite rare that a program will be in a
situation where it can move three items of data at a time, although if
you are programming in assembler it is worth rearranging your program to
try to do this as often as possible. The first restriction, therefore, is
that at least two of the three parallel instructions *must* be MOVE types,
and so one line of assembly could look like this:

```
add X1,A, X:(R0)+,X0 Y:Y1,(R4)+
```

where an instruction is executed in parallel with an X memory
move and a Y memory move.
The second restriction is that the instruction in the example above
is one which allows parallel moves with it. Many of the 56001's instructions
do not. In general, it is the MOVE and arithmetic instructions that do allow
parallel moves.
Note that the 56001 instruction set is nowhere near as versatile as
the 68000's. It is harder to write in 56001 assembler. Each instruction
has many restrictions as to which registers it can be used with for example.
There are far fewer addressing modes, and of course all the maths is done
in fixed point, not integer, which can make some applications harder.
Remember it is designed for one purpose - very fast signal processing, and
that is what it is good at.

As for average instruction execution times, most instructions do
take one cycle, but some take two. For example:

```
move R0,R1 takes one cycle, but
move #$123456,X1 takes two because the instruction opcode takes
```

one cycle to load, then the immediate operand takes another.
Thus the *average* instruction execution time will be slightly more
than 1 cycle per instruction. Exactly what it will be depends on the program

that is running. Branch instructions can also take more than one cycle, but loops can be implemented which do take just one cycle per instruction, even with the branch at the end.
This doesn't take into account the parallel move instructions, so, theoretically, the 56001 could average three instructions per cycle if your program never branched, and two out of every three instructions you wanted were moves in separate memories! Unlikely I'm sure you'll agree. It depends whether you call the parallel moves 'instructions' really.
Note also that the cycle time of the 56001 is half the clock period. Thus the 56001 in the Falcon, clocked at 32MHz, can execute 16 million lines of code per second.

] Does anyone have a neural net simulator? Preferably in 56001 Assembler,
] or maybe C. There is an application I want to experiment with and I'm
] wondering if the Atari Falcon will be fast enough for it.

I don't know a great deal about neural nets, and I don't know if a 56001 assembly language implementation of one has been written, but from what I do know, I would imagine that it would be much easier to implement on a 'normal' microprocessor. I can't see that a DSP would be any better at it. However, saying that, it would certainly be capable of it. It is, after all, a very fast processor, but if speed is not quite so important, you'd be better off programming the 68030, or writing in C, for this particular application.

Hope this gives you some guidance.
Paul Hills

> I'll try again:
> CAN SOMEONE HELP??

Does anybody know the LACOM adaptor? It is a ACSI<->SCSI host adaptor, that has an internal and an external SCSI-bus. It was mainly designed to connect a ST and a sampler to the same SCSI-device. I have this adaptor and it works (ST on one side, PC with Adaptec on the other).

But there are two problems:

1. As the LACOM scedules the SCSI-commands to avoid bus collisions, but does this only with disk commands, I had to disable this sceduling (by shortening the bidirevtional driversbetween internal/external SCSI), when I wanted to use a streamer.
This sceduling is necessary, because in an ACSI system, the ST is allways the bus initiator, so if the ST wants to access the bus, he doesn`t look, if it is already occupied. In SCSI, every device can be the initiator.

2. If you want to use the same partition with two computers permanently, there has to be a way, to tell computer two, that computer one has changed say the FAT, abd that the buffered FAT in computer two is no longer valid. So ther has something like "media change" to be generated to keep cache coherence ...

So this adaptor might be a solution to your problem, if you don`t want to use the partition with two computers _all_ the time.

Hope this helps ...

Phil

1325. Speed of Light 3.7

Newsgroup: comp.sys.atari.st.tech
Date: 1995-03-30 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <3lejqt$ha7@pacifier.com>
Source record: 26990
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Stuart,

I just obtained the latest Speed of Light 3.7, and am a registered user.

Some time ago, I wrote a utility titled "RUNLOW" that allows you to run Low Resolution programs from medium resolution. It was originally inspired by SOL's Low Resolution requirements on standard ST's. It has worked great for all versions up to 3.5.

However, something has changed in 3.7 that prevents RUNLOW from operating correctly. As many ST users use RUNLOW to launch Speed of Light, I would like to devise a solution to this problem...

Therefore, I was wondering if you could tell me any system variables, memory addresses, OS calls, etc. that the new version uses but the old version does not?

Version 3.7 doesn't come up with proper color scheme, and doesn't display pictures properly when used with RUNLOW.

Any assistance would be appreciated.

I personally went back to 3.5, because switching to Low Resolution is too much of a hassle for frequent use...

By the way, I like the addition of .IMG file support. .GEM support would be a nice addition for future versions!

Thanks,

Anthony Watson

You'll need DUET100.LZH (there's a separate english manual also available)
and two MIDI-cables. With DUET you can network via MIDI, Serial, Modem and
LAN-ports. And it's shareware!
I think I found it from ftp src.doc.ic.ac.uk (cd pub/packages/atari/umich/)

Taking apart my Mega STe to give it a thorough dusting, I noticed
that the power LED cable (which hasn't been working) had come unplugged.
Does anybody know where the power LED indicator plugs into on the Mega?
I've searched the board for a outlet and can't find one. Thanks!

Well, maybe it doesn't like "flicker mode." Try turning it off. It works great in 800x600x256 with Falcon Screen on my Falcon. What EXACTLY does it do? Do the dialogs look right?

: 'Part from that, first impressions very positive.

Thanks!

If you don't need low profile, you can buy adapters which will convert
PLCC to PGA. If the number of pins is small enough, a standard PLCC
socket will usually map directly onto the PGA equivalent.

From: aa860@cfn.cs.dal.ca
Message-ID: <D6Dy5r.319@cs.dal.ca>
Source record: 26906

I have just bought Atariworks but am mystified by its instructions for defining a report in the database. The manual says that after establishing a page setup I will see margins and page breaks in my window, and I don't.
It also Implies that report definitions get saved but doesn't say how to recall them, or if there can be several and if so how to recall different ones. Any help would be greatly appreciated as the interaction of the database and the word processor was the feature I was looking for, but plain database management seems like an essential first step!

1345. Getting Linux to boot from ext2 partition

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-03 00:00:00 UTC
From: asx@bix.com
Message-ID: <3lnt8s$qef@news2.delphi.com>
Source record: 26914

I got a hold of the latest release of the boot program and the kernel for Atari Linux and I've been successful in extracting the usr.tar.gz and root.tar.gz files onto my Quantum LPS240S drive with 200Mb for root, 30 for swap and 10 for temp stuff.

I can boot up from the ramdisk image fine and use the system from then on. I modified my fstab as follows:
/dev/sdb1 / ext2 defaults
/proc /proc proc defaults
/dev/sdb2 none swap swap

I also extracted X11r6 and placed the drivers, etc. in the right place. I also modified my inittab file to read:
tty1 --- etc. all others have been disabled.

What happens is that I get all the way to the NET: prompt (at which the boot process enters inetd and proceeds) after which I end up with the login proompt and the end of the line. I can type stuff here but it produces nothing my garbage (if I press the CTRL, ALT keys) and echoes the rest.

I would appreciate if someone could post their fstab, inittab, and whatever else is relevent with explanation (breif?) so we can get our systems up and running.

Thank you.

I have a TT030 with TOS 3.06 2+4MB RAM, One Quantum 540S (my TOS and boot drive) and a Quantum LPS240S as exclusive Linux drive (formatted using the ramdisk image tools.)

1347. Speed of Light 3.7 RELEASE B

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-03 00:00:00 UTC
From: sdenman@wolf.cs.washington.edu
Message-ID: <D6G76L.FEJ@beaver.cs.washington.edu>
Source record: 26916
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

That's right folks! There is yet another release of SOL 3.7, release B.

This fixes another serious bug that prevents a select few registered users from registering with their old keycodes. Release B works fine with these, but older versions would reject a very few of the keycodes accidentally.

So, you can get release B from my WWW Home page:

http://www.cs.washington.edu/homes/sdenman/

or from some ftp sites, but it probably won't be out yet. I'll post a small list later on.

If I could have everyone's help to replace all those old versions with this new release B, that would be great! Somebody could upload it to a bunch of ftp sites, and Genie, Compuserve, CIX, etc.

Please also Email me if you would like a uuencoded copy mailed to you.

Sorry about all these bugs, I'm just glad I can fix them so quickly.

Message-ID: <gigxr01-0304951924470001@ngalm099.gal.nt.com>
Source record: 26925

There is a file on a.a.u.e which is a do-it-yourself overscan modification
for the ST models before the STE.

The file contains all the information, pictures & software needed.
I think it's called OVERSCAN3.

There is a commercial version called AUTOSWITCH-OVERSCAN which used to be
available, not sure if it is anymore.

The basic hardware trick is to change the timing on the Display Enable
(DE) line to allow more memory to be addressed. A small software patch
sets the resolution.

For STM's only a bit of track cutting & soldering is required.
STFM's need a small transistor circuit (cheap) to produce the correct pulses.

How about somebody who has done this commenting on how effective it is?

Nonsense! I have had a serial cable going across my room, along the landing,
down the stairs, through the hall and halfway across the study :-) I must
confess that I didn't use it for long but it worked while I was using it.
Surely if 5V centronics can go 5 metres (allegedly) then 12V serial can do
at least 10m?

> Help!

Well, I'm using a Moniterm Viking too, but then again I have a TT... Too bad, the Falcon can not create the high frequencies which this monitor needs (71 Hz vertical refresh and about 70 kHz line frequency) The dot clock frequency is more than 100 MHz (!) and finally the video signal has to be ECL level (two wires a '+' and a '-')

But I suggest you try selling this monitor to a TT user (Linux and X-Windows is great on this tube !!) and buy a good VGA monitor (15" or better 17"). With Blowup you can do high resolution and have color too.

SICK FALCON030, WHERE ARE MY FILES??

It was a sunny Saturday morning, I switched my FALCON on like I've done 1000 times before, and to my horror, it crashed {4 bombs} while booting up. (Please read on, it gets worse!)

I tried warm starting several times, but it crashed {4 bombs} each time. I tried cold starting several times, it did the memory test ok but then crashed {4 bombs} each time.

So I booting from floppy (i.e. without the harddrive). I tried AHDI several times, but each time I got the following:

```
Loading...
-----------------
Atari Hard Disk Driver
AHDI 6.06 June. 2 1993
-----------------
Doing programmed I/O for IDE:
IDE devices:
Unit 0 - <<<<<<crap>>>>>>
SCSI devices:
Unit 0 - Not responding
-----------------
NOT bootloaded
```

Where I've put "<<<<<<crap>>>>>>", there always used to be a 6 digit code, but now there's a line of strange characters.

As well as AHDI, I also tried HINSTALL, which wouldn't let me install or remove. But the system info (time/date/chipset/etc) all looked ok. It read files from floppy ok, and executed code (from floppy) ok.

Next I tried to reset the NVRAM, (it seemed like a good idea at the time!). It did something, because AHDI then *did* work (started harddrive). The FATs and directories look in tact at this point, though I didn't do a complete test.

Then I tried rebooting, and it's now totally buggered since the reboot! It powers up, the ATARI symbol is buggered, but it memory tests ok, but it neither boots harddrive nor boots floppy {2 bombs}.

HELP!! Can anyone suggect what might be wrong? Has anyone got any details about the NVRAM, or details about the _exact_ sequence of events on powering a FALCON up? What does "Doing programmed I/O for IDE" mean and do? How much is it going to cost to repair, and what's the chance of saving the harddrive?

And help would be appreciated! If anyone would like a UUencoded, postscript summary of the above message, please Email me (at jrc1@axprl1.rl.ac.uk).

Thanks for your time,
James

If I remember correctly, I think it's back by the hard-drive bay.
I could be wrong. Haven't toyed with the inside of my Mega STe in a while.

Hope this helps!

HM>

I'm not sure what you mean with early, but mine is from 1990, (i think), and
it ignores parity.
I'm not aware of any change with this on newer ICD Adscsi+ adaptores, so
you may be right on this one. I just know ICD chose to skip the Adscsi+
a few years after i bought mine. (and a very stupid choice from ICD in my
opinion).

Source record: 26847

Re: Max RAM for an ST...

The maximum amount of memory an ST computer can address is normally 4 Megabytes.

This is caused by the design specs of the Memory Management Unit chip, which doesn't have enough pins to address any more memory than that.

If you try to access memory above the 4 Mbyte limit, the MMU generates a buss error and crashes the system.

There have been various attempts to get around the limit with addon hardware, there may even be something available from Germany... but the general answer is that 4 Megs is the limit.

>Is it possible? I have the - vague - impression that both the TT and
>the Falcon have something called ST-RAM, size 4MBytes. Is this the
>maximum that a MegaST4 can handle?

Normally yes, but with TOS 2.06 you can put in extra RAM and tell the
operating system about it. It can then be used like TT ram on a TT.
The TT's MMU chip can handle up to 8 (16?) Mb of ST ram but this is hardly
ever used, TT ram is much faster as it is not shared between the screen and
the processor.

>Sakari Aaltonen | Linux is an ftp-able Unix clone for 386/486 PC's.
>sakaria@vipunen.hut.fi | Boggles *my* mind, it does.

Linux is also available for TT and Falcon !!

> I see Compo sells a kit for about 50 ukpounds, but have also heard of
> a PD solution. Which is more compatible with most GEM applications
> (or for that matter X11 under Mint?) or do they both do exactly the
> same job?

Well, the Compo one is an `autoswitch' OverScan. Apart from having
nicer software and presumably a more reliable mod, you can make a list
of `unclean' software (like Tempus) that dislikes having a
non-standard screen size. Whenever you run a program from that list,
Overscan automagically disables itself until the program exits. Works
great. There are a lot of other options installable in the config
file too.

Regards,

1371. Setting text colours on the Falcon.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-04 00:00:00 UTC
From: "G.R.Keen" <G.R.Keen@dcs.hull.ac.uk>
Message-ID: <3lr1ia$8l@wimbledon.dcs.hull.ac.uk>
Source record: 26932

Hi,
can anyone out there please help me?

I need to know the differences between setting the colour of the text
on an ST, and a Falcon.

The usual 27,"b" and 27,"c" for setting the background, and foreground
colours appears to have NO effect on the Falcons text colours.

Even when I run my program using Backwards, the colours are still
wrong!

Any help/suggestions would be greatly appreciated, but it would greatly
help if I could get an answer today!!!

THANKS
Glenn

Message-ID: <D6HI82.C9y@news.hawaii.edu>
Source record: 26934

If there is anyone out there that has Cubase Audio Falcon, I would greatly appreciate if you could scan or photocopy the appendix regarding audio modifications to the Falcon (removing bass boost, lowering mic input to line level). I am currently debating whether to modify my Falcon and purchase Cubase (since Atari indicates that the modifications are only necessary for Cubase compatibility). I need to have my technical personnel have a look at the appendix in order to find out how much it will cost to make the modifications. Please E-mail me if you think that you can help, and I'll get my address to you (or you can e-mail the modification instructions in UUencoded form).

Thanks,
The Borg

: find it.

Ataris read and write DOS format. Just make sure that you have at least
TOS 1.04 in your Atari (which has improved DOS compatibility). You can
read those disks directly in just about any Mac or PC nowadays. On
UNIX systems, use some DOS filesystem tools.

From: Ton van Overbeek <tvoverbe@wk.estec.esa.nl>
Message-ID: <3lqq8v$b55@info.estec.esa.nl>
Source record: 26937

I had the same problem when starting with Linux.
The problem is that a keyboard translation table is loaded which is
totally useless on an Atari. I guess it came from an Amiga.
Boot your ramdisk image and mount your /dev/sdb1 somwhere, i.e. on /mnt.
Look through the /etc/rc* files (the startup files executed at boot time)
and try to find the setup for the keyboard translation tables.
Disable that and it should work. I am typing this at work and do not have
my Linux TT at hand, so I hope this info is correct.
Good luck with Linux-68k

1377. Re: RLL/MFM drives

Eems , J.P. van der (eems@nlr.nl) wrote:
: That depends on the quality of the MFM drive. A RLL drive is nothing more
: than a high quality MFM drive anyway.

Depends on how you define "high quality". RLL also requires the drive
electronics to run at higher frequencies, so an RLL drive might have
completely different electronic parts (of *different*, but not necessarily
higher quality) in it. So yes, there is a risk in such a configuration,
but I would give it a try anyway.

1378. Re: 56001 DSP

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-04 00:00:00 UTC
From: cgra@se.bel.alcbel.be
Message-ID: <3lr9rf$25d@btmpjg.god.bel.alcatel.be>
Source record: 26939
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.next

SFAIK the 56k has only one _external_ memory bus, and hence can only fetch one external word at a time. p554mve@mpirbn.mpifr-bonn.mpg.de (Michael Elst) explained it to me like this:

\begin{quotation}
In comp.dsp you write:
>(all addresses off the top of my head, on-chip ROM/RAM omitted for
>simplicity). My question is: does this imply that the DSP will only
>be able to reference one of X, Y and P per instruction cycle?

No. Independent of address mapping you will find that external memory can only be accessed serially (there's just one bus anyway). If an instruction accesses several memory spaces then _one_ access can happen on the external bus without any penalty, multiple external accesses will need extra cycles (and there's a fixed priority in which pending accesses are finished, I think that's X and then Y and then P).
\end{quotation}

I can't help you there, but I do know that it is very easy to install a
switch that allows one to switch between internal or external drive A.
Basically, you cut and cross-connect two pins on the Yamaha sound chip.
You can install a small switch to allow you to select which order you want the
drives to appear, or just hardwire it. Full instructions are on
atari.archive.umich.edu, probably in /Misc. Let me know if you have trouble
finding them.

Hi,
I'm trying to do a friend a favor which has no internet access,
here goes :
We have:
-1 40 Mb SCSI drive (a Quantum 40 S)
-1 ATARI with SCSI port on it (25 pins D connector type).
-1 guy which knows a lot about electronics and nothing about Atari (That's me)

The question is:
What do we need to run the harddisk on the atari
regarding Software (OS version, Type of OS, Diskinit tools ) ?????
(never mind the cables terminators and powersupply,
these are no mystery to me)
In short, how do I go about setting up the Atari
to have a bootable system on the SCSI disk ?

Please reply via email.

Thanks in advance.

OK, I have (fairly successfully) installed MiNTOS 1.4, and am using tcsh 6.03 pl3 and the GNU file utilities. I have the file utilities installed in a directory in my /usr/bin directory for ease of maintenance. The problem is, I can't figure out where the PATH environment variable is set. I can set it easily enough from the tcsh command line, but I'd like it to be set automatically to include /usr/bin/fileutils-3.9. I've looked all over the place, in all the csh.* files and rc.* files, and there's no indication of where the PATH (or any of the other variables) are set. I don't thing mint.cnf does the trick either.

Note that I'm logging in as root, and my home directory is completely empty.

THeo

There is a DOS utility (ST2DOS) which can make standard size ST DD floppies readable from DOS and leaves them still readable on the ST. I found this very useful in converting some old PD graphics disks which were not DOS compatible.

1387. Re: serial leads

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-05 00:00:00 UTC
From: BobR <76702.1466@CompuServe.COM>
Message-ID: <3luuvo$a71$3@mhade.production.compuserve.com>
Source record: 26856

The serial port drivers on the Atari ST are standard serial drivers, so there shouldn't be any problem driving a fairly long cable. I don't know what the absolute maximum length would be, but 10 meters shouldn't be a problem.

As for the number of wires needed, a full 25 wire cable is seldom, if ever, needed. The bare minimum is three wires, on pins 2, 3 and 7, which provides Transmit, Receive and Ground.

For hardware handshaking, more connections are needed, depending on the protocol desired. It should be possible to buy a ready-made IBM compatible 10 meter serial cable already set up for RTS/CTS handshaking fairly cheaply.

1391. WWW browser (maybe I'll write one)

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-05 00:00:00 UTC
From: sasmesba@kingcong.uwaterloo.ca
Message-ID: <D6KwDK.EwB@watserv3.uwaterloo.ca>
Source record: 26860
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello all,

With all the fuss about WEB browsers, etc. I think I'll tackle the job
of writing one (well, when I get more of my thesis finished). The thing
is I don't want to rewrite all the networking stuff avaialable under
MiNT/MintNet like SLIP,PPP interfaces and the approriate daemons and
even the 'chat' program. This stuff already works (and very well I might add)

So what this amounts too is a WEB browser that only runs under some GEM
system over Mint - ie MultiTOS (and Geneva as soon as Dan gets the Mint
compatibility out there). I don't have Magic - does anyone know if
Magic runs over Mint? I would like to write something accessible to
all Atari users - is it reasonable to expect most Atari users have
one of these OS's to use? GDOS would also be a requirement as there
is again no need to re-invent the wheel. I think most Atari owners
have access to GDOS and some fonts.

After showing people Chimera under Mint-X at TAF's ACE '95 show it is
obvious to me that there is an incredible amount of interest for a WEB
browser - most Atari owners I talked to had reasonable systems (ie 4meg
of RAM and a decent hard disk). Most, howver, would rather not set up
an X-windows system.

Let me know what you all think... when I have some time I will start
developing a strategy for coding. I would like to write something
that's relatively efficient so 8Mhz ST owners can enjoy browsing the
WEB and 48Mhz TT owners (like myself) can show off how much faster
our WEB browser is than those on other home platforms. (hey calamus wins
hands down for DP speed compared to anything on any platform).

There are 3 possible cases here:

1) Does not support parity.
2) Generates, but does not check parity.
3) Fully supports parity.

The original ICD's, Atari's, and others did not support parity at all (1).
These would not work at all with a drive that had parity enabled.

Later ICD's (I think the Adscsi+ is one), generated but did not check
parity (2). These will work with a drive with or without parity enabled.

No one has built any Host Adapters for the ST that fully support parity (3).
These would ONLY work with drives with parity enabled.

I have one big problem with a Seagate ST251 harddisk. It sort of forgets
that it=B4s been formatted.

I have replaced the Seagate ST225 inside my SH204 with a Seagate ST251.
I can format the new drive, can access the drive normally and everything
works just fine. At least as long as I don=B4t switch it off.

When I switch it off for a few minutes and then back on it doesn=B4t work
anymore. I have tried formatting it after a few minutes when the drive
is warm, I have formatted it when it=B4s cold, I have used ICD=B4s and Atar=
is
formatting software but nothing makes any difference. When I turn it off an=
d
then back on it doesn=B4t work.

To make this more interesting I tested the harddisk with a ms-dos machine
and it works perfectly. I can turn it off and on and it still works...

What is going on? Can I use my ST251 as a harddisk with my ST or should=20
I think some other uses for it?

Thanks in advance for any help.

]
] Nonsense! I have had a serial cable going across my room, along the landing,
] down the stairs, through the hall and halfway across the study :-) I must
] confess that I didn't use it for long but it worked while I was using it.
] Surely if 5V centronics can go 5 metres (allegedly) then 12V serial can do
] at least 10m?

I admit that my experience was based on using a PC to control a
Hewlett Packard XY plotter, in an (electrically) noisy factory environment.
I found that with a long cable, I couldn't have a baud rate much above 300
(start file plotting...cup of tea...go home...sleep...come back...still
plotting!).
It is possible that the Atari has a better serial port, which can
drive longer cables at higher voltages and currents (clone PCs tend to swing
only +/- 8 volts or so - at least the five types I have dealt with do).

Your comments on centronics and serial lines are a little over
simplified. The voltage of the protocol is not really relevant as long as
it is greater than typical noise voltages on the line. Centronics is a
synchronous parallel standard, that is the data is set up on the lines, and
a strobe latches it into the buffer the other end. Computer serial lines
are asynchronous which means they go at roughly the baud rate specified, and
the receiver (knowing the required rate) guesses where each bit is based on
when the previous start and stop bits are.

The distance the signal can reliably be driven depends on the current
capability of the sender, the capacitance (proportional to length) of the
lead, the characteristics of the receiver's port, the frequency of the
signal being sent, the amount of external noise, the characteristics of
the cable itself, and several other parameters.
In my original posting, I warned that he might have trouble, but
also suggested he give it a go. I'm glad that your setup with extremely
long leads worked fine, but to say my comments were nonsense based upon one
single test is a little premature, and simplistic.

To anyone trying a long, or weird, comms link, bear in mind there are
a whole multitude of problems that can occur. I've been dealing with high
speed (>1Mbaud) and low speed serial comms for years and it still hardly

ever works first time!. However, if you're not sure, give it a try, there's nothing to lose!"

>colours appears to have NO effect on the Falcons text colours.

I encountered the same problem with my Falcon when I was programming. The best explanation I could come up with was that those escape codes invoked Line-A exceptions on the ST, which are now no longer supported on the Falcon. Everyone else I talked to seemed to think that that was a reasonable answer, so I'm pretty sure that's it.

The best course of action I can suggest is either writing your own /dev/con driver for MiNT (or just a TSR to intercept Bconout(2) calls for normal TOS), or if you're programming (and not just trying to make fancy text documents), use a vst_color for setting the text color, and use v_gtext for printing the text to the screen. The latter approach is best, as it insures compatibility for all machines, operating systems, etc.

Source record: 26876

Hello,

About a week ago, my port of NetBSD for the atari was released on
sun-lamp.cs.berkely.edu. Until now, it runs on only 2 TT's. What I am
searching for are extra test sites (2 is too little to catch those little
differences between the hardware revisions). If you like to try NetBSD and
are not afraid to run into a few problems, and help me solving them,
please contact me by e-mail.
It would also be nice to have someone with a Falcon. As far as I know
the hardware is simular enough to work.
If you like to try it before reacting, take a look at the directory
"pub/NetBSD/arch/atari" on sun-lamp or the mirror site: "ftp.luth.se".
The latter is far more easy to reach from europe.

Leo.

1408. ST GEM relocation info and symbol table.

I have replaced the original FDD on my ST with one of the newer PC FDD. There was no problem, just plug in the power and the ribbon cables. I cannot remember the make of the replacement drive but it's one that I picked off the shelf from a PC shop.

There are some text files that explains FDD replacements, they are be found on aaue or other anon ftp sites, if you want to know more. I just replaced the FDD without reading any of those, but I know they are there.

Apparently some FDD have some jumpers on them, and you should try some combination of them if it don't work. Also see that you plug in the ribbon cable in right way.

I think it's a very VERY! good idea. It's about time someone start code
on a program which doesn't need Mint or X windows, as i feel many people
are having many problems with these programs.

Atari left these and others out of the vt52 emulation on the falcon030.
There is a patch program called DBCONFIX which will repair this, making the
Falcon's vt52 compatible with the STs. SHould be on most FTP sites or I can
email it to you.

Since some time I regularly get the message

STOP! The system is out of memory.

After this message I can carry on mostly, but windows that were
open are closed and not everything works any more.

I suspect there is a VIRUS in my system somewhere.

Is there anybody with the same experience or just knowledge
about this subject?
Please, come out and speak up!!

Henk

(BTW: I have a Mega 4 ST and TOS 2.06)

]
] I was under the impression that the 56001 had 3 busses to
] external memory. I thought that NeXT's had 3 16k word busses for
] their 56k's. The 21xx in my pc works as described above. If the 56k
] treats external memory the same way, would someone tell me before $800
] falls from the sky and I buy a used falcon.

The 56001 is capable of three external memory transfers per cycle,
one to X memory, one to Y memory, and one to Program memory. The Falcon
has three memory areas to support these (although they do overlap a bit).
The confusion may have arisen because each memory block (X, Y, or
P) can obviously only have one access per cycle.
Go ahead and spend your $800 (that's a bit much for a USED Falcon
isn't it?)

Petteri Tammisto (tammisto@pori.tut.fi) wrote:
: I have one big problem with a Seagate ST251 harddisk. It sort of forgets
: that it=B4s been formatted.

: I have replaced the Seagate ST225 inside my SH204 with a Seagate ST251.
: I can format the new drive, can access the drive normally and everything
: works just fine. At least as long as I don=B4t switch it off.

The SH204's controller, the Adaptec 4000A, stores the drive specs
somewhere on the first track of the drive. This is done when formatting
the drive, and at bootup time, the controller reads this information
from the drive. If for some reason the geometrical data are not
written to the first track or cannot be read properly, it will have
the effect which you have seen.

So now you have to find out whether the data was not written at all
or maybe there is a read error on the first track where these special
data reside (or, maybe, the drive has problems finding the first track
at bootup time). Did you get any error messages from your formatting
software?

If you happen to have some low-level tools which can send SCSI/ACSI
commands, try to send a MODE SELECT command to the drive containing
the drive geometry data. Look out for error messages from the drive.
If you're not sure what I'm talking about here, try to get hold of
the Adaptec 4000A OEM manual to find out more.

From: hallvart@oslonett.no
Message-ID: <3m6u5n$9l1@sinsen.oslonett.no>
Source record: 26741

I'm looking for software that enables me to design PCBs (Printed circuit
boards) with my STE. I mean the traces on the boards themselves, not the
schematic circuits.
Is there software like that available in PD or shareware form?
If not, what commercial programs are there, and how much do they cost?
I only know of "Circu it!" by Maxon computer and "Scooter PCB".
As far as I know these programs are pretty complex, but all I need is
make some pretty simple circuits, but I need to have the correct distances
between ICs etc. so using a drawing program won't do- any ideas?

As I said, there are various attempts to get around the limit with addon
hardware, and there may even be something available from Germany (or elsewhere)
but the general answer is that 4 Megs is the limit...

For the averages ST user, (I doubt Tomas is average) there is
virtually no way to extend the memory easily or inexpensively, if at all.

I suspect the Conner 80 Mb drive, if you have one. Mine had a similar problem... It was a contact problem inside the hard disk, and more specifically in one strange connector (a piece of plastic on which the wires were glued - I don't know the proper English name for that =-(..) Something you can bend and twist and everything. You can try to use some contact spray on it, cleaning the contact areas. But I recommend purchasing a new, BIGGER and FASTER IDE drive, instead. A 3.5" one CAN be fitted inside with an adapter cable and some patience. If you purchase a Seagate 420 Mb model, you have to remember this: this model is fast and cheap (1700 kb/s) - but it has a nasty habit of shutting itself off after a certain period of non-use. With kind help of some people here, I wrote a tiny program that prevents this. I can't upload it anywhere right now, but if anyone uses this drive in their Falcons, experiencing sleepiness problems, I may be able to help.

I wouldn't call it great, but it's at least as good as AHDI and offers some extra features with it. In Falcon, some IDE drives are faster with HDDriver than with AHDI (a special hi-speed mode). I've heard there are some bugs in the version that comes with Outside 3.2 - and the one with 3.3 should be better..

1428. HELP!!! ST in the recording studio

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-09 00:00:00 UTC
From: mcwilliams@wmich.edu
Message-ID: <1995Apr9.003135.30198@wmichgw>
Source record: 26747

Ok, you technical minded ST owners, I was using a 1040st for the longest time in a home studio and have recently purchased a used Mega 2 with 4 megs of memory. I have the following problems/questions:

1) Can putting the monitor between two speakers (they're about 4 1/2 feet apart) harm the monitor? I've noticed a bend develope on the edge of the screen image but am not sure if it's related to the placement of the monitor.

2) The 1040st and 1040STE don't have fans. Can't I disable the fan on the Mega? If not, what's the difference between the machines? Would putting the cpu in a sound proof enclosure harm it in any way?

3) Simply turning the monitor, and especially the computer on, adds line noise to the mix. I've tried using an outlet strip that filters noise but it doesn't seem to do any good. Is there any other way to eliminate this problem?

Thanks,

Brian

1429. MiNT help on Falcon

Newsgroup: comp.sys.atari.st.tech

I have just set up a minix partition for mint (compiled for hardware
scrolling on the Falcon:) and am trying to use tcsh (605).
Could some kind soul out there tell me what I have to do to get tcsh
to read a .tcshrc file?

If you don't feel like explaining it to me I would be very happy to have
your partition file Iisting and mint.cnf etc. files.

It also seems that the install program from the Mint Distribution kit
does not work on my Falcon: wheneve I try to read a *.sys file from a floppy
I get some GEM window telling me : a file with that name already exists or
the file is set to read-only.

any help would be greatly appreciated

This is NOT a message from the operating system!
Sometimes it can happen, that the GEMDOS pool is full. But in this
case you get the message

*** OUT OF INTERNAL MEMORY:
*** USE FOLDR100.PRG TO GET MORE.
*** SYSTEM HALTED ***

And nothing else! If your problem is caused by a virus - wich programs
do you use? Did you compare file-sizes and -dates from your original
disks with the current programs you are using?

Ciao...

Cheapest will be System Solutions in the Uk. Their Translator isn't
bad. Next best is the ICD Link for which you can shop around (look
out for Atari World - it's full of ads <g>).

Avoid the Gasteiner one - the build quality is suspect, not to
mention the apalling software.

1436. Mega 2 woes

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-09 00:00:00 UTC
From: digiacom@panix.com
Message-ID: <3m92ae$khk@panix.com>
Source record: 26755

I recently received a Mega 2 motherboard from a friend who had no use for it, since it doesn't work. He tried to upgrade the total memory to 4 megs. The layout of the motherboard looks like a Mega 4 except its missing the two extra banks of ram chips. He added the necessary sockets and capacitors for this addition. But upon further examination, a trace on the motherboard is broken and is lifting up.

Can I possibly get this Mega 2 working again? or should I just use the ICs for spare parts?

Any detailed help or suggestions would be appreciated...Thanks

You need to give more information than that!

1. What are you doing, when you get the message? What program are you
using? -It could be true, that you really ARE out of memory. Even though
your computer has 4 megs, some BIG programs can run out of it.

2. Have you checked your disks for viruses with a virus-killer?

3. Have you checked the memory? -It _could_ be a fault within your
RAM-chips...

4.... etc. etc.

-With regards...
Hrafnkell Freyr Hlodversson

If you're not using MintOS for logging in, it is a good idea to set the
HOME variable in your mint.cnf file. Tcsh (the version I use anyway) will
look for both cshrc.csh and tcshrc.csh in that directory.

Actually, the Marpet board seems very easy to install on a MegaST4
(this is the model we are talking about, right?). It just plugs into the
proprietory megabus slot. You need to have TOS 2.06 though.

It was also relatively inexpensive (around $90) and takes regular
SIMMs. I am very interested in this product but I have heard
conflicting stories about how well it works. Some people have
reported very nice things about it and others have reported
experiencing problems.

But for owners of regular STs (520, 1040, STe etc.) there doesn't seem
to be any good way of expanding memory beyond 4 megs.

PCB-layout is a quite good program... atleast the version I have 1.22.

It does what you want, let you "draw" a PCB-layout. The strong part of
PCB-layout is the output... it can print on Lasers, nedle-printers and
plotters, and it can export the layout to a .IMG file. Also it can
generate data for a NC-drill... very, very nice!

The minus side of PCB-layout is that it has fixed sizes of the holes and
pads, and ONLY 3 different pads... also it only have 3 FIXED linewidth,
NOT good. AND it ONLY have a resoloution of 1/20" for the grid (minimum
distance between pads) a IC has 1/10" between the pins... This is not so
big disadvantage, for many things 1/20" is enough... BUT for some not...
you can ONLY have one line BETWEEN two pins of a IC.

If its a Mega, it has no internal disk, then you can "MAYBE" disable the
fan. The best solution is a soundproof box, however, they usually come
with a fan as well!!! (wery silent, but still a fan)

I have experineced the same, but it does not come from the monitor, it is
from the midi interface of the Atari. Port 1 is not standard and I believe
it has something to do with grounding

I don't know if this helps (maybe), but you should be using the
MiNTOS-package anyway, if you don't do by now. You will be able to
manage real home-directories, in any of which you may put a
.tcshrc-file, which will definitely be read if the appropriate user
loggs in. Also, a specially-named file in /etc is read as a
system-wide pre-definition. I can't remember the name now, but it is
mentioned in the tcsh-man-pages.

I think you have your DESKTOP.INF or NEWDESK.INF too large. Try reducing the size of it. It is the environment memory that is overflow, that's why your opened windows are closed, there was no space left to keep that info in the memory.

A few years ago, there has been quite a lot of discussion on this subject
in this group. I try to summarize the most important results from memory:

Technically, the memory acces is controlled by an interaction of glue and mmu.
The glue chip resolves the full 16 MB (24 bit) address space of the 68000. It
needs to be able to do this in order to access the peripherals of te system.
When the glue chip does not get a reply on an access to a given address within a
very short time (1 or 2 bus cycles (or so)) it issues a timeout and the system
issues a bus error.

The mmu's address space is limited to 4 MB (probably in order to get the chip
cheap and to save address lines and memory access logic on the system board). If
it sees an address above 4 MB, it simply ignores the two highest bits and aliases
the address into its 4 MB space.

So if You manage to add RAM above 4 MB, say, by cloning the well
documented circuitry of the st, You won't be able to notice it because of the mmu.
A solution to extend the st memory above 4 MB has to extend the mmu somehow in
order to avoid the adress aliasing. Due to the timing properties of the st, this
is not easy.

|>
|> >Are we forgetting the XtraRam+8 board from Marpet, that takes a Mega4
|> >(with TOS 2.06) to 8 or 12 megs? Tomas at CodeHead Tech has reported
|> >on GEnie that he is happy with his unit.
|>
|> As I said, there are various attempts to get around the limit with addon
|> hardware, and there may even be something available from Germany (or elsewhere)

A german company named GeSoft sold a board to extend an st up to 12 MB. It
was very expensive --- nowadays an entry level 486 is chaeper.

I hope i succeded to demonstrate the technical effort needed to extend the st
above 4 MB

As we get older and everything around us gets more and more modern
there will always be a time that we are gonna hafta getta whateva we
need to keep ourselves going, if you see what I mean (probably not).
Clearly that is not going to be an Atari!? (I do think it is good to
resist the temptation as long as possible, but really, even a
hyper-upgraded TT nowadays is getting slightly old-fashioned, isn't it?)

From: ai066@FreeNet.Carleton.CA
Message-ID: <D6xG7H.vt@freenet.carleton.ca>
Source record: 26783

I have a supposed High Density Disk drive that I would like to replace a single sided 520 STFM internal drive with, to use in 720 k mode. The drive is labeled as: Sanyo E20N5 1426, and as ERGO MD-21-DS350-B1, S/N1H038406.

A friend of mine tried it in his 1040, and it would read the directory of the disks, but it would not let him access/copy or read any of the files.

The drive may in fact be toast, but I have no real way of knowing. Could the step rate be set incorectly, or possible the HD detect jumpered incorrectly?

Thanks!

No.

>GDOS would also be a requirement as there is again no need to
>re-invent the wheel. I think most Atari owners
>have access to GDOS and some fonts.

Yes, but IMHO the fonts should be supplied with the browser (Speedo/
Truetype & GDOS). Otherwise the screens could become a mess due some
odd kernings and line-widths.

>Let me know what you all think... when I have some time I will start
>developing a strategy for coding. I would like to write something

>hands down for DP speed compared to anything on any platform).

I think you should aim for an independent product (no extras except
GDOS needed). I'm a sort of an Atari "power user", but still not willing
to use any hard-disk space for Mint, or spend hours installing Linux.
Plug&Pray is what is needed. Don't make the product suffer fro too
complicated installation. Good luck!

I have to disagree somewhat - the computer you _need_ is one that
satisfies the requirements of what you have to do. If you're saying
that PCs are getting more modern - think again. The basic layout
and hardware is still one of the worst computer architectures possible.
Sure when the 386 came out they had the means to change it but, unfortunately,
the software standards had already been put in place and they stuck with
the PC-AT type architecture. PCs are still nowhere near using the capabilities
of their high end CPUs - the other thing is that software has been
written so grossly inefficient for a long time now that some PC programs
are actually unbearable to use, even on a 486/66!

Macs are a little further ahead in the game, but the new system software
is a real dog. You can also predict what Win9x will run like if it
ever makes it to market. Unix type OS's are definitely the way to
go - that allows platforms with the latest and greatest technology
to be 'compatible' with standard software and still use all of the
bells and whistles on the new technology.

The real advantage the high end Ataris (like 48Mhz TT's with TT-RAM) have
is that much of the software is designed to be bearable (and quite useable)
on an 8Mhz ST - needless to say software flies on a TT. Have you seen
Calamus on a TT? It was way ahead of its time. The major disadvantage
is a lack of 'compatible' software - this is somewhat moot when things
like AtariWorks and Papyrus Gold come out and support RTF. You don't
need to run WP or WORD (besides you need a REALLY high end PC to run

these without tossing it out the window!)

I would eventally want a Unix-based workstation with the future things I plan to dabble in but for now I have no need for a PC - my TT does everything I need it to do. Besides now on my TT I can run Atari,Mac, and Unix (including X windows) software. Needless to say there is a lot of stuff out there but most people only regularly use a few key packages.

Sam

Hi there!
I have a Mega 4 and an ICD FA-ST hard disk drive box, which I use for music applications, and frankly, the combined noise their fans is getting on my nerves. The question is: how unsafe is it to disconnect the fans? The more annoying one is the one on the hard drive, but it seems to me that nothing there gets warm at all; I am somewhat less sure about the computer itself. Has anyone tried this? Thanks un advance for any tips.

Gustavo

IMO, the distance is sufficient to not influence the monitor.

> 2) The 1040st and 1040STE don't have fans. Can't I disable the fan

HMM, Mega 2 with 4 megs? Are there any other modifications installed in that
machine?

You can easily reduce the noise of the fan, if you cut out the plastic cover
in front of it. Use a sharp knife.

> 3) Simply turning the monitor, and especially the computer on, adds
>line noise to the mix. I've tried using an outlet strip that filters noise

Try to move 'em as far apart as possible. Play around with the way you've
plugged the different machines to the mains.

Is the shielding of your cables done correctly? Perhaps wrap some metal-foil
around the sensitive cables.

But having said that, I am in favour of compulsory ownership of MagiC :-)
Since I first tried it many months ago, I have NEVER booted without it
(except for colour games). It revolutionizes the way you work, and cures
all the bugs and speed deficiencies present in (almost?) every TOS.

Just My Opinion!

If it turns out that your DESKTOP.INF or NEWDESK.INF file is too large for
the buffer, the buffer size can be increased. You need a program called
SHBUF (Shell Buffer), and also GEMRAM or ROMSPEED. If you use WinX you
will already have one of these latter 2 installed.

>incompatible with all other formats AFAIK

But as long as a harddisk has been formatted under DOS or on the Atari with SCSITOOL and a special option and if each partition is less than 32 MB the drive can be acccessed under DOS as well as under TOS. Most TOS harddisk drivers recognize DOS compatible formats. Partitions greater than 32 MB are not possible because TOS and DOS are not compatible any more when using big partitions.

I have the following Atari Computer for Sale:

Hardware:

Atari Mega STE 4
4 MB RAM
50 MB internal hard drive
Magnavox ICM135 14" Stereo Color Monitor
External DS(720K) Floppy Drive
Supra 2400 Baud external Modem
Beetle Mouse
Atari standard Mouse
Wico Joystick
3 2600 Joysticks

Software:

Pagestream
WordWriter
Word Flair II with FSM GDOS
Diamond Back II
various other utilities (Warp 9, look it, etc...)
plus MANY GAMES (Dungeon Master, Empire, Uninvited, etc...)

****
Everything is in MINT condition, and I have the original
manuals for the software/hardware, as well as the orginial
boxes for the hardware.

Shipping can be arranged. I would prefer US sales, payment
must be in US funds.

I am asking $800 or best offer for the whole package. Please
send me EMAIL at dogman@svpal.org if interested of if you have
an offer.

: > Has anyone any experiences with the Overscan Hardware mod for the
: > Atari ST?

Yes - a bad one... I simply could not get it to work!

: Yes I do since a lot of time when the 1st version appeared in the german
: STMagazin (around 1989, if I remember). The mounting requires quite a lot of
: soldering experience, but only one logic gate.

There is really not a lot of soldering needed... IIRC you just send the
Composite video signal to the Display Enable line on the Video Shifter chip...

The one gate you mention (an AND gate) is only for ST's which do not yet
have Composite Video capability, which mist then be made my ANDing
together Hsync and Vsync...

: work. Unfortunately, you cannot switch from one to the other mode without
: rebooting, so the Auto-Overscan harware is well worth the price.

If you bootup with the overscan switch ON, then you can change at will
between overscan and non-overscan. Problems occur if you bootup with
overscan OFF, as there is not enough memory allocated for the bigger screen...

It was none other than Leslie Hartmier who did write on 05 Apr 95 that ....
LH> What are the benefits of HDDriver? I got the program with my
LH> Outside (the virtual memory program), and to be quite honest,
LH> besides the fact that it supplies XHDI, what else about it is so
LH> great?

Easy to set up ,works better than any of the other drivers on the Falcon for sure. IT certainly copes better with the SCSI lockout problems with BlowUP res in hi colour (to the extent that it doesn't happen on my system anymore).It is cheaper than ICDpro (not of course a really major issue for most but worth a mention)

Most important however .. It is being supported !!! New versions are to support MagiC3's background DMA for example.

OK, I lied, but if this is the only way I can get anyone to answer my posts, then so be it ! :-)

Either there is an 'Ignore Kevan' campaign going on or *nobody* in this group can answer the following questions... I have posted these about three times so far and had _not one_ reply !!

PLEASE - if you know, can you tell me.....

1) If it is possible to connect a monitor with Analog / TTL / Video in inputs to my ST ? If so, can you tell me the pinouts I need for the cable ?

2) What are the rough percentages of hard drives out there that have permanently enabled parity ? I may buy one 'blind' so to speak from an auction and want to know what chance I have of getting one that won't work due to parity probs.

3) Why won't Calamus work on an STe ? Is there a patch available ?

4) I've forgotten what number 4 was now, it's been so long since anyone answered any of my posts :-(.....

5) Will you answer this...PLEASE ?

Many thanks to all who even just *read* this !

Cheers,

Kev.

Well, I have Platon from VHF computer... they have it in english and german...
(not sure about what else) for simple stuff, you want the cheaper starter program.
(2.01 I believe, I have that.. when I ordered they sent the old and new since I
paid for the newer bigger one..)

2.01 will let you do what you want... nothing nice like schematic capture...

email me at bkamen@genie.geis.com or
mwegner@dial.illinois.net (work address)
and I can get you the Inet address of VHF ...

(i believe it's info@vhf.stgt.org... but I'm not sure and a message from you would
remind me to check it for sure...)

talk to ya later!

>
>
> Ok, you technical minded ST owners, I was using a 1040st for the
>longest time in a home studio and have recently purchased a used Mega 2 with
>4 megs of memory. I have the following problems/questions:

You are noticing the magnetic pull from your speakers, they are too close.
You can magnetize the computer monitor if your speakers aren't shielded
(which is a factory process as far as I know). If you have magnetized your
monitor already, I have demagnetized mine in the past with a cassette tape head
demagnetizer (available at Radio Shack). Turn on the demagger (with all tapes,
disks and other magnetic media miles away. Move the device in circles close to
the monitor and make larger cirles as you move away from the monitor. The purpose being
to randomize the magnetic field. If you are uncomfortable with this, a repair
shop should be able to help. Lesson: Keep speakers (and other magnets) away from computer
monitors unless they are magnetically shielded.

>
> 1) Can putting the monitor between two speakers (they're about 4 1/2

>
> 2) The 1040st and 1040STE don't have fans. Can't I disable the fan
>on the Mega? If not, what's the difference between the machines? Would
>putting the cpu in a sound proof enclosure harm it in any way?
>
> 3) Simply turning the monitor, and especially the computer on, adds
>line noise to the mix. I've tried using an outlet strip that filters noise
>but it doesn't seem to do any good. Is there any other way to eliminate this
>problem?

Some noise can come into your system from the RF that any T.V., monitor or computer
transmits. Proximity is the culprit. I have also found that lifting the grounds on
on Atari monitors can remove some noise from the AC, though this may not be proper
installation electrically.

Hope this helps,

Regards,

Michael McInnis

1496. MacMint - want to build new version.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-16 00:00:00 UTC
From: ssartori@cnj.digex.net
Message-ID: <ssartori-1604951734320001@summit.digex.net>
Source record: 26815
Cross-posted to: comp.sys.mac.apps,comp.sys.mac.programmer.help,comp.sys.atari.st.tech

Now that MacLinux seems to be dead in the water, I've been fooling around with MacMint. I've got version 0.95 up and running no problem on my C610 but I'd like to try and build version 1.08. The helpful install script(s) say that in addition to a couple of files in the MacMint distribution I need a couple of items from (and I quote) "the MPW environment". I don't own MPW but comments in the install script point me to the following locations:

dts/mac/tools/mpw/3.2.interfaces/cincludes-mpw3-2.hqx
dts/mac/tools/mpw/3.2.libraries/libraries.hqx

My problem is that, since Apple has reorganized their server(s) I can't find these files. Anybody know where to look?? Anyone successfully built v1.08??

Any help much appreciated....

steve

@set me=ignore kevan:on
Or @ignore kevan=on
: *PLEASE* - if you know, can you tell me.....

: 1) If it is possible to connect a monitor with Analog / TTL / Video in
: inputs to my ST ? If so, can you tell me the pinouts I need for the
: cable ?

All instincts(and educated readings on this topic) indicate that this is
possible through the use of Analog part and the Video-in. Video in is
composite video, which means that as long as you had an RCA-style jack
coming off your ST(rf models or STE), you can do it direct. ST's use
analog RGB, so theoretically, it's possibly, but I have no idea about
the pinouts. TTL is digital signal...and not compatible w/ the ST.

: 2) What are the rough percentages of hard drives out there that have
: permanently enabled parity ? I may buy one 'blind' so to speak from an
: auction and want to know what chance I have of getting one that won't
: work due to parity probs.

Ack... uhm...yeah. Do you have a hard drive already? Uhm...ergh. Hard
drives nowadays are really inexpensive(at least in the States). Buy one
new and avoid the fuss. :)

: 3) Why won't Calamus work on an STe ? Is there a patch available ?

No idea. what version are you using?

: 4) I've forgotten what number 4 was now, it's been so long since anyone
: answered any of my posts :-(.....

Can't help you on this one.

: 5) Will you answer this...PLEASE ?

Okay. This question has been answered. "YES."

Uhm... so yeah, I don't know how things are in the UK, but you might want
to consider getting a new computer... like a 040-based mac or 486-based PC...

but if you don't have the cash, I understand.
Simply hearing you ask these questions means that you're fighting the
realm of incompatibilities. Perhaps the ST is still a viable excuse for
a computer there... but in the States... it's really almost all Mac and
PC... except for the SGI's and Sparcs. :)

PC Linux is ahead in development compared to the Amiga, and the Atari.
But Amiga and Atari Linux ports are at Beta stage. I heard that the Mac
Linux isn't going very far.

Its mainly newer drives which have this problem. Anything over about 3 years old is almost certainly guarenteed to have a parity jumper. OTOH buying old drives - untested is very risky.

All IMHO and AFAIK of course ;-)

:-)

Roland.

It would be nice to get a complete set of net utils under GEM. I once tried
to organise a project to try and address the problem but nothing came of it
in the end.

Being a MiNT freak I am probably biased, but IMHO any stuff like this (GEM
based net utilities) should support MiNT-net (as an optional extra if
necessary), or at least co-exist with it so that people can run the new GEM
based programs and the text based programs together over the same link.

Well, that's pretty obvious. And I did try putting my ST disc in the PC,
but the PC said it needed formatting.
It didn't occur to me to try a PC disc on the ST.

Provided you don't use a 1.44Mb disc it works!

Thanks a lot. Now all I have to figure out is how to make the midi
file play on the PC somewhere close to how it plays on my ST/Clavinova.
There must be another newsgroup for that one.

I use STalker 3.04 and STeno 2.11. Paste to STeno works fine for me,
using a ram disk as the Clipboard Drive. I forget what happened when I
was using the Atari Clipboard method; I may not have tested the paste
facility after getting the upgrade patches for STalker & STeno.

Format the disk on the 486PC for better compatibility (for the MSDog, ST can read most disk). Remember to format to 720K.

The SyQuest should work fine. If you have a TOS version older than 1.04,
you'll have to use small partitions (16 megs or less). Other than that, no
problems.

>Does anybody know the keyboard connection protocol for the ST?
>(i.e. Which pins do what... how data is transmitted etc.. With this info
>I should be able to connect keyboards from other machines, since I am now
>modularizing my ST!)

It's a simple two way serial link to the keyboard 5v, 0v, Rx Data,Tx Data
the data rate is 7812.5 Baud - the ST's interface chip is a AY 3 6850 ACIA
here's some data I posted to Cix when I fitted a Mega STe Keyboard to my
ageing Atari 1040STF computer.

Keyboard Connector
on the STFM Keyboard Components Signal Carried

Pin 1 (Pin 10 74LS244) (yellow wire) Ground
Pin 4 (Pin 20 74LS244) 5 Volt Supply
Pin 5 (Pin 12 on KBD CPU) serial line
Pin 6 (Pin 11 on KBD CPU) serial line

The Mega's keyboard socket is a FCC68 Modular connector type 6C6P
and the mating plug costs 45p Maplin code JW41U
Looking at the socket from the back of the keyboard

Top
Pins 1 2 3 4 5 6

Bottom

Pin 1 5 Volts
Pin 2 5 Volts
Pin 3 Serial Data Line (Pin 11 KBD CPU)
Pin 4 Serial Data Line (Pin 12 KBD CPU)
Pin 5 Ground
Pin 6 Ground

To sum up then

STFM Mega Keyboard

Pin 1 Pin 6
Pin 4 Pin 1
Pin 5 Pin 4
Pin 6 Pin 3

Regards
Bob

Using something like FCOPY Pro you can format MSDOS readable disks. This is commercial. I don't know whether the Shareware version, FCopy III, can do the same. I thought versions of TOS after 1.2 made PC compatable disks proving you stick to a standard 9 sector 80 tracks?

Also you might try to get hold of a DOS PD utility called ST2DOS which can alter a few bytes on a double density ST floppy to make it readable on the PC and the ST. Not guaranteed to work with all disks but I've found it very useful at times to make some older PD library disks of pics readable on my PC. An Archie search should find a copy easily.

> Any other ideas on how to transfer the data across?

Get hold of a PD utility called ghostlink. It contains a prog for the ST and one for DOS. This will let the ST control all the drives on the PC (floppy, hard and CD) using a null modem cable to connect the serial ports. Very useful for transferring large files in either direction. The PCs drives get added to the fileselector and so you can save direct from an ST prog to the PCs drives, or load stuff from the PC into an ST prog. It cannot do the same for the PC, it does not give the PC access to the STs drives.
If an Archie search fails you can find it on FolkeSTone QBBS (01303 249306 - 24hr, no ratios) as GHOSTLNK.ZIP

I've used this very successfully so can vouch that it works. The PCs drives are set up as icons on the Atari desktop and are controlled from the ST as though they belonged to it. A very neat utility IMHO.

I agree that this is a good idea. It's not like MiNTNet is impossible to
set up. Atari have had lots of standards, but nobody sticks to them (ie
GDOS, GEM Clipboard etc.) Then you end up with heaps of programmes each
having it's own networking system, each one having to be configured
seperately, probably having incompatibilities when running together.
Programmers need to stick to a standard, an the standard _is_ MiNTNet.

Please explain to me how you have tried to get the Paste to STeno to work.

In order for the Paste to STeno to work, both STeno and STalker need to look in the same place for the data that is being sent. So, if STeno is looking at drive D: for the data, STalker needs to put it there. If STeno is set to look at the Atari Clipboard, then STalker also needs to be set there. Both programs need to be going to the same place. The same it true of EditPlus (or EdHak). STalker needs to know where EditPlus is looking for the data. And STalker also needs to know to tell EditPlus to look for the data.

Jeffrey (STeno & STalker Developer)

Yes. The SCSI standard says cables should be less than 6 metres.

BK> Mine is very short (2 feet?). I was wanting to stick the HD under
BK> my desk but the cable isn't any where near long enough.

But that is not the whole story as many host adapters are not built to SCSI spec. and many cables to not conform to the spec either.

"Under the desk" sounds like less than 6 feet, though, so I guess you will be alright.

If the disc seems temperamental try it both with and without the terminator resistors.

No probs.

If you are running fast drives you should have TOS 1.04 or above (or run
FATSPEED as an AUTO) as earlier TOS were very slow at FAT handling.

HELP !!!!

(1) I am running Geneva on the Falcon. I have NVDI 2.5 installed with Geneva and Neodesk4.

When I run gnva_tos.app (A program like MultiTos's miniwin to run TOS programs in a window) I always get 2 bombs.

I have tried every configuration I can think of even to the extent of disabling NVDI but with no luck....

I tried the software on my STE and it works fine...

Any help appreciated .

(2) Is it true that Geneva will soon be getting MiNT support ?

(3) Is Dan Wilga contactable on the net ?

(5) What happened to number 4 ?

(6) When is MagiC due out on the Falcon ?

(7) Is MagiC MiNT compatible ?

(4) Oh.... There it is.

Thanks in advance,

Steve Found.

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
--------------------------------
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
```

to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

Basically, those control codes don't exist on the Falcon.

There is an auto program that fixes it, called DB_BCON.PRG. This also fixes
the word-wrap bug and the cursor save/restore bug.

DB-BCON.PRG is for Falcons with TOS 4.1 *only* (it crashes on anything else)

Is there a similar fix for Falcons with TOS 4.4 ? (On which the word-wrap
bug appears to have been fixed)

1527. CX77 Touch Tablet on ST?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-18 00:00:00 UTC
From: Ken.Weber@Microserve.com
Message-ID: <95041846134@microserve.com>
Source record: 26696

Is it possible to modify the old 8-bit CX-77 Touch Tablet to work with the ST? I'm not sure what it's output is. I've tried DC's Joystick mouse and that didn't work. I've seen modifications for old 8-bit trak balls and was wondering if there was a modification for the tablet.

1528. STFM 4Mb. memory upgrade HELP!.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-18 00:00:00 UTC
From: nickf@fleet.cadence.com
Message-ID: <NICKF.95Apr18172409@fleet.cadence.com>
Source record: 26697

As there are undoubtedly many of you out there who have upgraded your STFMs to 4Mb. I would be really grateful of some advice.

Some time ago I upgraded my early 520STFM (TOS 1.02?) to 2.5Mb using one of Marpet Developments upgrades. Unfortunately my machine has a surface mounted CO101601 MMU and so it was necessary to connect the expansion board to the MMU by soldering directly onto the ST's motherboard. This upgrade was a success and did not cause any problems.

Recently I decided to replace the 2Mb. expansion card with a 4Mb. card. I decided to get another Marpet Developments card as both use the same connectors.

The installation manual accompanying the upgrade mentions that for the 4Mb. upgrade it is necessary to switch off all internal memory. It says that for my ST model to do this you should cut R61 and R60 nearest the MMU chip and connect them to +5V.

I have tried this, however, when I do so the machine fails to boot (with either the 2Mb. or 4Mb. expansion boards). I rechecked all connections and solder joints but could find no problem. I reconnected R61 and R62 to the MMU and tried the 2Mb. board again. It worked fine.

I am at a complete loss to explain this. Have I missed something? There appears to be nothing wrong with my wiring (because it works OK with the internal memory switched on), however the machine fails to boot when I disconnect it as instructed in the manual.

Any help or suggestions on this matter would be really appreciated. I'd hate to have to give up on my ST after all these years because I was unable to upgrade it to 4Mbs.

Nick.

Can't really help you there, except to suggest that perhaps the program
is corrupted in some way. It works fine on my Mega, even if screen writes
are a little slow.
: (2) Is it true that Geneva will soon be getting MiNT support ?
Yes. No memory protection, though that isn't really a problem.
: (3) Is Dan Wilga contactable on the net ?
Try gribnif@genie.geis.com, if my memory serves.

I have heard of folks using 3 foot cables (ICD, I think). There is a definite
length limit for DMA cables, but a lot of them are shorter than they need to
be. I think both Atari and Supra used very short cables.

1531. How to hack PC mouse to ST?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-18 00:00:00 UTC
From: ronald@spartan.ac.BrockU.CA
Message-ID: <1995Apr18.231321.22375@spartan.ac.BrockU.CA>
Source record: 26700

Several years ago I came across a text file describing how to change the wiring on a clone-mouse to work with the ST. Does anyone have this information? With the closure of Atari Canada a couple of years ago and the closure of most ST dealers as well, it has been kind of difficult to get any ST stuff.
Thanks
Ron

1532. OASIS available

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-18 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <798165982snz@yeadontt.demon.co.uk>
Source record: 26701

This is an announcement for a new package for the Atari range of
computers called OASIS.

As of Tuesday 18/4/95 I have upload OASIS100.ZIP to the following sites

DEMON ftp.demon.co.uk

Posted to the incoming folder in the Atari section of
their FTP site

HENSA micros.hensa.ac.uk

Posted in the incoming/atari-tos folder in the incoming
area of their FTP site

Chameloen BBS (UK 01454-831095)

Uploaded to the Comms area of the bulletin board

OASIS is a GEM based off-line reader replacing the complete set of
AtariNos off-line utilities, the only items retained are the NOS on-line
software and the DEMON.TOS batch file launcher.

There will is no shareware policy on version 1.xx of OASIS, just E-Mail
me if you use it. Comments, likes/dislikes, wish lists for further features
and Bug reports, if any :-), would all be appreciated

: >Yesterday I upgraded from STalker 3.02 to 3.03. (Thanks, Gribnif!!)
: >(I'm using STeno version 2.00 along with it.)

: There's a newer patch that will take STalker to v3.04...

Hmmm. Will that allow the "Paste to STeno" utility to work correctly?
(Is there a bug in STalker 3.03 in that regard?)

: >Now, however, the "Paste to STeno" utility doesn't work. Is this
: >"normal," or do I need to do something else besides copy the upgraded
: >files (STALKER.PRG and STALKER.RSC) to my D:\COMM\STALKER directory?

: I've been using STalker v3.02 for quite some time, and using EdHak (now
: EditPlus...) instead of STeno. STalker v3.04 breaks the connection to
: EditPlus same as you noted above. I sent e-mail to Dan Wilga about it,
: who replied that I must not have to SETTINGS>PREFERENCES>Atari Clipboard
: setting properly configured, but no amount of tinkering fixed it...

I checked and rechecked and rechecked everything when STalker 3.03 wouldn't
paste to STeno, but I had changed nothing from the way things worked --
and worked fine -- with STalker 3.02.

: In order for the Paste to STeno to work, both STeno and STalker need to look
: in the same place for the data that is being sent. So, if STeno is looking
: at drive D: for the data, STalker needs to put it there. If STeno is set to
: look at the Atari Clipboard, then STalker also needs to be set there. Both
: programs need to be going to the same place. The same it true of EditPlus
: (or EdHak). STalker needs to know where EditPlus is looking for the data.
: And STalker also needs to know to tell EditPlus to look for the data.

: Jeffrey (STeno & STalker Developer)

As was the earlier setup with STalker 3.02, STalker 3.03 and STeno 2.00
are both set to use drive M as the clipboard.

The "Copy to Clipboard" function still works (M:\SCRAP.TXT contains the
blocked text), but the "Paste to STeno" function no longer works -- this
is what's got me baffled.

Nope.. Unless i'm wrong neither analog or TTl is supported, but since
i'm not quite sure what signal a VGA is, then i may be wrong, as you can
connect a VGA with no problems.

>2) What are the rough percentages of hard drives out there that have

Almost none.. If you need a harddrive for your ST(e) buy one where the
parity can be disabled.

>

If you're using ScsiTools there is an option to switch this annoying sleep
off. It is meant to be a Green funktion, but i guess you're driver can't
handle it. It could ofcouse be a bug in your drive, but thats just a guess.

You do not have to re-format. You can specify which partitions
you want Spectre to use and it will write the Mac style FATs and
directories. These partitions will not be seen by GEM once they are set
up for Spectre. It's very easy.

On 18 Apr 95 Nick wrote::

NF> The installation manual accompanying the upgrade mentions that for
NF> the 4Mb. upgrade it is necessary to switch off all internal memory.

Yes, the ST has two memory banks and for a 4Mb upgrade they are each 2Mb.
Any other store becomes defunct.

NF> It says that for my ST model to do this you should cut R61 and R60
NF> nearest the MMU chip and connect them to +5V.

Ermm.. OK, not sure about this.

NF> I have tried this, however, when I do so the machine fails to boot
NF> (with either the 2Mb. or 4Mb. expansion boards).

This sounds suspiciously as though the ST cannot access RAM bank 0. There
MUST ALWAYS be something in bank 0 - it used to be the 512Kb of your 2.5Mb
configuration.

NF> I rechecked all
NF> connections and solder joints but could find no problem. I
NF> reconnected R61 and R62 to the MMU and tried the 2Mb. board again. It
NF> worked fine.

I have never fitted a Marpet board but would guess that there is some
confusion here over board Rev letters, component numbering and the
instructions for the upgrade.

Can you discover what happened to the old RAS0, CAS0 signals which used to
address the 512Kb. It sounds as though these have gone missing.

NF> I am at a complete loss to explain this. Have I missed something?
NF> There appears to be nothing wrong with my wiring (because it works
NF> OK with the internal memory switched on), however the machine fails
NF> to boot when I disconnect it as instructed in the manual.

Fail to boot = nothing found in bank 0.

NF> Any help or suggestions on this matter would be really
NF> appreciated. I'd hate to have to give up on my ST after all these
NF> years because I was unable to upgrade it to 4Mbs.

No NO, don't give up. You can always send it to Paul Rossiter or other
repair shop to get things sorted if the worst comes to the worst.

BTW - I would be interested in your old Marpet board if you have no other
plans for it.

If you mean the DMA cable, then yes, there is a limit at 80cm. Above this
anything 'bad' can happen. (Mostly timeouts).

If it's a Scsi cable you mean, then normally 2 meters is the maximum length.

It all depence on the buffer in your hardware equipment.

> Mine is very short (2 feet?). I was wanting to stick the HD under my
> desk but the cable isn't any where near long enough.
> I sort of get tired of hearing the fan hummmmmm.

I don't know, which port you are using (SCSI or ACSI)... so it's very
difficult to say, what the problem may be.... If you are using the
ACSI-Port of the Atari, even short cable-distances may cause problems :-(
You should use not self-made cables....

If you're using the SCSI port of TT or a SCSI-Adaptor, longer distances
are possible. Do you have terminated the SCSI-Harddisk quite right? Wrong
terminated HD's won't work quit right......

1) Normally you can connect such a monitor to the ST. Do you
want to have B/W-mode or color-mode? (different pin's). pse
write again, so I can help you....

2) I don't know the percentage of any model of HD's, but EVERY
good HD's should have a jumper to dis/enable parity-bit!

3) Calamus (which version?) should work on ALL St(e)'s /TT's!
Maybe you have to low MB's in your STE! Calamus SL should have
at least 4 MB......

4) I can't answer to #4 but I have done

5) and answered you!

AG> As long as over 901f the Atari community wouldn't dare to face the
AG> challenge of getting MiNTnet to work, it cannot be a standard.

Agreed, I've tried to set up MiNT 1.12h3 on my Falcon, but it crashes out
all over the place, even with no CPX'x, no ACC's, just running MiNT itself.

I used to have a working system, but lost it in a disk crash. I'd like to
restart again, and th solve the problems, but I've been working on this for
months with no success.

Needless to say it a propper installation kit was made up including
everything needed, than life would be made a lot easier, but I doubt that
this will ever happen.

That depends on the host adapter used, Atari state 18" and ICD uses 36",
the Atari interface was never ever designed for a long cable at all...

I do sugest you change your desk and stick with the 24" cable....

The CPU-to-HD cable should not be too long. Once I had a weird problem
of intermittent CPU crashing with the video going crazy (stripes
on the screen, awful noise). The reason was a cable too long. A shorter
cable (30 cm vs. 50) solved the problem.

Remember, most of the signals are unbuffered on the ST.
This sloppy engineering is one of the reason why we can't have
normal-length cables (seesh).

I beg to differ on "MiNTnet" being a standard to be followed.

Standard is TOS/GEM. MultiTOS can also be considered as a standard; it is
also simple to setup: copy mint.prg, mint.cnf and there you go!

NO need to add a minix partition (although I love the speed and features,
I still do not think that I must set aside a partition jsut so I can run
some software.

No.. there is a choice: implementing whatever protocols are necessary
to establish a connection with the many "direct" internet service providers.

I do not have the documentation/specs. on the protocol-- if I did, I would
certainly try to write myself some hack so that I can at least use lynx
until I port and graphical browser (say, Chimera.)

In essence the reason I have my Atari TT is because I can run MultTOS.
If I wanted a unix setup, I would attach my Linux drive and boot up under
Linux-- it works for me, still a few quirks but it is better than some
poor attempt at imitating UNIX under TOS/MiNT.

What I also find disturbing is that some of the files (ls, more, etc.)
vary widely between the various archives.. and they don't all work
uniformly: some work under GEMDOS partions only and others under Minix.

No thanks, I'm sticking to my MultiTOS setup (slow as it is)-- I don't
have to worry about in compatible programs or unstable system. I simply
reboot w/o MultiTOS and work on Calamus.

I like my setup and until I get Linux running completely on my spare
HD and learn the various intricasies of UNIX (and get another computer)
I will continue to use MutliTOS/TOS until this machine either dies or
no longer _SERVES_ my needs.

Sure, I want a faster system but I can't justify spending money on
another system and getting all the development tools for it.

.

MB> length limit for DMA cables, but a lot of them are shorter than they
MB> need to
MB> be. I think both Atari and Supra used very short cables.

Yes, let's get this clear - the SCSI cable can be quite long. Standard says
up to 6 metres.

The DMA cable is something else! Drivers at the ST end mean that anything
over 18 inches is playing with fire.

Michael Ritzert (mjr@geob7.geo.uni-bonn.de) wrote:

MR>Technically, the memory acces is controlled by an interaction of glue and mmu.
MR>The glue chip resolves the full 16 MB (24 bit) address space of the 68000. It
MR>needs to be able to do this in order to access the peripherals of te system.
MR>When the glue chip does not get a reply on an access to a given address within a
MR>very short time (1 or 2 bus cycles (or so)) it issues a timeout and the system
MR>issues a bus error.

The timeout is a lot longer, I think somewhere around 64 cycles or more -
otherwise it would be impossible to add slow I/O devices to the system.

MR>The mmu's address space is limited to 4 MB (probably in order to get the chip
MR>cheap and to save address lines and memory access logic on the system board). If
MR>it sees an address above 4 MB, it simply ignores the two highest bits and aliases
MR>the address into its 4 MB space.

Only if you change the adress decode logic so that the MMU is addressed above
4MB. And if you have a MMU/GLUE chipset made by IMP, it will not wrap around
into the lowest 4MB, but simply ignore the request!

MR>So if You manage to add RAM above 4 MB, say, by cloning the well
MR>documented circuitry of the st, You won't be able to notice it because of the mmu.
MR>A solution to extend the st memory above 4 MB has to extend the mmu somehow in
MR>order to avoid the adress aliasing. Due to the timing properties of the st, this
MR>is not easy.

It can be done - Martin_Wevelsiep@ac3.maus.de designed such an expansion some
time ago. It could do up to 14MB real ST-Ram (with video and DMA
capabilities) in a normal Mega ST. The Mega version is out of production, the
MSTE version (only 10 MB max, due to the VME address space) is still
available.

MR>|> As I said, there are various attempts to get around the limit with addon
MR>|> hardware, and there may even be something available from Germany (or elsewhere)

The Marpet Board (and the Multiboard from H&N in Germany) add alternate ram,
i.e. you can't do video or DMA accesses in the memory above 4MB. That makes
the circuit a good lot easier, since you do not have to use the Atari MMU at
all.

1557. Open File Handles on TOS 4.04

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-19 00:00:00 UTC
From: leslieh@warpcon.ersys.edmonton.ab.ca
Message-ID: <FDTBDFUQUp@warpcon.ersys.edmonton.ab.ca>
Source record: 26725

A friend of mine needs some help with a problem that he has been having involving open file handles. Please direct any help (and any help is VERY gratefully accepted) to this address (or perhaps to this newsgroup, so it can benefit everyone). Thank you in advance.

Can anyone answer this problem with the Falcon:

The Falcon (TOS 4.04) is only allowing 19 open file handles, yet the ST, STE, and TT allow about 75. How can this be increased on the Falcon? The Compendium says only that it is "an operating system dependant number of handles".

Dpathconf() only returns the limit. How can one set it?

More handles are urgently required to run a database program on the Falcon which otherwise runs fine, and runs perfect on any other machine.

In DOS one would simply set FILES=60 for example, in config.sys.

I've included a program which opens files until an error occurs for anyone who needs proof.

If anyone wants the program, please e-mail me, and I'll send it to them UUEncoded. (It's small)

Leslie

1559. slattach, how to choose protocol and set tty options?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-19 00:00:00 UTC
From: avg@cwi.nl
Message-ID: <avg.798297428@news.cwi.nl>
Source record: 26727
Cross-posted to: comp.os.linux.networking,comp.sys.atari.st.tech

Hello.

I have recently played a bit with 'slattach' on my Atari/MiNT and Linux
machines for a while, but haven't managed to get a proper connection
between the two machines.

I am using 19200 bps, with a few null modem flags on, such as
'clocal' on the Linux box. The Atari version of 'stty' is
undocumented and has a weird set of options.

Anyway, packets do seem to arrive OK when sent from Linux to
Atari, but not the other way round. The Linux box sometimes
thinks it receives a package without the Atari having sent
one recently.

There are two reasons I can think of:

(1) One is doing CSLIP, the other is doing SLIP; slattach
doesn't seem to offer the user to specify the protocol

(2) The modem settings are not right. Which ones should I
be aiming for?

I did my testing using 'ping'. What daemons need to be installed
for a 'ping' to work? Is that just 'inetd', nothing at all,
or do I need something else?

Any hints what the problem could be? Are there any specific
documents describing direct computer-computer serial IP links
other than the Linux HOWTO which is appallingly uninformative
(the same goes for Fred van Kempen's manual pages... which
are simply agressive to novice users at times... ``Go away!!
You do not have access!'' ... ``Please don't pester Fred van
Kempen with your questions'' etc.)

Is networking really as difficult as the net utilities make it
seem? I find that hard to believe.

>the standard _is_ MiNTNet.

If MiNTnet is a standard then Ataries are not computers. On any other
platform, something will not become a standard before it has been well
documented, implemented and is acceptable for everyday use. As long
as over 90% of the Atari community wouldn't dare to face the challenge
of getting MiNTnet to work, it cannot be a standard.

1561. HP PCL5 and PJC Help

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-19 00:00:00 UTC
From: bjr2@Ra.MsState.Edu
Message-ID: <3n387g$ig8@NNTP.MsState.Edu>
Source record: 26729

Hello,
I'm an extremely green semi hobbiest programer so my knowledge of
coding and ST topics is not very good. What I need is help writing a
very simple printer driver for an EPSON Action Laser 1100 printer.
The printer emulates HP PCL and PJL so I went ahead and ordered
a PCL5 TEchnical reference manual. Now that I've got the manual, and
have begun to learn the printer commands...I find that I can't get the
printer to echo back to my ST (so I don't really have a clue what printer
is really thinking...can't do @PJL INFO or INQUIRE commands).
My guess is that I need some sort of memory resident program on
my ST that monitors the prn: port for incoming characters all the time
and spits them out on the screen as they arrive. Is this even possible? I
seem to recall reading once that some of the parallel port pins are not
not connected on the ST.
I'm generating code and compiling it with a very old Mark Williams
C kit. That's about all I know.
If you can help get me on track...please do.

Thanks
Brian

From: hallvart@oslonett.no
Message-ID: <3n1stl$gqq@hasle.oslonett.no>
Source record: 26731

I was just wondering if it's against "the rules" to copy TOS EPROMS.

See, I have a feeling that the dealers who sell the new TOS chips
(TOS 2.06 in this example) don't *buy* the chips from Atari Corp.
but rather just buy blank chips and "burn" (program) them using an
EPROM programmer.
My TOS 2.06 chips didn't come with any official documentation, and there
were no " (c) Atari Corp. " label or anything on them. I also saw one from
a friend, bought from another source, and it looked like that too.
Very "home made" sort of...

So, why am I asking this? I'd like to install TOS 2.06 for some friends,
and it would save them a lot of money just to pay for the blank EPROMS.
Just thought I'd check for legalities first....

^^^^^^^^

As has been mentioned by one or two others here, this is not true.
If you don't believe me, please take a look at the chip. If what you're
saying was true, then there'd be 3 * (24 + 16) = 120 pins just for the
memory busses. You'll have trouble finding all those pins. ;-)

By the way, the cycle mentioned is an instruction cycle which is two
clock cycles long.
(Reference: DSP56000/56001 User's Manual, chapter 2.2)

>one to X memory, one to Y memory, and one to Program memory. The Falcon
>has three memory areas to support these (although they do overlap a bit).

The Falcon DSP has one, single ported, 32k * 24bit SRAM.
The memory is mapped so that the entire area can be used as program
memory, with the X memory overlapping the top 16kword and Y the bottom.

> The confusion may have arisen because each memory block (X, Y, or
>P) can obviously only have one access per cycle.

The confusion is more likely caused by the three internal address busses.
The 56k can make two internal and one external memory accesses during one
instruction cycle.
Internal P memory is 512 word RAM while the internal X and Y memories are
256 word RAM/ROM each.

> Go ahead and spend your $800 (that's a bit much for a USED Falcon

There is only 1 problem with MiNTNet! How do I use it if I don't use MiNT?
Using Multitos (MiNT+ the New AES) Makes my Falcon so slow, so I can't even
dare to think of how slow it will be on a ordinary ST!
Thats Ehy I'm trying to make a WWW-browser which don't need MTOS to run! and
because of that I need to make my own system! Unfourtunally this will Make my
program unable to work together with other Intrernet progs since We can't share
the Com-port, with a seperate standard like MiNT-net this would be possible,
but for MiNTnet I think someone else is already programming a WWW-browser And
you could always see mine as a substitute for those that don't want ot run MinT
just to be able to get out to the net! (or something)

Why does everyone think that MiNT is slow just because Aes 4.0 is? I run
MintNet + MiNT on top of plain gem, and it is _NOT_ slow. A standalone browser
will be very good for those who only like to browse the web so go ahead and
make one :-). Personally I would like to have a MintNet graphical www browser
too since I'm satisfied with MintNet's performance.

Regards, Christer.

No, no! Alfred wanted NetBSD, a *real* Unix, not Linux!!

Try the standard NetBSD servers, sun-lamp.cs.berkeley.edu or ftp.iastate.edu. There is also a server in Scandinavia, but I have misplaced the address.

You have to get the Atari boot floppies and the Amiga binary distribution, since there is no Atari distribution yet. It works fine. Note that the Atari, Amiga, Mac, Sun, and HP versions are all binary compatible!!

NetBSD/Atari doesn't have X yet, and doesn't support any ethernet cards, so there is still work to be done, but Leo Weppelman has done a great job so far.

For more info, try comp.unix.bsd.netbsd.announce and comp.unix.bsd.netbsd.misc.

Hope this helps -- Volker

The best and most compatible way is to format on the PC itself. Just ensure
that you format 720K. I have been doing this for 4+ years now and have not
given me any problems at all. It is MSDog that is picky, ST will read almost
any disk format you throw at it. MSDog will just die if you don't give it the
correct disk standard format.

From: david.williams@deancoll.demon.co.uk
Message-ID: <513026698snz@deancoll.demon.co.uk>
Source record: 26599

BD:-> Has anyone any experiences with the Overscan Hardware mod for the
:-> Atari ST?
Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

Please don't mail me, as mail doesn't work yet at this site!!

Source record: 26602

To all who are trying Oasis.

We are sorry for the troubles that people are experiencing :-(

Unfortunately we have two acts of God and on of BT acting against us,
Phil's TT blew its power supply, A hard disk corruption, My own phoneline has
been useless for a modem for just over two weeks and various last ditch
attempts at getting Oasis out in the last week drained us.

Even when we finally got it out we stupidly left a line of code used in
running the test version so Oasis100 becone Oasis101.

Now its out we find that the ST Medium Res resource has corrupted and
various extremely minor bugs that appeared in beta test, which we put to bed
ages ago are re-appearing.

Enough of this snivelling.

Please give us 2 days and correct these errors and we will upload
Oasis102 which we will make sure is as bug free as we can get it.

Again we apologise to any who have had trouble - if you aren't having
troubles please still upload the Oasis102 version.

Sorry again, Dave

A far better method is to use a small fan in a out side room and feed the Air via a duct, plastic or paper bendable tubing, this could be used to feed many machines...

You should read my letter better next time :) as I said MiNT + the New AES make
my computer slow! and thats why I don't use it! The only reason for me to
multitask is if I am able to run several GEM apllications at the same time, and
for that I need the New AES (V4.0) and it is slow! :(
And I think thats why others like me doesn't like to run Mtos! and thats why
I'm trying to make a standalone version!

BTW I think that a MiNT-Net WWW-browser is under development and thats another
reason for me to not make one!

K > 3) Why won't Calamus work on an STe ? Is there a patch
K > available ?

What seems to be the problem? I ask because I've now been using Calamus (originally 1.09, recently upgraded to SL) for the last two years on my 1040STe with no problems.

Which version of Calamus is it that's giving you the problems?

If 1.09, are you using a monochrome monitor? (I know, obvious, but it has to be asked).

If SL, how much memory do you have on board? (SL is recommended to run with two megabytes of memory on board, with FOUR megabytes highly recommended).

Give me some more details on what's wrong, and maybe I can help. Or better yet, see if you can send E-mail or call DMC Software and talk to either Nathan Potechin or Lou Rocha - they offer excellent support.

From: Alan Parker <se2ap@dmu.ac.uk>
Message-ID: <3n80pl$n9s@macondo.dmu.ac.uk>
Source record: 26610

Hello,

I have coded some texture mapping using the DSP on the Atari Falcon.

I have tried to add a DSP mod player running on Host Command Interupt
and using the SSI to play the mixed samples.

The problem I'm having is that when the DSP interupts it crashes if
my main routine (non interupt driven) writes to HTX, reading from HTX
doesn't seem to cause any trouble, but I have not checked that
the data recieved is not corrupted.

I am saving all the registers in the DSP mod player and putting them
back. I am using DSP flags 2 and 3 if that might be a problem.

If anyone can help I'll be most grateful as I heard there was a
problem with this but I'm at a loss at how to solve it.

Thanks

Alan.

Hi Barry,

Yes it does make a difference. IIRC if you use an ICD host adaptor you
can use a DMA cable longer than the recommended 18 inches, but I don't know
about other host adaptors.

I think this info comes from the ICD extra text files.

Sorry to everyone else - this is a personal reply - see last sentance
of the posting....

David,

The PAK board works just fine - I am still in the process of testing
all my old software with it. The only major thing I have found so far
is that Protext goes belly up. But all the GEM progs I have tried (as
well as most TOS ones) work. MiNT 1.12 works fine although I have yet
to try Minix.

According to the latest Linux FAQ Matin Schaller (Who He?) has
patched Linux 0.9pl5 to work with the PAK - I aim to try sometime in
the next few weeks whan I get time :-)

The one bad point I have about the PAK is the price - from System
Solutions for a PAK with 68030, 68881 + TOS 3.06 is 400 UKpounds! I am
glad I did get it but that price made me think more than Twice.

Thanks for the Overscan info - does the PD version have the ability
to switch back to normal without rebooting? I gather the comercial one
does.

Beric..

1598. REQ: Info on DSP in Falcon

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-21 00:00:00 UTC
From: peter@stack.urc.tue.nl
Message-ID: <3n87dp$2pe@tuegate.tue.nl>
Source record: 26617

Hi. I was thinking of building a synthesizer, based on a Motorola
56004, one or other 68xxx and some external hardware for MIDI and
A/D and D/A conversion. (No, I'm not trying to re-invent the wheel.)
Does anybody know where I could find some technical information on
how the 5600x in the Falcon is implemented and in how far it is
different from a stock 5600x (I have heard such rumours)?

In case you are wondering: a 56004 is a 56000 especially designed
for audio applications. It has two digital stereo inputs and three
digital stereo outputs (compatible with those on your CD player).
It has an 8-bit memory port and no external program RAM. That's
all I know of this chip, so if anybody has some info about the
56004 lying around, that too would be greatly appreciated.

Oh yeah, could you reply by e-mail, please? Thanx!

Share and enjoy,
Peter.

From: bm827@FreeNet.Carleton.CA
Message-ID: <D7E1Dp.L6w@freenet.carleton.ca>
Source record: 26618

To the best of my knowledge, you cannot hook up an ATARI SLM 804 to a serial port.

You can, however, use an ST as a "slave" by hooking up your SLM to the ST's DMA port, and a null modem cable from your ST's serial port to your IBM's serial port. When you use the Diablo 630 driver supplied by Atari, apparently you can "take in" data from the serial port and print in out the DMA port to the laser printer.

I must admit I have never tried this myself but I can remember reading about it several years ago.

Atari Web Pages Latest News
~~~~~ ~~~ ~~~~~ ~~~~~~ ~~~~

Version 1.0
~~~~~~~ ~~~

Date 21/4/95
~~~~ ~~~~~~~

by

Mark Stephen Smith
~~~~ ~~~~~~~ ~~~~~

5th Update
~~~ ~~~~~~

================================================================================

Foreword
~~~~~~~~

Hello and welcome to the news item on the Atari Web pages. This document
will describe the Atari Web pages as provided by Mark Stephen Smith and will
inlcude a list of the latest updates for the month. Each month I hope to update
this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but
they are still at an early stage and developing all the time. As such any
feedback and support you may have for these pages is more than welcome, it is
infact encouraged. The more input I get from its users the better, as then I
will know what is good and bad about these pages and can change them
approproately in the hope of increasing their value to their readers.

Now on with the show.

================================================================================

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in
several projects, and submit work to several Internet and diskmag sources for
inclusion. I have also officially took over the maintenance of the Atari FTP
list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates
will be marked with a U. All new items are also listed below according to the
date they were added.
```

This update is special as it contains the updates from the last two months rather than one month as is usual for the updates. This is a one off however and has happened due to the fact that my Web pages had to close down in March and a new site had to be found before the service was resumed. A new site was successfully found but I felt there were insufficient updates that month because of these events and therefore this update is larger containing both months. Please make a note of the sites new address and update any links or bookmarks to the Atari pages to the new address. Thank you!

The new items this month are:

21/4/95 -- Nova Graphics Board Announcement
21/4/95 -- Sozobon C Announcement
21/4/95 -- FTP site Announcement
20/4/95 -- Speed of Light v3.8 update
18/4/95 -- Atari FTP list updated
18/4/95 -- Doom Review for Jaguar by Robert Jung
18/4/95 -- ECTS News
18/4/95 -- Kasumi Ninja Moves List
18/4/95 -- Coming soon for the Jaguar title list updated.
18/4/95 -- HENSA Atari TOS Newsletter Volume 8. No.7.
12/4/95 -- Speed of Light 3.7b update
12/4/95 -- Fried Bits Eastern Coding Convention 3 Announcement
12/4/95 -- CAIN Newsletter Volume 2. No.3
12/4/95 -- Apex Media Demo for the Falcon
12/4/95 -- HENSA Atari Falcon Newsletter Volume 8. No.3
12/4/95 -- Raiden Tips for Jaguar
12/4/95 -- Lynx FAQ Updated
12/4/95 -- Jaguar FAQ updated
5/4/95 -- Jaguar Game Cheats
5/4/95 -- Theme Park review for Jaguar by Robert Jung
5/4/95 -- AEO Newsletter Volume 4. Issue 4. in text and ZIP format
28/3/95 -- Jaguar Reviews pages format updated by Holger Kipp
27/3/95 -- Falcon Demo FAQ Updated.
27/3/95 -- 50/60 Hz Jaguar games adjusting to resolution list
27/3/95 -- Iron Soldier Jaguar Review by Holger Kipp
27/3/95 -- Syndicate Jaguar Review by Holger Kipp
27/3/95 -- Cannon Fodder Jaguar Review by Holger Kipp
27/3/95 -- Theme Park Jaguar Review by Holger Kipp
24/3/95 -- HENSA Atari TOS Newsletter Volume 8. No.6.
23/3/95 -- Pages re-open at new site, links being updated.
22/3/95 -- Pages closed down.
17/3/95 -- Given the news these pages must close at Daresbury by the 22/3/95.
15/3/95 -- Portfolio Club
14/3/95 -- Atari FTP List Update
14/3/95 -- Towers II : Plight of the Stargazer
14/3/95 -- HENSA Atari TOS Newsletter Volume 8. No.5
10/3/95 -- Questions and Answers question 15 answered
10/3/95 -- Towers II release announcement
7/3/95 -- Atari Related Links Page
7/3/95 -- Information on viruses
7/3/95 -- CAIN Newsletter Volume 2. No.2

3/3/95 -- Lynx FAQ updated
3/3/95 -- Jaquar FAQ updated
2/3/95 -- Wolfenstein 3D Jaguar Review by Robert Jung
2/3/95 -- Iron Soldier Jaguar Review by Robert Jung
2/3/95 -- Jaguar Bubsy Bobcat (In Fractured Furry Tales) Review by Robert Jung
2/3/95 -- Jaguar Val D'Isere Skiing and Snowboarding Review by Robert Jung
28/2/95 -- AEO Newsletter Volume 4. Issue.3 in text and ZIP format

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include

NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

==========

U Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

From your Web browser choose to open URL and enter the following address:

http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

==========

U What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for
~~~~~

programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
**Volker Burggraf Atari Pages (German).
**Desert Star Software Home Page.
**ST Assembler Page
**BSM's Home Page
**ST Beer Mat Page
**The Organised Chaos Licenseware Home Page
**Index of /~jschlich/Jaguar/
**Lynx Pages
**Atari Lynx Page
**Atari Page by Frank Post (Partially German, partially English)
**MiNTOS Distribution and Information Page
**Julian's Atari Page
**Atari Ghostscript
**Atari Page by Robert Krenn
**Simon Gornall's Atari Pages
**Ben Halls Page (KSculpt + Calamus Information)
**"Data Uncertain" Software
**Kay's Home (MintNet)

**8 Bit Atari Page by Ivo van Poorten
**Atari Jaguar Homepage by Christian Svensson (very good and kept up to date)
**Jaguar directory

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

U Atari FTP List by Mark Stephen Smith (essential for the latest news on who provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.
**Information on Viruses.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about MiNTNet.
- AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters
~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
U AEO Newsletter containing the latest Atari news.

Newsgroups
~~~~~~~~~~

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari

alt.games.lynx

****

U Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
- Connect review by Frank Charlton (ST Format)
- Zero 5 review by Frank Charlton (ST Format)
- MIDI Grid review by Andy Curtis (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself. This section is now growing well now and Nick Peers from ST format recently expressed his interest in writing some reviews also.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

News and Announcements Pages
~~~~ ~~~ ~~~~~~~~~~~~~ ~~~~~
~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:

**Nova Graphics Board Announcement
**Sozobon C Announcment
**FTP site Announcment
**Fried Bits Eastern Coding Convention 3 Announcement
**Portfolio Club Announcement
**Towers II release Announcement
- Universal Virus Killer Book Announcement

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is not supported.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.
~~~~

- Towers II : Plight of the Stargazer Update! The latest news on developments.
U Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

U Falcon Demo FAQ. List of Demos for the Falcon, including some form of
information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to
be done with updates here. All files now list there size so you can see how large they are
before downloading. At the moment the following software is
included, with more to come:

**Apex Media Demo (Demo version of the animation and art package for the Falcon)
**Towers II (Shareware game)
- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)
U Speed of Light v3.8 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
U FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned
Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

U Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with lots more to come:

U Speed of Light v3.8 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB Awesome Golf Baseball Heroes
Batman Returns Basket Brawl Bill and Ted's
BlockOut BattleWheels Blue Lightning
California Games Checkered Flag Chip's Challenge
Crystal Mines II Dino Olympics Dirty Larry:Renegade Cop

Dracula the Undead Double Dragon Desert Strike
Electro Cop European Soccer Chal. Ultimate Chess Chal.
Gauntlet:3rd Encounter Gordo 106 Hard Driven'
Hockey Hydra Ishido : Way of Stones
Jimmy Conners' Tennis Joust Klax
Kungfood Lemmings Lynx Casino
Malibu Bikini Volleyball Ms.Pac-Man
NFL Football Ninja Gaiden
Ninja Gaiden III : The Ancient Shop of Doom

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

U Lynx FAQ
- Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently empty.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page
is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

**ECTS News
**Hyper Image page linked to (Makers of Jaguar game Hover Hunter).
- Jaguar CD Specifications
- Rebellion Development News
- Sinister Developments News
- Sensible Soccer News
U Coming Soon!
- Hand Made Software News

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing
more to this section myself. This page has been re-formatted thanks to
Holger Kipp. Reviews so far include:

Aliens vs Predator - by Eric S.Boltz
Aliens vs Predator - by Robert Jung
Brutal Sports Football - by Randy
~~~~~~~

** Bubsy Bobcat (in
Fractured Furry Tales) - by Robert Jung
Checkered Flag - by Robert Jung
** Cannon Fodder - by Holger Kipp
Cybermorph - by Robert Jung
** Doom - by Robert Jung
Dragon: The Bruce Lee
Story - by ?????
** Iron Soldier - by Robert Jung
** Iron Soldier - by Holger Kipp
Raiden - by Robert Jung
** Syndicate - by Holger Kipp
Tempest 2000 - by Robert Jung
** Theme Park - by Holger Kipp
** Theme Park - by Robert Jung
Trevor McFur in Cresent
Galaxy - Jer Howitz
** Val d'Isere Skiing and
Snowboarding - by Robert Jung
Wolfenstein 3D - by Robert Jung
** Wolfenstein 3D - by ?????

There are many more reviews to come.

Other Jaguar Stuff
~~~~~ ~~~~~~ ~~~~~

Miscellaneous information on the Jaguar. Information included presently is:

U Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ update for Jaguar
**50/60 Hz, games adjusting to resolutions list
**Jaguar Game Cheats
**More Raiden Tips
**Kasumi Ninja Moves List

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but
the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and/or MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson (Where is the response for these pages?)

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it. Sorry about the lack of updates recently, more to come.

Expect more links to Atari related pages in the future. There will be more newsletters, documents, updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials. Nick Peers of ST Format and Holger Kipp have offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to
~~~~

me.

Thank you and see you with the updates to these pages next month!

1601. Mega 2 woes

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-21 00:00:00 UTC
From: digiacom@panix.com
Message-ID: <3n8gaa$jss@panix.com>
Source record: 26620

>>>> ORIGINAL POST <<<<

I recently received a Mega 2 motherboard from a friend who has no use for it, since it doesn't work. He tried to upgrade the total memory to 4 megs. The layout of the motherboard looks like a Mega 4 except its missing the two extra banks of ram chips. He added the necessary sockets and capacitors for this addition. But upon further examination, a trace on the motherboard is broken and is lifting up.

>>>> PROGRESS UPDATE <<<<

I fixed the trace in question. Now when I power up the Mega 2 it displays a Black Foreground with uniformly spaced White vertical lines on a White border. It seems as if its normally booting up.

This color monitor (SC1224) works fine with my 1040 Ste.

A reply with an answer or where I can find technical info on the Mega 2 (ie. FTPsites, BBS, manuals, etc) would be greatly appreciated.

1602. Overscan...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-21 00:00:00 UTC
From: david.williams@deancoll.demon.co.uk
Message-ID: <513115081snz@deancoll.demon.co.uk>
Source record: 26621

BD:-> Has anyone any experiences with the Overscan Hardware mod for the
:-> Atari ST?
Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

Please don't mail me, as mail doesn't work yet at this site!!

1603. Re: Looking for NetBSD for Atari!!

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-21 00:00:00 UTC
From: volker@sfb256.iam.uni-bonn.de
Message-ID: <3n7ri2$hp8@news.rhrz.uni-bonn.de>
Source record: 26622

In article <D7CJzJ.KJr.0.-s@cs.vu.nl> ipoorten@cs.vu.nl (Ivo van Poorten) writes:
>volker@sfb256.iam.uni-bonn.de (Volker Brandt) writes:
>>You have to get the Atari boot floppies and the Amiga binary
>>distribution, since there is no Atari distribution yet.
>
>I tried to find the atari boot floppies you mention, but without any luck.
>Could you give us a more specific pointer?

Leo has just posted to the NetBSD mailing list that he is setting up a
complete NetBSD/Atari distribution, complete with updated README and
INSTALL documents.

So I suggest that you wait for the official announcement in
comp.unix.bsd.netbsd.announce, as it makes a lot of thing easier.

I'll dig out the exact location of the current Atari stuff on monday,
if Leo doesn't beat me to it.

1605. Re: IS THERE ANY WAY TO HOOK UP SLM-804 TO PARRALEL PORTS ?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-21 00:00:00 UTC
From: hallvart@oslonett.no
Message-ID: <3n951f$s5i@sinsen.oslonett.no>
Source record: 26624

hi,
I tried to write back to you but for some strange reason the mail bounced,
twice.
I was just thinking... maybe the mechanism inside the printer is a standard
one, and you might be able to bypass the interface that allows you to connect
it directly to the ST. Just a thought, I'm no expert, but I got the idea
when i found out that my 11 year old Panasonc dot-matrix printer has
an RS232 interface built into it! The manual said nothing about it, and
there's no connector for RS232, but I guess they made a parralel and
serial verison of the printer, the only difference being the connector
on the printer..

With a suitable switcher lead both the NEC MultiSync II and NEC 3D will do
low, medium and high res.

Unfortunately neither of these monitors are made any more, although I think
you can still buy clone versions of the 3D (I vaguely remember there being
an Amiga ones perhaps, or at least a suitable model).

This dawned on me the day after I replied and I put out some clarification!
I wasn't thinking about the two possible geometries. I suppose the
all-in-one drive scenario IS more common than the separate h/a one.

> 2.06 in this example) don't *buy* the chips from Atari Corp. but
> rather just buy blank chips and "burn" (program) them using an EPROM

This is probably true - though the dealer should be licensed to do this.
It is not unknown for software companies to grant dealers/end users the
right to make new copies of media - providing they pay a license fee for
each copy made.

> My TOS 2.06 chips didn't come with any official documentation, and
> there were no " (c) Atari Corp. " label or anything on them. I also
> saw one from a friend, bought from another source, and it looked like
> that too. Very "home made" sort of...

All the Atari TOS chips I've seen for sale have had this home made
look. This is not suprising really as ROMs are quite expensive to use for
small production runs. Its much easier to run off a few EPROMS.

> So, why am I asking this? I'd like to install TOS 2.06 for some
> friends, and it would save them a lot of money just to pay for the
> blank EPROMS. Just thought I'd check for legalities first....

This would be illegal as you have no right to make a new set of TOS 2.06
EPROMS. TOS is still copyrighted - even if Atari have been lax in dealing
with pirate copies.

Source record: 26629
Cross-posted to: comp.os.linux.networking,comp.sys.atari.st.tech

>Hello.
>
Hi...

Well, for the first thing, you seem to be using quite an old version
of the MiNTNet-package on the Atari-side. The up-to-date version
should be 0.70, and it has a slattach which can set the SLIP-Mode to
SLIP or CSLIP. Also, my version of stty (sorry, can't remember the
numbering) has an option '--help' (just like any GNU-prg), which will
blow your socks of as it produces about 3 screens of output.
>
>I did my testing using 'ping'. What daemons need to be installed
>for a 'ping' to work? Is that just 'inetd', nothing at all,
>or do I need something else?

You don't even need inetd, because ping works on a much lower layer of
TCP/IP.
>
Well, I do it on the Atari by doing
slattach -t /dev/ttya -r XXX.XXX.XXX.XXX -l YYY.YYY.YYY.YYY -p CSLIP &

This execs slattach for the device /dev/ttya with the remote-adress
XXX..., local adress YYY..., mode CSLIP. This sets up the
network-interface (you normally have to do this via ifconfig) and the
routing-information (normally via route) automatically.
Your devices should be set to the same speed on both machines, and
their mode should be 'raw'. You do this with
stty -s 19200 -(sorry, don't know the option now) RAW < /dev/ttya

Of course, you should use the name of your device instead of
/dev/ttya.

Well, try and write again, I might have a closer look at my configuration, if this
won't work.

> wonder-

> ing if there was a modification for the tablet.
>

The 8-bit track balls don't need a modification, you just flick a switch on it's underside, and it will work with any program that uses a joystick.

The touch tablet probably makes use of the paddle controler or light pen locations in the 8-bit. I don't know if the ST mouse port works on the same principle, but I've used an ST mouse on an 8-bit once I installed a driver. I didn't need to make any alterations to the cable.

I have a CTX multisync, should be compatible with NEC 3D, a very old model indeed, that I can access 3 resolutions.
And I have a Topcon SVGA also, again old model, that can only do interlaced mode for 1024*768 for PC. I can use it with mono only.
I think any SVGA mon can do this. Sorry, I don't know the connection.

1618. Overscan...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-22 00:00:00 UTC
From: david.williams@deancoll.demon.co.uk
Message-ID: <513157769snz@deancoll.demon.co.uk>
Source record: 26636

BD:-> Has anyone any experiences with the Overscan Hardware mod for the
:-> Atari ST?
Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

Please don't mail me, as mail doesn't work yet at this site!!

Source record: 26637

> Several years ago I came across a text file describing how to change the
> wiring on a clone-mouse to work with the ST. Does anyone have this
> information?

Depends on the type of PC mouse...

DMC Publishing sells a software driver that lets you use a MicroSoft style serial PC mouse with no modifications. I understand that similar drivers are available by ftp from Atari archive sites.

A PC "buss mouse" can be used with no software modifications if the wiring of the connector is modified. There are text files describing how to do these modifications available, again probably on the Atari archive sites.

I believe we still have these text files on CompuServe if you can't find them anywhere else...

I have the following Atari Computer for Sale:

Hardware:

Atari Mega STE 4
4 MB RAM
50 MB internal hard drive
Magnavox ICM135 14" Stereo Color Monitor
External DS(720K) Floppy Drive
Supra 2400 Baud external Modem
Beetle Mouse
Atari standard Mouse
Wico Joystick
3 2600 Joysticks

Software:

Pagestream
WordWriter
Word Flair II with FSM GDOS
Diamond Back II
various other utilities (Warp 9, look it, etc...)
plus MANY GAMES (Dungeon Master, Empire, Uninvited, etc...)

****
Everything is in MINT condition, and I have the original
manuals for the software/hardware, as well as the orginial
boxes for the hardware.

Shipping can be arranged. I would prefer US sales, payment
must be in US funds.

I am asking $700 or best offer for the whole package. Please
send me EMAIL at dogman@svpal.org if interested of if you have
an offer.

X-Newsreader: NN version 6.5.0 #1
Keywords: NetBSD/Atari
Lines: 15

Hello,

About a week ago, my port of NetBSD for the atari was released on
sun-lamp.cs.berkely.edu. Until now, it runs on only 2 TT's. What I am
searching for are extra test sites (2 is too little to catch those little
differences between the hardware revisions). If you like to try NetBSD and
are not afraid to run into a few problems, and help me solving them,
please contact me by e-mail.
It would also be nice to have someone with a Falcon. As far as I know
the hardware is simular enough to work.
If you like to try it before reacting, take a look at the directory
"pub/NetBSD/arch/atari" on sun-lamp or the mirror site: "ftp.luth.se".
The latter is far more easy to reach from europe.

Leo.

1627. HSMODA06 @ 48MHz?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-23 00:00:00 UTC
From: dsb@cs.duke.edu
Message-ID: <3nefa9$bsq@duke.cs.duke.edu>
Source record: 26546

I'm in the midst of setting up my new TT, and I just installed HSMODA06, only to discover that the same SCC.PRG that had been working fine on my MSTE is behaving weird on the TT --- almost all characters dropped, occasional lockups, etc.

Now, the docs warn not to run SCC.PRG from TT RAM, because "problems [...] could occur caused by a too fast access to the SCC." AFAICT it's running in ST RAM as it's supposed to, but the warning prompted me to wonder whether my CaTTamaran 48MHz accelerator could be having a similar effect. Has anyone run this combination successfully? Any configuration advice? Eventually I want to run remote X apps via SLIP on this thing, and that ain't gonna happen at 9600 baud.

Thanks.

1628. Help needed with 1.44 drive circuit

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-23 00:00:00 UTC
From: hallvart@oslonett.no
Message-ID: <3ndmnh$g79@sinsen.oslonett.no>
Source record: 26547

I need some help regarding the design and installment of a 1.44MByte disk drive in my STE.

Is there anyone out there who has experience with this who can give me some advice and help me out? I need someone to look over my existing circuits and tell me what modifications to make if any.

I also need some help with my new disk drive, a high density type,
Sony MPF 520-1, since I can't get any HD detect signal out from pin 2.
I want to make a "clean" modification (not a bunch of wires soldered here and there), so if possible I'd like to know which points to solder together/cut on the drive's PCB. I'm desperately searching for the drive's schematic, but haven't had any luck yet, so can anyone help me with that?

When I get done with the circuit I plan to fully document/illustrate it and upload it for anyone to read.
thanks.

yes, I have already gotten the info from them,and teh software seems
VERY professional indeed. The problem though is that I only need to make
a few relatively simple PCBs and I can't afford anything like this.
Any PD/shareware software for making PCBs?

The alternative is to get MSDOS software and run it on a PC (my uncle has one)
since there's lots pf PCB software available for it.

1630. IBM drive/Link II woes

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-23 00:00:00 UTC
From: Dan.Dreibelbis@balmybeach.gryn.org
Message-ID: <a5f_9504231806@tor250.org>
Source record: 26549

I recently bought a used 100 meg IBM drive
which has a similar number (WDS3150?) and am having a couple of
problems using it with the Link II:

1) it doesn't seem to like my original Conner 40meg drive, in
fact both drives absolutely refuse to boot if they're both
connected. They both have different device numbers, BTW, so I've
tried that. The IBM and my NEC CD-ROM drive both work OK together.

2) when used as my main drive, I have to warm boot the computer
after first switching it on after switching on the hard drive to get
it to recognize the IBM mechanism (which is weird, as I've had no
similar problems when using the Conner as my main drive).

If anyone has an idea on what I can do to reconfigure both
drives so they'll cooperate with each other, and not require a warm
boot to get going, it would be much appreciated......

... The only stupid question is the one you're afraid to ask.

1631. Syquest 270removable crash w. Cubase Audio & TT SCSI prob.

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-24 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3nfi9j$fqg@status.gen.nz>
Source record: 26550

My new 270Meg Syquest removable has crashed and damaged the cartridge beyond repair within one hour of switching it on! HELP!! This happened when playing back 4 Audio tracks only (30 second song), and my first recording with the program. Everything was going like a dream - -. the Audio just stopped and then the 270 started playing a symphony, now there are many dozens of bad sectors and unable to format (using AHDI 6.06 also tried formatting with ICD utilities. After a long time checking these two utilities say the problem is with the cables or connections! You can still hold data on most of the drive however, no good for recording.

TT030 SCSI2 Problem?
This same new 270 drive runs fine on the Falcon, fine with the ICD Link on the ST and the TT030. However it won't run throught he TT030 SCSI port, or only in bad fits and starts. It will format, write a couple of files but nothing else can be copied onto it (`Data may be damaged'). It always sees the SCSI ID as 0. My 200Meg SCSI1 drive runs fine through the TT030 SCSI. Syquest have told me that the drive is compatible with SCSI1 cards. Anyone out there, please, suggestions as to what is wrong.

Thanks very much for any help.

Hi folks,

After years of programming 68000 on the ST, I've now been away from it for a while... I want to write a little 68000 program that accesses the serial port on the ST, but can't remember how the hell to do it!

Atari ST internals contains minimal information in sections on the MFP and PSG chips, which describe things like the DTR, DCD, RING lines, etc. but I can't actually figure out where to put the data form READ/WRITE.

Please help.

Chris.

1634. FS: Digidesign Sound Tools editor for DAT

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-24 00:00:00 UTC
From: drichard@execpc.com
Message-ID: <3nf5k0$64t@homer.alpha.net>
Source record: 26553
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,fr.comp.sys.atari,comp.sys.atari.advocacy

For Sale: Digidesign Sound Tools system for Atari Mega ST. Note, this system REQUIRES a Mega ST because the DSP board plugs directly onto the Mega ST's bus. I paid over $2000 for this system, and am asking $450 or best offer. It's in very good condition and comes with original manuals, etc. If you're unfamiliar with the system, here's what it does:

The Digidesign Sound Tools system is a hard disk digital audio recording, playback, and editing system. It can be used for mastering CD's, tapes, etc. or for editing digital audio. The system I'm selling consists of the following 3 components:

1) DAT I/O digital interface for doing direct digital audio I/O (entirely in digital domain) from DAT, Mini Disc, DCC, or a CD player that has digital output. It has both AES/EBU and S/P DIF ins/outs. This is a separate box with cable that plugs into the DSP processor described below.

2) The Sound Tools DSP, a Motorola 56001 DSP processor on a 'card' that plugs onto the Mega ST bus. This processor speeds up DSP functions, and allows things like realtime EQ during playback.

3) The Sound Designer II software. This is the software that drives the hardware described above. In addition to recording and playing back digital audio it includes cut and paste editing, scrub editing, EQ, waveform redraw, normalization, regions and playlists, fades and gain changes, smoothing, mixing of sound files, sample rate conversion, and time compression/expansion.

In addition to the components described above I also have final beta copies of the Digidesign MasterList software (For putting together a Master List of several songs with timing, blank space, etc. for a CD or tape).

If interested in this system please reply via Email to drichard@execpc.com.

Thanks,

Dean

1637. Help : trying to connect SVGA to ST

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-24 00:00:00 UTC
From: limchung@iscs.nus.sg
Message-ID: <3nfnq0$t6q@nuscc.nus.sg>
Source record: 26556

Hi,
I was trying to connect my SVGA monitor to the ST to be used as a mono monitor. It didn't work and could anyone kindly offer any advice?

The specs of the SVGA monitor is as followed:

Scanning Frequency : Horizontal 30 KHz - 38 KHz
Vertical 45 Hz - 85 Hz

```
Pin 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15
================================================================================
Descrip- R G B - GND Red- Green Blue - Digital Digital - Hor Ver -
tion e r l Return Return Return GND GND Sync Sync
d e u GND GND GND
e e
n
```

The connections that I made are :

```
ST video (pin) SVGA (pin)
------------- ---------
monochrome (11) 1, 2, 3
Hor-Sync (9) 13
Ver-Sync (12) 14
mono-detect (4) 5, 6, 7, 10, 11
GND (8, 13) 5, 6, 7, 10, 11
```

The only image that I've got on the monitor is a small white rectangle at the centre of the screen. What could be the possible reason? Was it wrong to connect all the GNDs (return and digital) together?

Thanks.

Chung Yong

He was referring to the mod that allows one to use the Atari 8-bit trackball as a mouse replacement, instead of a joystick replacement. A pretty cheap way to go, actually, considering those units can be found for $10 in some bargain bins. :^)

IIRC, you cannot launch ST programs from the PC using Ghostlink. That's the
version I looked at anyway and that's sometime ago (a year or so?). Maybe
there's a newer version out. Check out the aftp sites.

>it has something to do with grounding

MIDI ports only use the top three pins of a 5-pin. The top pin is the
ground, and the two pins either side are used for the MIDI out signal. The
other two unused pins to output the MIDI thru signal. This can be a problem
if you are using non-MIDI 5-pin DIN leads, as some of them wire the two
used and two unused pins together. It's nothing to do with grounding.
The MIDI IN port is fine, only the out port is non-standard, and if you
use proper MIDI leads, it won't be the cause of any problems.

>I need to upgrade my 520ST. Which chips are the RAM (where are
>they located on the motherboard)? Where can I get replacements
>to bring me up to 1 meg?

There are several revision of ST motherboards. My 520ST have RAMS underneath
the power transformer, remove the power transformer board and they are
exposed. The RAMs in my 520ST were 1meg type and so I had 4 original chips. I
just plug in 4 extra 1meg chips and had 1 Meg. There were extra chips position
for them & there were no wire/runs to cut etc. On boards with 8 256K chips,
you will need to cut some wire/runs to get it working - rather messy.

Easiest is get a 4Meg RAM expension board.

1646. Re: copying TOS Eproms...

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-24 00:00:00 UTC
From: hutch@ilmen.lanl.gov
Message-ID: <9504242003.AA00506@ilmen.lanl.gov>
Source record: 26565

In a previous message, legal 'expert' sheppard_r@ix.wcc.govt.nz (Roger Sheppard..) wrote:

>You can do what you like with the Roms that you own, but ONLY for yourself..

OK... here we go again; dispelling more of Roger's misinformation.

When you purchase software (be it on floppy disk or encoded into silicon chips such as TOS ROMs) you do -NOT- automatically earn the 'right' to make copies of that software, even if only intended for your own use.

In fact, when you buy software you don't actually own it... it is only _licensed_ to you and that license does NOT include duplication rights unless the author gives you those rights specifically and in writing. Some software licenses do this, but not all of them. Read some of 'em.

The copyright holder (Atari, in this case) -might- not care what you do, but that's beside the point. Just understand that mere possession of the software does NOT automatically give you the right to copy it.

I've been meaning to try this myself but haven't quite got round to acquiring the right lead...

The problem is, what driver do you use for windows (or even DOS).

I can't find one for a Diablo 630, and if it exists it seems unlikely that it will handle graphics, as this part of it was (I think) added just for the Atari emulator.

It should be possible to run 'Ghostscript' on the Atari and set it to read directly from the serial port. Then use the windows postscript driver to print to the serial port on the PC. I would be very interested if anyone had actually done this (and how).

Alternatively the .PS file could be printed to the PC's hard drive and with 'Ghostlink' the Atari should be able to access the PC's hard drive as a slave, directly from a file selector on the Atari desktop, or from within the 'Ghostscript' postscript interpreter. Has anybody actually done this?

I have used Ghostscript to successfully print PC created postscript files (.PS & .EPS!) on an Atari, with an Atari Laser (and cannon colour inkjet) and it normally works quite well, the bit I haven't yet tried is the serial to serial lead (it can't be as slow as disk swopping with large files, can it?).

Hope this helps.

jason.

1648. Problem with PAL?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-25 00:00:00 UTC
From: dhohenst@gpu2.srv.ualberta.ca
Message-ID: <3nhu1c$k8k@rover.ucs.ualberta.ca>
Source record: 26567

Is there something wrong with Atari's PAL chip? I just got a math coprocessor put in my Mega STe and now Calamus won't work. After I pulled the PAL chip out, it worked great (but no math coprocessor now). Other programs I have that should work with the coprocessor just crash with it, even though GemBench says it's working fine.

1649. OASIS 1.04 Available

You have to remember the 10e ISN'T Epson compatible, only the ex and sx
models are. However, I use TeX at home, and for the best output I use the
10e mode, and set the program to use IBM settings.

So I would say try and get the drivers for IBM Proprinters 24XE or
whatever they are called, and try them. Of course what would be even
better is to read the printer manual to check compatibility.

I've replaced the cartridge in my BJ10ex several times, with no problems.
I now refill all my cartridges using one of those syringe & ink systems,
and that works fine too.
The only thing I can think of is that you are not doing the head-cleaning
operation (as described in the manual, hold down the [forward] & [reverse]
buttons as you turn on the printer) when you replace the cartridge.
If you are, maybe you should try doing it several times?

>
> Chung Yong

Hi Chung,
```

I had an SVGA monitor connected to my STFM as a mono
monitor and it worked O.K., but the connections I used
seem to be slightly different from the above - here is
how I had mine connected:
.....

Atari SVGA multisync (15-pin connector)

pin 11 (monochrome out) pin 1 (Red), pin 2 (Green)
and pin 3 (Blue)

pin 13 (ground) pin 4, 6, 7, 8, 10, and 11
(rgb and logic grounds)

pin 9 (Hsync) pin 13 (Hsync)

pin 12 (Vsync) pin 14 (Vsync)

pin 4 (mono detect) to Atari pin 13 (ground)

.....

This was for an SVGA 30-58kHz multisync with the following
15-pin D-sub connector (male) pinout:

Pin 1 Red Video Input Pin 9 No pin
Pin 2 Green Video Input Pin 10 Logic Ground
Pin 3 Blue Video Input Pin 11 Ident Output
Pin 4 Ident Output Pin 12 No pin
Pin 5 Ground Pin 13 H Sync/H+V
Pin 6 Red Video Ground Pin 14 V Sync
Pin 7 Green Video Ground Pin 15 No pin
Pin 8 Blue Video Ground

Pin 4 and Pin 11 are factory-connected internally to Pin 10

The above connections worked OK here with my particular SVGA
monitor, I'm not sure if your pinout is exactly the same but
perhaps there may be a difference as regards whether or not
the SVGA is a multisync.

Best Regards,
Brian

RC> trackball as a mouse replacement, instead of a joystick replacement.
RC> A
RC> pretty cheap way to go, actually, considering those units can be
RC> found for
RC> $10 in some bargain bins. :^)

I guess the mouse x and y pins could be somewhat identical to the potentiometer A and B pins. That would be my first guess since the potentiometers were not simply an on/off type switch, I think they varied from 0 to 128 in value.

Still it might be easier to simply run the software to make the joystick a mouse, hook up the track ball, and flick the switch under the track ball that lets it be used with any program that uses a joystick.

Any rate it is a good deal for adding a track ball to the ST.

Later...

From: BobR@cup.portal.com
Message-ID: <137590@cup.portal.com>
Source record: 26579

At least in the US, copying ROMs for "archival purposes" is NOT legal.

When the copyright laws were modified to allow making a "backup" copy of software you legally own because of the fragility of the media, ROMs were specifically exempted because they are not normally subject to the same hazards as magnetic media are.

Thus any "game cartridge backup units" are illegal, as would be copying TOS ROMs.

(Then again, this was pre-adoption of the Berne Convention. I dunno if that changed things regarding copying ROMs...)

1661. Re: Mega 2 woes

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-26 00:00:00 UTC
From: BobR@cup.portal.com
Message-ID: <137591@cup.portal.com>
Source record: 26580

The description of the screen on bootup (equally spaced vertical lines) sounds like the upper bank of memory is hosed...

The screen memory lives a the top of whatever memory is present when the ST boots up, thus it's in the second bank of RAMs (the added bank). The lines are caused by missing bits, probably a bad connection to one or more of the RAM chips... (each chip of the 16 in a bank provides one bit to the entire bank. In the case of the RAM in the Mega, the new RAMs would fill the address space from 2 megs to 4 Megs.)

Check over the solder joints at all the pins of the new RAMs, looking for bad or missing solder (it's easy to miss one when there are 16 chips times 18 pin per chip to solder).

There should also be three resistors added to enable the RAS and CAS lines to the new memory. I'm not sure exactly where they're located in the Mega, but they should be somewhere in the traces between the MMU chip and the new bank of RAM.

1662. Re: How to upgrade a 520ST to 1 meg

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-26 00:00:00 UTC
From: BobR@cup.portal.com
Message-ID: <137592@cup.portal.com>
Source record: 26581

The very best "upgrade" for a 520ST is not to do it at all.. but instead take the money you'd spend on an upgrade board and RAM chips, and put it toward buying a used 1040STe... very seriously.

As was mentioned, the 520STfm model CAN be fairly easily upgraded because it was based on the actual 1040 motherboard, with just half the RAM chips installed. If you DON'T have that model, upgrading is both relatively expensive AND not very reliable. (Also, the 520STfm can ONLY be upgraded to 1 Meg that way, no more memory can be added on the motherboard.)

The 1040STe uses easily available and installable industry standard SIMMs which can be bought inexpensively almost anywhere and can be added very simply and reliably.

The STe also comes with TOS 1.6 already installyd, FAR better than the TOS versions in 520STs. It also has improved graphics and sound.

Seriously, watch the "For Sale" ads here on UseNet, in local papers and on local BBSs for someone selling a used 1040STe.. it will be far more reliable than any hacked in memory on a 520 and likely less expensive in the long run.

(As an example, I bought a 1040STe with 4 Megs of RAM already installed for US$125 about a year ago.)

The ST does not have the analog (paddle controller) inputs that the 8-bit Atari computers had, so devices like the touch tablet don't work.. it also doesn't have the light pen support that was built into the 8-bit systems.

I know there WERE "professional" quality touch tablets available for the ST at one time, but I think these used the serial port for their interfacing.

Which partitioning-scheme was used for those drives? IIRC, the Spectre has
problems with AHDI-compartible partitions, if there are more then 4 of 'em.

ICD's format should work fine, though.

Unfortunately, while the SLM laser printers have "standard" printer engines, they have NO control electronics or memory. Those functions were served by the Atari computer attached to them. Thus they can NOT be connected directly to a different kind of computer.

Randy is correct that the Diablo emulator supplied with the SLM printers CAN work in a "slave" mode, echoing anything that comes into the ST's serial port to the printer, but this of course only works in Diablo mode, and ties up an entire ST computer system as the "slave".

Another way to print files from another computer would be to null-modem the files over to the ST, save them to disk, and them print them on the SLM printer, but again, there's no way to go directly from an IBM to the printer.

> a few relatively simple PCBs and I can't afford anything like this.
> Any PD/shareware software for making PCBs?

There was a demo of an old PCB package for the atari available several
years ago, I have to look up the name. All the save options were disabled,
but you could enter a layout & print it out at x2 the correct size.

Or, you could do it the hard way & use one of the CAD packages to generate
everything you need for a simple PCB.

I assume you know what to do from here on, but try posting to sci.electronics
for more information on the process of making PCB's.

I've got a BJ10 as well and the problem I had with dried up ink cartridges is when I refilled one. Are you following the instructions in the manual and on the BC01 box? The cartridge should be kept sealed in the box until you need it and should not be removed until its empty. Also never unplug the printer when its turned on.

From: johntsjr@aol.com
Message-ID: <3nn31b$35f@newsbf02.news.aol.com>
Source record: 26590

I have a 520ST with color monitor. It got me through college. For the majority of my computing, I've switched to a PC. Can anyone suggest any good uses for the old ST? Maybe set it up as a dedicated computer for a certain task? If anyone wanted it badly, I might consider selling it. E-mail me if interested. I still have Word Writer ST word processing software for it... and I also have STOS.

1672. Postscript Driver for Atari ST and SLM-804 laser printer ?

Newsgroup: comp.sys.atari.st.tech

Message-ID: <3nlnff$6dv@noc1.portland.net>
Source record: 26642
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I'm trying to get Ghostlink to work between my 1040st & 486. With the ports setup as described in the docs and the computers connected with a null modem cable..nothing happens when I try to open the drive icon on the ST, it locks busy until I abort with contorl/shift/alt.
Is there any extra configuration required on the PC side other than running PCslave and setting the baud rate & port? Any help would be greatly appreciated. Thanks!

Regards,
Michael

BD:-> Has anyone any experiences with the Overscan Hardware mod for the
:-> Atari ST?
Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

You should have no problem putting your peripherals in a PC case. One of the most talked about modifications at my local users group is a tower TT. It looks good, and you have 3 or 4 bays to put your toys in.

A word of warning to anyone who tries this. an ST/TT motherboard is apparintly longer then a PC's, so you need a big tower to fitit in. I think the power supple had to change sides to.

Jarl is out of here...

Difficult to say exactly,you don't say how often this happens & what the
time interval between problems is, but could be:-

(a) The drive needs more time to spin up- if the problem only occurs on startup
this might be it

(b) Intermittent cable problem.

(c) Defective drive mechanism.

Would suggest trying another cable & another drive in place of the Quantum.
BTW I am using a supra adapter & AHDI. Before I switched from using Supra
HD Utilities, I had problems with drives not being detected during a
restart several hours after the computer was started.

Fuck all, as far as I can tell. If I understand Ofir correctly, MagiCMac
is based on Magic 2, not Magic 3. It is the latter that partially implements
MiNT calls.

Anyone know where I can get any English programming docs for MagiC?

>If it is reasonable (ha!), some Mint shells should work.
I have tried several. The only ones that "nearly" work are the ones that
don't require MiNT (natch), but these are obviously less capable (no
bg jobs etc).

I wouldn't want to use more than a couple of feet even of shielded cable,
it can be very unreliable. SCSI on the other hand you can use loads of
unshielded ribbon cable without problems, because of having every other
conductor ground.

Occasionaly after a bad crash I have the same problem with a Link II
and a Quantum HDD. It doen't happen very often, sometimes a reboot
will fix it, but sometimes the read/write LED is on constantly and I
have to switch the HDD off as well.

If you have a bootsector on the floppy in your ST with a program
which waits for your hard disk to get up to speed, this can help.

Adrian

1692. Joystick problem

That's really all I need to know. I'm putting my falcon in a tower case
and the PC PS has a different connector than the Atari PS. The
PC PS has all the voltages for each wire on it as dose the atari PS, all
I was wondering about was the amperage. Would this cause a problem?

Thanks for the info in advance!!!
Rob

1694. Ghost link from ST to 286?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-27 00:00:00 UTC
From: py4sdh@bath.ac.uk
Message-ID: <Pine.SUN.3.91.950427204301.19641B-100000@ss1.bath.ac.uk>
Source record: 26663

Distribution: World
Organization: Not on your life.

Does anybody know if ghost link will run on a 286? I might be able to get a m40 dirt cheap, so i'd like to nick the hard disc space for my St. Well thats all a 286 is good for anyway!

I don't see any reason why it shouldn't. I have run it on an
8088 based laptop.

1696. Hard disk problems

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-27 00:00:00 UTC
From: rmccall@mcs.dundee.ac.uk
Message-ID: <3np7go$9h8@dux.dundee.ac.uk>
Source record: 26665

My Falcon is having consistent problems with its HD. For example if
the system crashes sometimes the only way to get it to re-boot is
by hitting the reset button. Using keys simply kills the machine
dead, ie the power goes off.

Another problem was the other day, the machine hung. When I rebooted
it had duplicated all files on partition D.

IS this a hardware fault, or a virus?

TOS 4.01, 68882 FPU, NVDI 2.5

S > new cartridge (although this time is the worst so far).

Now that is weird - I've got a BJ-5 (the membrane-switched,
one-colour only version of the BJ10-e) and have not had problems
like THAT. Clogged jets on the cartridge, yes, but.....

How do you have your printer set up - I've got mine set up so
it's on end with its optional sheet feeder. Maybe it's how it's set
up and which direction the cartridge is.

It could also be a bad batch of cartridges - were they from the
same batch?

Perhaps you could get in touch with Canon themselves - they
might have the best explanation.

Just some thoughts.....

... I get into enough trouble without a tagline!

ST folks,

Thanks, everyone, who answered my original post. It's great to have
a group like this around when you need information. I'm following everyone's
recommendations in regards to monitor placement.
One followup question however: Does a monitor magnetized by speakers
like mine has been, have some ability to repair itself if put in the proper
place? Does it have a degausing strip around the parimeter of the screen?
Or will it have to have service?

Thanks everyone,
This group is great.

Brian

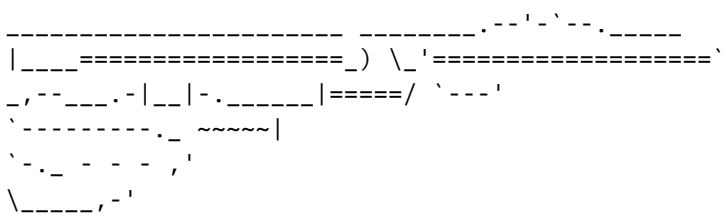
For sale:

Atari Mega STE with 4 Meg of Ram for $399, and you pay shipping.

Also for Sale is a Cannon BJ 10ex inkjet Printer, that prints at 360x360 Dpi for $150

Zoom Vfdx 2400 Modem with Fax class 1 & 2, Caller ID and VOice Mail $59 including STalker 3 comm software.



And finally an External Floptical drive with 5 Disk [of 21 Meg each, some loaded with lots of software] external supply and ICD Link and cable [a plug an go unit], it also reads HD disks, for $199.

Migraph Hand Scanner with Touch up and OCR Jr. software $69

Nova VME plus 16.7 Million colors card with True Paint, and Prism Paint 2 will sell for $300. Also a 15" Monitor SVGA low radiation up unlimited number of colors Multiscan Compudyne for $250 [practically new]

For any of the item above you pay the shipping. All items will sell in box with manual etc.

Interested? Mail me at mayolc@ucunix.san.uc.edu

JG>
JG> Any ideas? Thanks....

Some SCSI drives don't respond to the first command sent to them - to get round this you need a driver which will do re-tries. I use the Supra s/w and had a similar problem with a Micropolis drive. The solution was to install the driver provided for HDDs with removeable media (SUPBTRM.PRG} and use its configurer to allow it to do a few retries.

From: rgivan@cix.compulink.co.uk
Message-ID: <D7rrIt.Ey8@cix.compulink.co.uk>
Source record: 26498

I've installed Linux/68 + X11R6 but seem to be missing the library and include files for compiling X programs. Should they be hiding on my system somewhere - or where do I FTP them from?

I've installed the system using the Infomagic March CR-ROM set - so if its on there it would be useful.

Even the names of the relevent archives would be useful :-)

Thanks

:-)

Roland.

Not true. According to the Copyright Regulations (Computer Programs) Act, 1992 (look it up if you don't believe me...) In the UK it is legal to make a back up copy of any software you own, and to modify the software in anyway for your own use.

Only if you are distributing either the backup or modified version are you breaking the law.

> > patch Roms etc, and this is Legal one 100%...
> Just because there are programs to do it - doesn't make it legal.

True in general, but not in this specific case. :)

Hello,

About a week ago, my port of NetBSD for the atari was released on
sun-lamp.cs.berkely.edu. Until now, it runs on only 2 TT's. What I am
searching for are extra test sites (2 is too little to catch those little
differences between the hardware revisions). If you like to try NetBSD and
are not afraid to run into a few problems, and help me solving them,
please contact me by e-mail.
It would also be nice to have someone with a Falcon. As far as I know
the hardware is simular enough to work.
If you like to try it before reacting, take a look at the directory
"pub/NetBSD/arch/atari" on sun-lamp or the mirror site: "ftp.luth.se".
The latter is far more easy to reach from europe.

Leo.

1714. FS: Digidesign Sound Tools for Atari Mega ST

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-28 00:00:00 UTC
From: drichard@execpc.com
Message-ID: <3npq3l$9tb@homer.alpha.net>
Source record: 26671
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech,fr.comp.sys.atari,rec.music.makers.marketplace

For Sale: Digidesign Sound Tools system for Atari Mega ST. Note, this system REQUIRES a Mega ST because the DSP board plugs directly onto the Mega ST's bus. I paid over $2000 for this system, and am asking $450 or best offer. It's in very good condition and comes with original manuals, etc. If you're unfamiliar with the system, here's what it does:

The Digidesign Sound Tools system is a hard disk digital audio recording, playback, and editing system. It can be used for mastering CD's, tapes, etc. or for editing digital audio. The system I'm selling consists of the following 3 components:

1) DAT I/O digital interface for doing direct digital audio I/O (entirely in digital domain) from DAT, Mini Disc, DCC, or a CD player that has digital output. It has both AES/EBU and S/P DIF ins/outs. This is a separate box with cable that plugs into the DSP processor described below.

2) The Sound Tools DSP, a Motorola 56001 DSP processor on a 'card' that plugs onto the Mega ST bus. This processor speeds up DSP functions, and allows things like realtime EQ during playback.

3) The Sound Designer II software. This is the software that drives the hardware described above. In addition to recording and playing back digital audio it includes cut and paste editing, scrub editing, EQ, waveform redraw, normalization, regions and playlists, fades and gain changes, smoothing, mixing of sound files, sample rate conversion, and time compression/expansion.

In addition to the components described above I also have final beta copies of the Digidesign MasterList software (For putting together a Master List of several songs with timing, blank space, etc. for a CD or tape).

If interested in this system please reply via Email to drichard@execpc.com.

Thanks,

Dean

1715. Re: Do you know anything about MIT 68k syntax?

Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

Please don't mail me, as mail doesn't work yet at this site!!

You can't change the limit.

Rewrite the code to open a smaller number of files.

Have you ever worked with a PC (hardware)? They're really bad, I suppose because it's a cut-throat market. At my last place of work, we had about 60 PCs controlling test equipment, and on an awful lot of them the ports (parallel and serial) died at one time or another. Not all were cheap clones either - some were Compaqs, although with the Compaqs the PSU normally died before the ports had a chance!

Sorry, I was wrong. Only one EXTERNAL memory transfer per cycle.
An instruction can *refer* to three external memory locations, but
extra cycles will be inserted to cope with them.

So, when will it be ready? I've originally heard that will be ready by the
end of December last year, then by the end of Feburary, I've even told that
it will be coming out in two weeks. And that was in March...
But it's good to know that you are still in development, at least.

See? I got carried away. Than this is what you get when trying to
use fancy words and don't take the time to look them up. I humbly
admit to my *awful* spelling mistake and hope that in only a few years
you all will stop pointing at me and whispering to each other about
this black day in history.

Sigh. I *hate* it when such a thing happens. It makes my whole
posting look stupid and makes me feel like sincrap.

I guess the only way to make up is to write some good program and
release it PD. I'll try. If you can come up with a reasonable name
for a new word processor using SpeedoGDOS fonts, I'll write one.

Oh, and you'll all have the right to copy, destroy or alter it, burn it
into EPROMS, write it on toilet paper or *whatever*.

Sigh. Mumble.

Well, if you just want to Mtask GEM apps, Geneva is supposed to be a really
good option. I put my order in two days ago, and have read (from Dan Wilga
on GEnie) that the next version of Geneva will support Mint, replacing MTOS's
AES, thus faster :)

If you resolder the joystick port (and mouse while you're at it), you'll probably find it works ok again. This is due to the stupid positioning of the ports. When my ports went, it took out the whole machine, it wouldn't boot. So I sent it to The Upgrade Shop, and they just resoldered the ports.

1731. PARI?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-04-28 00:00:00 UTC
From: cordes@ac.dal.ca
Message-ID: <1995Apr28.083022.37726@ac.dal.ca>
Source record: 26688

Would anyone happen to know if there's a more recent version of PARI around than the Feb/91 release (v1.35)? PARI (sometimes called GP) is usually referred to as a multilple precision interactive calculator - it's a very nice program from a bunch of French mathematicians. The file on aa is gp.zoo; the date on the archive may be 1992 or 93, but I'm pretty sure it's the old v1.35 release.

Thanks,
John

Good for you.

TOS 1.2 with the right patch(es) is perfectly useable with a hard disk.

Upgrading from 1.2 to 1.4 no doubt has many advantages, but 1.2 is still
quite quite usable. Going from 1.2 to 1.4 means you have to run a different
set of patches though..

For my every day use (1.2) this means the folder fix (which is built into
the ICD booter anyway), FATSPEED and a serial patch.

Good point, and if you get a decent 2.06 upgrade, you can have the board
house both sets of ROMs and switch between them.

compared to legal costs? Can you say why bother?

It wasn't due to lack of legal grounds, I'm sure.

>And install FATSPEED and it will speed up again. ;-)

Sh> NO...!!

YES!!! Fatspeed WILL speed up floppy/hard drive access times on
Tos 1.02. If that's all he's interested in, then it works fine, and it's
extremely cost-effective.

Sh> Get TOS 1.04 Roms and get all the New Features, I would never
Sh> use a Atari at all unless it had TOS 1.04 or later....

That's your opinion. Personally, I don't ever see the desktop, so
TOS 1.02 works fine for me. To each their own, Roger. Stop beating people
over the head, for God's sake.

I found it can take a while to find the correct baud rate and that varies between 286 / 386 / 486 machines. You may well need a hi-speed modem fix prg in the auto folder on the ST as with a 486 you should get it to work easily at 19200. Also make sure handshaking is off on the ST. I use a German CPX file (MODEM.CPX) to fix this for me and use HSMODEM1.PRG in the AUTO folder. Take your time when changing the baud rate on the PC as it can take a while to lock in when trying different settings.

I have seen and heard of it working OK on many combinations of ST(E) and PC so keep at it.

HSMODA/RSVE Mod is the way to go, Connect and other German software supports it, and from memory can go to 115kbps, it changes the low baud rates to high ones...

You can make is your self but you have to get a GAL programed, but I think you can get all this from the Author and I think a UK firm....

There is no real way to do it in software...

BD:-> Has anyone any experiences with the Overscan Hardware mod for the
:-> Atari ST?
Yes, I run the public domain modification in my ST, and it is pretty ace.

BD:-> I see Compo sells a kit for about 50 ukpounds, but have also heard of
:-> a PD solution. Which is more compatible with most GEM applications
:-> (or for that matter X11 under Mint?) or do they both do exactly the
:-> same job?

The PD one DOES run under MiNT and X, but you can't use it with just MiNT, as
text scrolling doesn't work. GEM also works with no problems, but some GEM
stuff like Arabesque, for instance, gets it blitting routines in a twist
and make a mess on your screen. Most of the newer software works with no
problems and it is only the minority of older stuff that causes a problem.

BD:-> BTW the hardware I am using is a 4MB STFM with PAK/3 accelerator
:-> board.

I use a 4Mb ST with the System Solutions MM-100 or 140 or whatever mono
monitor. This gives me a 752 x 480 resolution which is lush under X.

How good is the PAK, BTW. Have you tried linux with it?

Please don't mail me, as mail doesn't work yet at this site!!

> Just understand that mere possession of the software does NOT automatically
> give you the right to copy it.

As I mentioned before, I'm not entirely sure how the adoption of the Berne Convention affects this issue, but the United States copyright laws were changed in the 1980s to allow the creation of "archival copies" of software without the expressed permission of the copyright holders because of the fragile nature of the media used.

Thus you DO have the right to make one backup copy of software that comes on floppy disks.

The new law specifically excluded copying ROMs because they are not as fragile as magnetic media.

That looks to me like the old Conner vs. TheRestOfTheBunchDrives.

I've seen this quite often a couple of years ago. The Conners don't behave correctly according to the SCSI-specs, and therefore give other brands a hard time.

I don't know of a cure for it, other than dumping that mechanism :-/

> 2) when used as my main drive, I have to warm boot the computer
>after first switching it on after switching on the hard drive to get

Perhaps the drive needs a Unit Attention or s.th. like that!? Perhaps that can be configured with one of the common harddisk tools, e. g. SCSI-Tool or Diskus. Wouldn't wanna bet on this, though.

Well, I didn't have to replace a PAL, but I did have to install one.
And I figured out it I jiggle it just right, It works with everything.
There's some loose connection in the socket someplace (great).
I just wish programs that could make use of it, did! All the JPEG and
MPEG viewers want a DSP, but won't look for an FPU, which will do the
job, in a pinch. Only the Falcon has a DSP. Falcon, MSTe, and TT have
FPU sockets.

Hello out there!!

I have an old 520STfm w/mono monitor, upgraded to 2.5meg ram, with a Toadfile 44meg removable media syquest drive, Spectre GCR. I have some software, but the most useful title (In my opinion) is Notator v2.2 (a midi sequencing and music notation package). I also have an HP Deskjet Plus printer. All items are in excellent shape and work very well.

I havent used this equipment in about two years, and am thinking that I may as well sell it to someone who could use it. How much would this stuff be worth in the current market, and is anyone out there interested in it??

Thanks in advance!

>I was wondering about was the amperage. Would this cause a problem?

No problem, most PC power supplies can handle up to 20 Amps at 5 Volts and more than 5 Amps at 12 Volts, the Falcon's power supply is rated at about 7 Amps at 5 Volts and 0.2 Amps (no typo..) at 12 Volts. On the PCB of the power supply there is usuallly some small print which states what voltage comes out where.

Good on you for speaking out, we think alike....

Yes those hyped USA copyright laws that are all Hot Air, from what I have read
on some GEnie posts..

Why didnt Atari take Kaos to court...??

Here in NZ copyright is not infringed unless money is invoved, we have many
many software hire libaries here....

So you USA people what I buy I own, and I can burn it and trash in any way I
like and I can fix the Bugs that you put into it as long as there is no
money invoved...

So come on you Yanks get a life and wake up to what the reast of the world is
doing, may be you can bully other nations but you can't bully New Zealand,
we have stoped your Nuk ships from coming here for good....

: Difficult to say exactly,you don't say how often this happens & what the
: time interval between problems is, but could be:-

: (a) The drive needs more time to spin up- if the problem only occurs on startup
: this might be it

: (b) Intermittent cable problem.

: (c) Defective drive mechanism.

: Would suggest trying another cable & another drive in place of the Quantum.
: BTW I am using a supra adapter & AHDI. Before I switched from using Supra
: HD Utilities, I had problems with drives not being detected during a
: restart several hours after the computer was started.

Thanks for the repy Gerry. I think that (a) might be the answer, (b) and
(c) are not the problems. I will also keep in mind the AHDI utilities if
the problem keeps occuring.
Regards, Julian.

>Can I use a standard PC case with ST peripherals?

Yes.. that's a popular choice. The power supply in a typical PC case is more than adequete for anything you'd want to mount in the case, and there should be plenty of mounting bays for drives and other things.

In fact, a rather popular modification is to remount the entire ST motherboard inside a tall tower case and use an IBM keyboard interface adapter to connect a detached keyboard PC-style.

The problems with doing this are first, making sure the case you get is large enough to hold your ST motherboard (Mega STs are easier to fit), and second, bringing all the connections out from the ST motherboard to the standard connectors on the PC case.

Many of the ST connectors are not standard, so you have to come up with some way to plug in your monitor and floppy drives, but the connectors to make extension cables ARE available (try Best Electronics, whose phone number I've unfortunately lost track of at the moment).

Special PC style cases ARE made specifically for the ST, but unfortunately these are rather expensive by comparison with a $79 PC style tower case.

If all you want to do is mount a hard drive, an inexpensive PC case is ideal.

>all I was wondering about was the amperage. Would this cause a problem?

As long as the power supply in the PC case can supply AT LEAST as much as
the Falcon will draw, there will be no problem.

The fact that the PC power supply undoubtedly can supply MORE current than
the Falcon will need is NOT a problem. (It's like having power in reserve..
the Falcon will only take what it needs.)

I successfully used it on an Amstrad 2286. The only disadvantage I found was
a maximum baud rate of 9600, probably as the drive was a slow RLL which was
double spaced using Stacker which slowed things down a lot!

I've recently got my hands on a nice 19" monitor and I've got it working
on my STe quite nicely, however, ST High res looks very blocky and
the text is too big to read. I would like to know something about reflex
graphics cards, or another graphics card which works on an STe with
a T28 accelerator and compatable with the operating system (MiNT).
I'd like a resolution of about 1280 x 1024 in monochrome. The price
can't be too much as I'm a student with no cash.

~~ What's the point of MS Windows, moving the power switch to
. the 'off' position is much quicker and easier!

Recently I got sick of my builtin IDE disk, which
was overheating the system anyway. And now I'm running
solely with my SCSI harddisk(s). The only thing which bothers
me now is, that the boot procedure takes quite a while
longer. I think its because the Falcon wants to boot
off the IDE disk, or wants to find it in any case, and
takes a long time to time out.

Is there a way to get things going more quickly ?

Thanks in advance
Nat!

AFAIK this is what most people do. I've got four (count 'em!) SCSI hard drives stuck in an old (and really, really heavy) NCR TOWER case, along with a 200W power supply and an ICD AdSCSI+ host adapter. Works great, and there's a tonne of room inside, so I don't have any problems with heat.

I typical PC mini-tower case or a used full-size AT case would work just as well, but this TOWER case was free. I just had to take out all the old power supplies and PCBs (the TOWERs were 68000 and 68010-based UNIX systems many years ago).

My Atari does bomb very fast while booting when older TOS versions are
installed then 1.4. The only thing which does work is startup directly
with MagiC or something else.

TOS 1.0 and 1.2 are horrible to use, they should upgrade immediate!

Greetings,
Koos

Maybe it was the ROMs situation that I was thinking about. Sounds about right. And we all know that some 'Licensing Agreements' were restrictive well -above- the letter of the law, anyway.

But it doesn't matter really since it is a moot issue anyway. No one really cares what you do with your own copy of software as long as it remains YOUR copy and you don't call for support after you modify it. :)

Thanks for the added info, Bob.

Hi There!

I am in need of help. It's as simple as that. Here's the problem:

I want to run a cartridge port network (Lantech101) using a PAK68030 fitted to an Atari STe 4Mb. The software I use at present is PowerNET. This is basically PowerDOS with a NETWork driver bolted on. This software completely fails to drive the network with the PAK system switched on. The driver loads but the network does not become active. Does anyone know of a fix for this? I believe the PAK board uses TOS 3.06, is this the problem? Does anyone out there know how to make the PAK run with TOS 2.06? I have heard that this may be possible. I am looking for compatibility, folks. If I can't get the network up and running by fair means or foul then the PAK is of no use to me. I have two Networked BBS's to keep running and I would like to use the extra speed advantage that the PAK provides.

I have heard of a program called Universal Network which is an alternative way of using this cartridge port networking hardware. If anyone has a second hand copy of the Universal Network Software that I could beg, steal, borrow or even buy I would be very anxious to hear from you.

Finally - and as a last resort - does anyone have an Adspeed ST 16Mhz upgrade? I already run one and it supports PowernET just fine as well as enabling use of high speed serial port mods as well. At 8Mhz with PowerNET loaded I cannot use a 28800 modem effectively, the processor is too tied up.

There must be someone out the who can help me in one way or another. Please email me as soon as you can. I can be reached at the following addresses:

<andyc@adlib.netkonect.co.uk> <acurtis@theshack.demon.co.uk>
<Andy.Curtis@adlib.centron.com>

Thank you in anticipation!

Cheeers,
Andy.

> This may be a FAQ, but can I use a VGA or SVGA with my 1040STfm?

For all three resolutions? That'll be tough.

ST-high should be possible, but newer monitors won't sync the colour ones.

Here's a list (partly German, but the figures speak for themselves, don't
they):

------------------------------cuthereplease-----------------------------

Datei: MONITOR.TXT ï¿½ Michael Ruge Rï¿½sselsheim, den 11.11.1993

Email: Michael_Ruge@WI2.MAUS.DE)

Einige MultiScan-Monitore haben einen H.- und V.-Frequenz-Arbeitsbereich,
der auï¿½erhalb der H.- und V.-Frequenz liegt, die der ST/STE durch die Hard-
ware vorgibt. Diese Monitore kï¿½nnen die gewï¿½nschten Auflï¿½sungen nicht wie-
dergeben und kï¿½nnen ggf. Schaden nehmen.

Um einen MultiScan-Monitor am ST/STE (in allen Auflï¿½sungen) zu betreiben,
muï¿½ der Monitor die Horizontal-Frequenzen aller gewï¿½nschten Auflï¿½sungen
darstellen kï¿½nnen.

Diese sind beim ST/STE in:
Farbe - 15,625 KHz
S/W (SM124) - 35,700 KHz

Diese sind beim TT030 in:
Farbe (VGA) - 31,500 KHz
Monochrom - 72.000 KHz (NUR TTM194/TTM195/Protar 19Zoll Monitor mit
ECL-Eingang)

Diese sind beim Falcon030 in:
Farbe (RGB/TV) - 15,625 KHz
Farbe (VGA) - 31,470 KHz (~31,500KHz)
ST-Hoch (VGA) - 31,470 KHz (~31,500KHz) mit 60Hz Bildwiederholfrequenz
SM124 (SM124) - 35,700 KHz mit gewohnten 71HZ Bildwiederholfrequenz

Er sollte also einen H.-Frequenzbereich von 15,625 - 35,7 kHz haben, wobei
das Frequenzband auch grï¿½ï¿½er sein darf, also z.B. 15,5 - 38,5 kHz.

Ferner muï¿½ der Monitor auch die Vertikal-Frequenzen der gewï¿½nschten Auflï¿½-
sungen darstellen kï¿½nnen, da er sonst nicht synchronisiert wird.

Diese sind beim ST/STE in:
Farbe - 50-60 Hz
S/W (SM124) - 72 Hz

Diese sind beim TT030 in:
Farbe (VGA) - 60 Hz
Monochrom - 72 Hz (NUR TTM194/TTM195/Protar 19Zoll Monitor mit ECL)

Diese sind beim Falcon030 in:
Farbe (RGB/TV) - 50 Hz Interlaced oder auch nicht
Farbe (VGA) - 61 Hz
ST-Hoch (VGA) - 61 Hz
SM124 (SM124) - 71 Hz

Er sollte einen V.-Frequenzbereich von 50 - 72 Hz haben, wobei ebenfalls
das Frequenzband wieder grï¿½ï¿½er sein darf, aber - wie bei der H.-Frequenz
- die beiden Frequenzen beinhalten muï¿½.

Reine VGA-Monitore sind zum Betrieb am ST/STE vï¿½llig ungeeignet!
(Ich kann Dir genug Monitore zeigen, die SThoch eben nicht machen, weil es
reine VGA-Monis sind. Also ist ein Blick in die Doku dringend angeraten, ob
der Typ 38KHz horizontal macht, denn auch 35.5KHz-Bï¿½chsen liefern z.T. sau-
mï¿½ï¿½ige oder gar keine Bilder, und die reinen 31.5KHz liefern ï¿½berhaupt kein
brauchbares Bild.

------------------------------cuthereplease------------------------------

>If so, what additional hardware/software would I need? Unfortunately, I

Nat, Not sure if this will work or not - but if you are running
the ICD utilities, you might try telling ICD to skip scsi id 16
(that is the value it assigns to the IDE drive - and I know that
16 is beyond 0-15. I suppose they just use it internally to make
identification of the IDE easy.) You can also turn off scanning
of any other scsi ids that you do not have installed. It should
speed up your boot access. Wayne Booth

Geoff, I think Migraph made a hardware adapter that allowed you to use
their scanners on the falcon. It may have also included a software
patch/upgrade because I think they came in a different port for the
falcon. If I remember right, the upgrade was somewhere in the vicinity
of $69 or $79US. I am not positive the upgrade would work with the
Golden IMage scanner but it seems to me that Migraph sold that scanner
for a while so there is a fair chance that it would. I don't have
Migraph's address handy though. Wayne Booth

Hi all,

Could someone tell me what the verdict was in the IDE vs SCSI case? I keep hearing about problems with SCSI on accelerated Falcons with high resolutions and speed loss compared to (even!) ST DMA. I seem to remember that I had to buy a SCSI anyway (even if they're harder to come by and maybe a bit more expensive). So why would I want to do that? I remember something about being better (faster?) in multitasking. Can anybody explain to me why I'd better buy SCSI?

Regards, and thanks in advance,
--

Just plug in a 4 EPROM set of plain unpatched TOS 2.06. It works flawlessly.
I've built a PAK/3-020 and a 030. The first test of the 030 was @ 16 MHz and
TOS 2.06. After that I managed to get a patched 3.06 and went to 32 MHz.

The STFM has a PSU built in. You need a 'kettle' type lead for the mains.

For the video - an ordinary RF lead to connect to a TV. A monitor will need a special lead.

Don't forget to make sure you get a mouse - you will need it!

:-)

Roland.

Message-ID: <1995May1.144356.15257@zippy.dct.ac.uk>
Source record: 26405

Having recased my ST, my hard disk is in the same case as the motherboard, so it has an IDC-type scsi conenctor, whereas my host adaptor has a centronics port. Does anyone have the pinouts to either connector ? Failing this, if you have a dead hard disk, then I am after the lead that connects the external socket to the internal drive. Can small costs.

thanx

the hatter

What about the following:

I recently obtained a TT board with a German TOS 3.06 on it, my own TT has TOS 3.06 UK version, as I use UK keyboards I'd like to reprogram the german TOS 3.06 Eproms with my 3.06 TOS. In fact I'm swapping one TOS for another.

Would this be legal ?

|> dare to think of how slow it will be on a ordinary ST!

You don't have to use MultiTOS to run MiNT. Would be possible to write a
GEM based browser that used MiNT-net & have it run under single tasking
GEM just as well. If someone compiles the MiNT-net & MiNTlibs libraries
for Lattice C, I'll do it my bloody self just to prove a point (bet it would
be fairly easy if you poach the actual http code from chimera or Lynx).

|> Thats Ehy I'm trying to make a WWW-browser which don't need MTOS to run! and

|> the Com-port, with a seperate standard like MiNT-net this would be possible,
|> but for MiNTnet I think someone else is already programming a WWW-browser And
|> you could always see mine as a substitute for those that don't want ot run MinT
|> just to be able to get out to the net! (or something)

Another approach is to take the TCP/IP code from KA9Q / NOS and bolt a GEM
shell onto it....you will still need to implement http on top of that though,
the MiNT-net way is easier to code.

Craig.
(Who doesn't really care, 'coz he has Chimera running fine under MiNT-X+Fvwm)

From: waldi@moacs.indiv.nl.net
Message-ID: <A3LZBCM@moacs.indiv.nl.net>
Source record: 26410

Hi,

I would like to use the system and VME software interrupts. The
former one lies at IPL 1, while HSYNC lies at IPL 2. Off course
I don't want those ~70000 horizontal blanks per sec. to get
through to the CPU. Would there be any negative side effect
if I simply turn off the HSYNC int. in the SCU's sysmask
register?

Waldi

Hmmm ,nice idea .. . but then the ST serial port is limited to
19.2K. The data transfer speed rate will be even slower than a
normal DD disk drive!

To improve the speed both the ST and the PC will require a bit of work.
And I'm not sure wheater it's possible to improve so much that the speed
comes so high as of a fast harddrive. If that an be done then surely
it will be much better to buy a 286 or even a real cheap XT with HD than
a ST harddrive.

K> how,what, where ect. Any help from anyone would be appreciated.

Apart from the odd bit of cabling you need a host adaptor to attach to the ST DMA port - this connects to the 50-way socket on a conventional SCSI drive. You will also need a power supply to run the kit and some driver and utilities s/w.

You can get the whole lot as a package (new or second hand) or search around for the bits. HDDs aer easy to come by. The bit you may have difficulty with second-hand is the host adaptor although, in theory, any one upgrading from an ST with HDD to the Falcon should have an h/a spare (as the Falcon has an integral SCSI interface).

Second-hand the whole lot should cost less than £120 for around 120Mb.

JG> Thanks, regards.........

Ah, it was just that, was it. I have stuck the ICD COLDBOOT in the AUTO of a permanently loaded floppy to get round this. Time delay of 10 secs is enough for my slowest drive to come up to speed.

I think you will find that the STFM has an integral PSU. It was some of the
early ST and STM which needed the external "brick".

Can't you tell from the connectors on the back? An external PSU connects
through a 6-pin DIN at the far left (looking from the back).

You need to be more specific of the ST's type. If it's an 'E' or an 'e' you
can *probably* use 256k SIMMS, and if not, SIPPS.

If it's an FM or other, it all because more complicated and outside my
first-hand experience.

My model of what's happening on reset is:

0. Usual memory checking...

1. TOS tries to read a bootsector
the order being

Floppy (maybe not)
IDE
SCSI

Now if there's no IDE drive connected the Falcon waits
quite some time before it timeouts and then moves on
to the SCSI where it pulls in the boot sector.

2. Now AHDI is loaded, which again looks for the IDE device
taking yet some more time and finally checking the
SCSI devices.

How can I reduce any of the two timeouts ? I don't want to
change drivers.
I fiddled with the Delay in the NVRAM but that didn't have
any noticeable effect.

Thanks for the replies I got (and hopefully will get)

Nat!

I don't know if this the correct group for this question but I had to ask.
Could anyone give me info on the comm protocol for "ATARI Home Computer"
-> ATARI 1020 Color Printer? This printer looks to have been made several
years ago.

Thanks in advance,

Joel A. Kunze

1808. Falcon: SCSI port died... Help !

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-02 00:00:00 UTC
From: gert@ttgk.nextjk.stuyts.nl
Message-ID: <Up-FECXFBUR@ttgk.nextjk.stuyts.nl>
Source record: 26427

Hallo,

A friend of mine asked me to look at his Falcon because his SCSI port recently died... After connecting some SCSI drives from another Falcon owner the busy light of that SCSI drive stayed on and the system didn't recognized any SCSI devices. Back at his own place he connected his SCSI drive and the same problem. I tried at my place with his Falcon connected to a SCSI CD-Rom and the same, busy light of the drive stayed on all the time and the Falcon failed to recognize any SCSI devices. Sometimes it returned 'SCSI ID4: @@@@@@@@@@' (Hushi driver) but most of the time nothing at all. The internal IDE runs just fine as does the rest of the Falcon.

Anybody got a clue what might be wrong, I guess the SCSI driver chip has gone to silicon heaven but I'd like to be sure before attempting to replace the SMD bugger.

I've also tried to access the SCSI chip (from GFA Basic) to determine which line of the SCSI port might be faulty. On my TT, I can access the chip by using SPOKE and PEEK without problems. On the Falcon however I get a BUS-Error (2 bombs). AFAIK the Falcon and TT use the same hardware addresses for the SCSI chip. ($FFFF878x) I also tried accessing it from a little assembler program, first entering supervisor mode and then executing some simple byte read ops. on the port, but again 2 bombs.... I don't get it, why can I access the chip on the TT but not on the falcon???

1810. Wizztronics Falcon RAM-board. Any experiences?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-02 00:00:00 UTC
From: matija@sirius.ijs.si
Message-ID: <1995May2.124347.1885@cathy.ijs.si>
Source record: 26429

I am considering buying the Wizztronics Falcon RAM-board, because the Hard&Soft ram cards uses 30 pin RAMs and is finicky. Apparently Wizztronics board uses the more modern 16MB, 70 pin RAMs.

Does anybody have any experiences with instalation? How hard is it to do?
And most important: would it fit into a falcon that has a H&S speed resolution enhancer fitted? (One more: do you think it will work with 20MHz bus speed?)

I'll be gratefull for any hard data on this subject.

1811. How to upgrade a 520ST to

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-02 00:00:00 UTC
From: Jeff.Thomas@balmybeach.gryn.org
Message-ID: <095_9505070047@tor250.org>
Source record: 26430

D > I need to upgrade my 520ST. Which chips are the RAM (where are
D > they located on the motherboard)? Where can I get replacements
D > to bring me up to 1 meg?

The 520ST is simply a wanna-be 1040ST. They have the space to add the extra
512K to the board.

Your going to need 256K DRAMS to upgrade the 520ST to 1 meg. You will need
16 of the memory chips, and you'll need a few resistors, and some capacitors.

As for the position, that'll depend on what year the computer was
manufactured in. There are a few different versions of the mother board so
the RAM will be in different places for each mother board version. One
board has the RAM under the keyboard, another has it up off to the mid-upper
-left, I think there is a third type.

To do the upgrade you need to solder chip sockets into the unfilled spaces on
the board. Solder in the resistors and capacitors in the right places, and
finally plug in your 16 256K DRAMS.

If you want deeper details just ask.

Later...

Tony,

The STfm has a builtin power supply so all you need is a standard power cable just like the ones used on PC's and a myriad of other equipment. (The only ST that had an external power supply was the original 520ST, which also had no internal drive and was noticably smaller than the STfm.

Well, that's a problem of TOS. When there's no IDE-drive attached, it will
use a very long timeout to accept this is true... You can't change the
length of this timeout with the NVRAM, you have to patch the ROMs. There's
a small utility available which does that (and other useful things for the
Falcon-TOS), but AFAIK it only works with 4.04, and, even worse, I can't
remember the name right now... But you could contact Michael_Ruge@wi2.maus.de
for details.

Ciao

Thomas

1815. FS:Digidesign Sound Tools for Mega ST

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-03 00:00:00 UTC
From: drichard@execpc.com
Message-ID: <3o6sfb$dct@homer.alpha.net>
Source record: 26434
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy

For Sale: Digidesign Sound Tools system for Atari Mega ST. Note, this system REQUIRES a Mega ST because the DSP board plugs directly onto the Mega ST's bus. I paid over $2000 for this system, and am asking $450 or best offer. It's in very good condition and comes with original manuals, etc. If you're unfamiliar with the system, here's what it does:

The Digidesign Sound Tools system is a hard disk digital audio recording, playback, and editing system. It can be used for mastering CD's, tapes, etc. or for editing digital audio. The system I'm selling consists of the following 3 components:

1) DAT I/O digital interface for doing direct digital audio I/O (entirely in digital domain) from DAT, Mini Disc, DCC, or a CD player that has digital output. It has both AES/EBU and S/P DIF ins/outs. This is a separate box with cable that plugs into the DSP processor described below.

2) The Sound Tools DSP, a Motorola 56001 DSP processor on a 'card' that plugs onto the Mega ST bus. This processor speeds up DSP functions, and allows things like realtime EQ during playback.

3) The Sound Designer II software. This is the software that drives the hardware described above. In addition to recording and playing back digital audio it includes cut and paste editing, scrub editing, EQ, waveform redraw, normalization, regions and playlists, fades and gain changes, smoothing, mixing of sound files, sample rate conversion, and time compression/expansion.

In addition to the components described above I also have final beta copies of the Digidesign MasterList software (For putting together a Master List of several songs with timing, blank space, etc. for a CD or tape).

If interested in this system please reply via Email to drichard@execpc.com.

Thanks,

Dean

SCSI may be faster under some OSs. It depends on the SCSI driver. AFAIK
the driver under Linux disconnects, if possible, so several SCSI disks
can be doing some work at the same time (e.g. target 0 could be seeking,
while target 1 is transferring a couple of sectors to the computer, and
target 2 is filling it's internal buffer). Therefor it is important to
spread partitions containing highly active filesystems (e.g. newsspool)
amongst several disks.

>

I got the same problem. Just installed a new Quantum 540Meg SCSI and much
to my horror found that it was MUCH slower than my old one despite having
half the access time and three times the data rate! I guess this is cos
the partitions/FATs are 3 times as big.

FATSPEED helps a lot, but i thought to try the ROMS (1.6) from my
daughter's STE. They wouldn't work - my STFM just sat and did zilch.
Anyone know why this should be? Are STE & STF ROMs different?

Re 16 Meg partition limit in 1.2, ICD's docs mention BGM partitions which
can be as big as a house (larger clusters i think). Has anyone tried
them with TOS 1.2?

I hope the following helps:

1) MK-II includes an upgraded 1 gigabyte hard disk drive that is
fast enough for direct-to-disk audio recording and deosn't
suffer from re-calibration problems (which cause "audio hiccups")

2) The input and output audio circuitry has been upgraded and the
built-in "bass-boost" removed.

3) This is only a rumour but I heard that as part of the license
agreements, Atari didn't want MK-II to compete with the original
Falcon while stocks of the original model continue

4) The guy that helped teh C-Lab/Atari deal come about works for a
UK music retailer called either the "Audio Village" or "Digital
Village" (can't recall the exact name) might be able to help.
I *think* his name is Paul Wiffen.

5) A new UK mag called "Atari World" should be doing a revue
soon.

Has anyone noticed how the MK-II adverts in Europe show the new
Falcon as the ideal companion for Cubase Audio? Could this be
because there is a teesy-weensy bit of bad blood between C-Lab
and their former employees who started up E-magic...

Anyway good luck with your Falcon

OK.
I'll try explain my problem again.

I need Polish characters in my printouts made in character mode.
(In graphic mode I can use Calamus). It can be done in two ways:
-by fitting an EPROM chip with new character set into my printer
(it's expensive) or
-by downloading set of fonts (only Polish characters) into the printer
after every switch on.
For my 9-pin printer I've choosen the second way (much cheaper)
and it works. Now I want to do the same for my BubbleJet. So, what I
need from all of You, is a piece of software, that downloads _ANY_
characters to printer BJ. I'll analyse it and will make my own downloads.
I'm not sure, is GDOS capable of doing it (BTW: I do use GDOS software: a new
Idealist!).
So, thanks for You help in advance

>but it seems a high price to pay if it's not a lot better...

New OS - No, 4.04 still.
Better CPU - No, 16 MHz '030

What is does have is 14 Mb RAM and 500 MB SCSI inside. All the fixes
needed to make it work with some sampler prgs have been done.

It's too expensive, you could probably get it cheaper as an Atari Falcon
and add the extras.

Phil.

STFM's have an internal supply, you will of course need a power lead -
standard Euro plug to 3 pin mains, this should come with the computer.

1829. MiNTnet & Geneva?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-04 00:00:00 UTC
From: DOMINGO@news.delphi.com
Message-ID: <3oa1p0$ipq@news2.delphi.com>
Source record: 26448
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I already have Geneva. Should I get MiNTnet? What else do I need to set up an Internet connection?

I am new at this (SLIP/PPP/etc.), but not new to computing/telecomputing. Are the available Lynx and Chimera programs GEM based or .TOS based?

Please point me in the right direction on how to do this and where to get everything. I.e. what files at umich, etc.

Thanks in advance!

Dom

P.S. Since most people feel that AES4.0/MultiTOS is so slow, I figure Geneva/MiNTnet should be pretty speedy.

1830. Atari audio questions

Newsgroup: comp.sys.atari.st.tech

Could someone please give me information on Atari computers???

I know next to nothing about the models and their audio capabilities but
would like to find out!!

What connections are on each model? (such as midi, audio in\out, etc.)
Which models have a built in DSP?

Also,

What digital audio recording hardware\software is available for the Atari?

I would appreciate any info. Thanks.

Dunno about that, but

>Why did Atari never ever took Kaos to court....???

is very simple to answer. The commercially distributed KAOS 1.4.2 _required_ a
TOS 1.04 in ROMs. And in Germany it is perfectly legal to patch or modify any
software, as long as it is only for ones own use. Not for distribution!

I remember the CeBIT perfectly well, when KAOS 1.4.2 was announced. Normen
Kowalewski went BEZERK after he heard the news ;-)

I think this and "MiNT-net doesn't need megs of programs and a degree in
Unix administration to install" should be posted daily to c.s.a.s(.t) ;-)

> GEM based browser that used MiNT-net & have it run under single tasking
I have heard so many plans for writing of a MiNTnet + GEM based WWW browser
one of them must come to fruition soon.

> GEM just as well. If someone compiles the MiNT-net & MiNTlibs libraries
> for Lattice C, I'll do it my bloody self just to prove a point (bet it would
> be fairly easy if you poach the actual http code from chimera or Lynx).
I was going to ask about that myself today. I know the MiNTlibs have been
ported but I don't think socket.lib has. I compiled it myself yesterday but
I had to cludge my way through one of the headers (containing char bitfields)
and I can't be sure I have got it right. The other problem is that socket
calls mintlib calls (ioctl etc) and I don't have a working MiNTlib so I have
to wait until I feel I can afford to go on anoother FTPing trip...

> Another approach is to take the TCP/IP code from KA9Q / NOS and bolt a GEM
> shell onto it....you will still need to implement http on top of that though,
> the MiNT-net way is easier to code.
Please please everyone writing TCP/IP stuff support MiNTnet. It isn't hard
for a user to install and it has so many advantages to the end user (like
compatability between inet apps).

> Craig.
> (Who doesn't really care, 'coz he has Chimera running fine under MiNT-X+Fvwm)
And who surely has >4 Megs :-) If not, please tell me how you've managed to
squeeze it in! I can run it all but I have virtually no memory left for
pages and file transfers if I do.

1833. PLCC wire-wrap sockets????

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-04 00:00:00 UTC
From: hallvart@oslonett.no
Message-ID: <3obig2$b23@hasle.oslonett.no>
Source record: 26452

I'm not sure if I've asked this before- forgive me if I have.

The problem is finding a suitable socket that will let me "sandwich"
a new circuit board with connections to the PLCC shaped 68000
processor in my STE and put the 68000 on top of the circuit board.

In other words, the 68000 connects to the same IC socket as before, but
in addition, a new PCB comes between.
How do i solve this problem?
I've been looking through lots of catalogues for a suitable socket
but with no luck so far, i don't even know what to look for (a PLCC wire
wrap socket???)
Any ideas?
And in case you're wondering what I'm going to make... an IDE hard disk
interface.
Thanks.

Hallvard

> TOS 1.2, if you did you would not post a supid reply like that...

What are all the bugs then?

Sure, I've seen a list and there are a lot, BUT, when it comes to my
everyday normal use then it's FATSPEED, folder fix, serial fix and that's
it.

> TOS 1.2 is not supported in many new programs, it has to many bugs and lacks
> to many new features...

1.4 doesn't add much functionality over 1.2 AFAIK, not program feature wise.

> But then again you seem to know it all, and those people are beyond help...

Really, so where did I state I know everything?

So it comes down to insults now does it.

Source record: 26456

I couldn't get MacPPP to work with Spectre: something about a modem
signal which Spectre doesn't implement because the Mac+ didn't have it.
I also can't get the latest MacCIM -- the one you need to ftp and gopher
via CIS -- to run, it always complains I don't have enough memory. The
previous version worked fine (but didn't have the internet stuff).

Currently I'm using KA9Q-NOS with a dialler script which logs onto CIS
with GO:PPPCONNECT; works, but no graphical interface. One day I'll
get MintNet and X running (but maybe not this year).

Valid question, it does seem a little high in the price stakes - but
they aren't making base models at all, the high price for their standard
model gets you a fully loaded machine. They've ditched the IDE,
and have a 500Meg internal SCSI drive and 14Meg memory, so that accounts
for some of the price differance (but not all of it by any stretch of the
imagination). I think they are aiming more at studios & music pro's who
want a digital mixing set up, where a mac or PC expanded to perform the
same stuff as the falcon will out of the box, will cost more than they
are asking for the falcon - making it seem value for money - and with
the advantage of not having to fart around with DOS/windows to get
it to work.

Buy DevpacDSP from HiSoft - it's quite cheap and pretty good.

1840. Re: File transfer from ST to PC?

Newsgroup: comp.sys.atari.st.tech
Date: 1995-05-05 00:00:00 UTC
From: gjones@cs.man.ac.uk
Message-ID: <3ocu76$6s0@m1.cs.man.ac.uk>
Source record: 26459

Sometimes I've found my ST discs will read on a PC, but this isn't
particularly reliable. Far better is to format your discs on a PC
and use them as normal. The ST will happily read the PC formatted
disc without any problems as though it was a normal ST disc.
There always seems to be a file entitled 'PC' which is 0 bytes
on the disc as well. This is (I think) because of the way the PC
formats the disc and places an identifier on it.
